LECTURE I.—SESAME.

OF KINGS' TREASURIES.

“You shall each have a cake of sesame,—and ten pound.”

LUCIAN : *The Fisherman.*

I BELIEVE, ladies and gentlemen, that my first duty this evening is to ask your pardon for the ambiguity of title under which the subject of lecture has been announced, and for having endeavoured, as you may ultimately think, to obtain your audience under false pretences. For indeed I am not going to talk of kings, known as regnant, nor of treasuries, understood to contain wealth ; but of quite another order of royalty, and material of riches, than those usually acknowledged. And I had even intended to ask your attention for a little while on trust, and (as sometimes one contrives in taking a friend to see a favourite piece of scenery) to hide what I wanted most to show, with such imperfect cunning as I might, until we had unexpectedly reached the best point of view by winding paths. But since my good plain-spoken

friend, Canon Anson, has already partly anticipated my reserved "trot for the avenue" in his first advertised title of subject, "How and What to Read";—and as also I have heard it said, by men practised in public address, that hearers are never so much fatigued as by the endeavour to follow a speaker who gives them no clue to his purpose, I will take the slight mask off at once, and tell you plainly that I want to speak to you about books; and about the way we read them, and could, or should read them. A grave subject, you will say; and a wide one! Yes; so wide that I shall make no effort to touch the compass of it. I will try only to bring before you a few simple thoughts about reading, which press themselves upon me every day more deeply, as I watch the course of the public mind with respect to our daily enlarging means of education, and the answeringly wider spreading, on the levels, of the irrigation of literature.

It happens that I have practically some connection with schools for different classes of youth; and I receive many letters from parents respecting the education of their children. In the mass of these letters, I am always struck by the precedence

which the idea of a "position in life" takes above all other thoughts in the parents'—more especially in the mothers'—minds. "The education befitting such and such a *station in life*"—this is the phrase, this is the object, always. They never seek, as far as I can make out, an education good in itself: the conception of abstract rightness in training rarely seems reached by the writers. But an education "which shall keep a good coat on my son's back;—an education which shall enable him to ring with confidence the visitors' bell at double-belled doors,—education which shall result ultimately in establishment of a double-belled door to his own house; in a word, which shall lead to advancement in life." It never seems to occur to the parents that there may be an education which in itself is advancement in Life; that any other than that may perhaps be advancement in Death; and that this essential education might be more easily got, or given, than they fancy if they set about it in the right way; while it is for no price, and by no favour, to be got, if they set about it in the wrong.

Indeed, among the ideas most prevalent and effective in the mind of this busiest of countries,

I suppose the first—at least that which is confessed with the greatest frankness, and put forward as the fittest stimulus to youthful exertion—is this of “Advancement in Life.” My main purpose this evening is to determine, with you, what this idea practically includes, and what it should include.

Practically, then, at present, “advancement in life” means becoming conspicuous in life; obtaining a position which shall be acknowledged by others to be respectable or honourable. We do not understand by this advancement, in general, the mere making of money, but the being known to have made it; not the accomplishment of any great aim, but the being seen to have accomplished it. In a word, we mean the gratification of our thirst for applause. That thirst, if the last infirmity of noble minds, is also the first infirmity of weak ones; and, on the whole, the strongest impulsive influence of average humanity. The greatest efforts of the race have always been traceable to the love of praise, as its greatest catastrophes to the love of pleasure.

I am not about to attack or defend this impulse. I want you only to feel how it lies at the root of

effort, especially of all modern effort. It is the gratification of vanity which is, with us, the stimulus of toil, and balm of repose; so closely does it touch the very springs of life, that the wounding of our vanity is always spoken of (and truly) as in its measure *mortal*; we call it "mortification," using the same expression which we should apply to a gangrenous and incurable bodily hurt. And although few of us may be physicians enough to recognise the various effect of this passion upon health and energy, I believe most honest men know and would at once acknowledge its leading power with them as a motive. The seaman does not commonly desire to be made captain only because he knows he can manage the ship better than any other sailor on board. He wants to be made captain that he may be *called* captain. The clergyman does not usually want to be made a bishop only because he believes that no other hand can, as firmly as his, direct the diocese through its difficulties. He wants to be made bishop primarily that he may be called "My Lord." And a prince does not usually desire to enlarge, or a subject to gain, a kingdom because he believes that no one else

can as well serve the state upon the throne, but, briefly, because he wishes to be addressed as "Your Majesty," by as many lips as may be brought to such utterance.

This, then, being the main idea of advancement in life, the force of it applies, for all of us, according to our station, particularly to that secondary result of such advancement which we call "getting into good society." We want to get into good society, not that we may have it, but that we may be seen in it; and our notion of its goodness depends primarily on its conspicuousness.

Will you pardon me if I pause for a moment to put what I fear you may think an impertinent question? I never can go on with an address unless I feel, or know, that my audience are either with me or against me: (I do not much care which, in beginning;) but I must know where they are; and I would fain find out, at this instant, whether you think I am putting the motives of popular action too low. I am resolved to-night, to state them low enough to be admitted as probable; for whenever, in my writings on Political Economy, I assume that a little honesty,

or generosity, — or what used to be called “virtue”—may be calculated upon as a human motive of action, people always answer me, saying, “You must not calculate on that: that is not in human nature: you must not assume anything to be common to men but acquisitiveness and jealousy; no other feeling ever has influence on them, except accidentally, and in matters out of the way of business.” I begin accordingly, to-night, low down in the scale of motives; but I must know if you think me right in doing so. Therefore, let me ask those who admit the love of praise to be usually the strongest motive in men’s minds in seeking advancement, and the honest desire of doing any kind of duty to be an entirely secondary one, to hold up their hands. (*About a dozen of hands held up—the audience partly not being sure the lecturer is serious, and partly shy of expressing opinion.*) I am quite serious—I really do want to know what you think; however, I can judge by putting the reverse question. Will those who think that duty is generally the first, and love of praise the second motive, hold up their hands? (*One hand reported to have been held up, behind the lecturer.*)

Very good : I see you are with me, and that you think I have not begun too near the ground. Now, without teasing you by putting further question, I venture to assume that you will admit duty as at least a secondary or tertiary motive. You think that the desire of doing something useful, or obtaining some real good, is indeed an existent collateral idea, though a secondary one, in most men's desire of advancement. You will grant that moderately honest men desire place and office, at least in some measure for the sake of their beneficent power ; and would wish to associate rather with sensible and well-informed persons than with fools and ignorant persons, whether they are seen in the company of the sensible ones or not. And finally, without being troubled by repetition of any common truisms about the preciousness of friends, and the influence of companions, you will admit, doubtless, that, according to the sincerity of our desire that our friends may be true, and our companions wise,—and in proportion to the earnestness and discretion with which we choose both, will be the general chances of our happiness and usefulness.

But, granting that we had both the will and the sense to choose our friends well, how few of us have the power! or, at least, how limited, for most, is the sphere of choice! Nearly all our associations are determined by chance or necessity; and restricted within a narrow circle. We cannot know whom we would; and those whom we know, we cannot have at our side when we most need them. All the higher circles of human intelligence are, to those beneath, only momentarily and partially open. We may, by good fortune, obtain a glimpse of a great poet, and hear the sound of his voice; or put a question to a man of science, and be answered good-humouredly. We may intrude ten minutes' talk on a cabinet minister, answered probably with words worse than silence, being deceptive; or snatch, once or twice in our lives, the privilege of throwing a bouquet in the path of a Princess, or arresting the kind glance of a Queen. And yet these momentary chances we covet; and spend our years, and passions, and powers in pursuit of little more than these; while, meantime, there is a society continually open to us, of people who will talk to us as long as we like,

whatever our rank or occupation ;—talk to us in the best words they can choose, and with thanks if we listen to them. And this society, because it is so numerous and so gentle,—and can be kept waiting round us all day long, not to grant audience, but to gain it ;—kings and statesmen lingering patiently in those plainly furnished and narrow ante-rooms, our bookcase shelves,—we make no account of that company,—perhaps never listen to a word they would say, all day long !

You may tell me, perhaps, or think within yourselves, that the apathy with which we regard this company of the noble, who are praying us to listen to them, and the passion with which we pursue the company, probably of the ignoble, who despise us, or who have nothing to teach us, are grounded in this,—that we can see the faces of the living men, and it is themselves, and not their sayings, with which we desire to become familiar. But it is not so. Suppose you never were to see their faces ;—suppose you could be put behind a screen in the statesman's cabinet, or the prince's chamber, would you not be glad to listen to their words, though you were forbidden to advance beyond the screen? And

when the screen is only a little less, folded in two, instead of four, and you can be hidden behind the cover of the two boards that bind a book, and listen, all day long, not to the casual talk, but to the studied, determined, chosen addresses of the wisest of men ;—this station of audience, and honourable privy council you despise !

But perhaps you will say that it is because the living people talk of things that are passing, and are of immediate interest to you, that you desire to hear them. Nay ; that cannot be so, for the living people will themselves tell you about passing matters, much better in their writings than in their careless talk. But I admit that this motive does influence you, so far as you prefer those rapid and ephemeral writings to slow and enduring writings—books, properly so called. For all books are divisible into two classes, the books of the hour, and the books of all time. Mark this distinction—it is not one of quality only. It is not merely the bad book that does not last, and the good one that does. It is a distinction of species. There are good books for the hour, and good ones for all time ; bad books for the hour, and bad ones for all

time. I must define the two kinds before I go further.

The good book of the hour, then,—I do not speak of the bad ones—is simply the useful or pleasant talk of some person whom you cannot otherwise converse with, printed for you. Very useful often, telling you what you need to know; very pleasant often, as a sensible friend's present talk would be. These bright accounts of travels; good-humoured and witty discussions of question; lively or pathetic story-telling in the form of novel; firm fact-telling, by the real agents concerned in the events of passing history;—all these books of the hour, multiplying among us as education becomes more general, are a peculiar characteristic and possession of the present age: we ought to be entirely thankful for them, and entirely ashamed of ourselves if we make no good use of them. But we make the worst possible use, if we allow them to usurp the place of true books: for, strictly speaking, they are not books at all, but merely letters or newspapers in good print. Our friend's letter may be delightful, or necessary, to-day: whether worth keeping or not, is to be considered. The newspaper may be

entirely proper at breakfast time, but assuredly it is not reading for all day. So, though bound up in a volume, the long letter which gives you so pleasant an account of the inns, and roads, and weather last year at such a place, or which tells you that amusing story, or gives you the real circumstances of such and such events, however valuable for occasional reference, may not be, in the real sense of the word, a "book" at all, nor, in the real sense, to be "read." A book is essentially not a talked thing, but a written thing; and written, not with the view of mere communication, but of permanence. The book of talk is printed only because its author cannot speak to thousands of people at once; if he could, he would—the volume is mere *multiplication* of his voice. You cannot talk to your friend in India; if you could, you would; you write instead: that is mere *conveyance* of voice. But a book is written, not to multiply the voice merely, not to carry it merely, but to preserve it. The author has something to say which he perceives to be true and useful, or helpfully beautiful. So far as he knows, no one has yet said it; so far as he knows, no one else can say it. He is bound

to say it, clearly and melodiously if he may; clearly, at all events. In the sum of his life he finds this to be the thing, or group of things, manifest to him;—this the piece of true knowledge, or sight which his share of sunshine and earth has permitted him to seize. He would fain set it down for ever; engrave it on rock, if he could: saying, “This is best of me; for the rest, I ate, and drank, and slept, loved, and hated, like another: my life was as the vapour, and is not; but this I saw and knew; this, if anything of mine, is worth your memory.” That is his “writing”; it is, in his small human way, and with whatever degree of true inspiration is in him, his inscription, or scripture. That is a “Book.”

Perhaps you think no books were ever so written?

But, again, I ask you, do you at all believe in honesty, or at all in kindness? or do you think there is never any honesty or benevolence in wise people? None of us, I hope, are so unhappy as to think that. Well, whatever bit of a wise man’s work is honestly and benevolently done, that bit is his book or his piece of

art.* It is mixed always with evil fragments—ill-done, redundant, affected work. But if you read rightly, you will easily discover the true bits, and those *are* the book.

Now, books of this kind have been written in all ages by their greatest men ;—by great leaders, great statesmen, and great thinkers. These are all at your choice ; and life is short. You have heard as much before ;—yet have you measured and mapped out this short life and its possibilities? Do you know, if you read this, that you cannot read that—that what you lose to-day you cannot gain to-morrow? Will you go and gossip with your housemaid, or your stable-boy, when you may talk with queens and kings ; or flatter yourselves that it is with any worthy consciousness of your own claims to respect that you jostle with the common crowd for *entrée* here and audience there, when all the while this eternal court is open to you, with its society wide as the world, multitudinous as its days, the chosen, and the mighty, of every place and time? Into that you may enter always ; in that you may

* Note this sentence carefully, and compare the *Queen of the Air*, § 106.

take fellowship and rank according to your wish ; from that, once entered into it, you can never be outcast but by your own fault ; by your aristocracy of companionship, there, your own inherent aristocracy will be assuredly tested, and the motives with which you strive to take high place in the society of the living, measured, as to all the truth and sincerity that are in them, by the place you desire to take in this company of the Dead.

“The place you desire,” and the place you *fit yourself for*, I must also say ; because, observe, this court of the past differs from all living aristocracy in this :—it is open to labour and to merit, but to nothing else. No wealth will bribe, no name overawe, no artifice deceive, the guardian of those Elysian gates. In the deep sense, no vile or vulgar person ever enters there. At the portières of that silent Faubourg St. Germain, there is but brief question, “Do you deserve to enter?” “Pass. Do you ask to be the companion of nobles? Make yourself noble, and you shall be. Do you long for the conversation of the wise? Learn to understand it, and you shall hear it. But on other terms?—no. If

you will not rise to us, we cannot stoop to you. The living lord may assume courtesy, the living philosopher explain his thought to you with considerate pain; but here we neither feign or interpret; you must rise to the level of our thoughts if you would be gladdened by them, and share our feelings, if you would recognise our presence."

This, then, is what you have to do, and I admit that it is much. You must, in a word, love these people, if you are to be among them. No ambition is of any use. They scorn your ambition. You must love them, and show your love in these two following ways.

I. First, by a true desire to be taught by them, and to enter into their thoughts. To enter into theirs, observe; not to find your own expressed by them. If the person who wrote the book is not wiser than you, you need not read it; if he be, he will think differently from you in many respects.

Very ready we are to say of a book, "How good this is—that's exactly what I think!" But the right feeling is, "How strange that is! I

never thought of that before, and yet I see it is true; or if I do not now, I hope I shall, some day." But whether thus submissively or not, at least be sure that you go to the author to get at *his* meaning, not to find yours. Judge it afterwards, if you think yourself qualified to do so, but ascertain it first. And be sure also, if the author is worth anything, that you will not get at his meaning all at once;—nay, that at his whole meaning you will not for a long time arrive in any wise. Not that he does not say what he means and in strong words too; but he cannot say it all; and what is more strange, will not, but in a hidden way and in parables, in order that he may be sure you want it. I cannot quite see the reason of this, nor analyse that cruel reticence in the breasts of wise men which makes them always hide their deeper thought. They do not give it you by way of help, but of reward, and will make themselves sure that you deserve it before they allow you to reach it. But it is the same with the physical type of wisdom, gold. There seems, to you and me, no reason why the electric forces of the earth should not carry whatever there is of gold within it at once

to the mountain-tops, so that kings and people might know that all the gold they could get was there ; and without any trouble of digging, or anxiety, or chance, or waste of time, cut it away, and coin as much as they needed. But Nature does not manage it so. She puts it in little fissures in the earth, nobody knows where ; you may dig long and find none ; you must dig painfully to find any.

And it is just the same with men's best wisdom. When you come to a good book, you must ask yourself, " Am I inclined to work as an Australian miner would ? Are my pick-axes and shovels in good order, and am I in good trim myself, my sleeves well up to the elbow, and my breath good, and my temper ? " And, keeping the figure a little longer, even at cost of tiresomeness, for **it is** a thoroughly useful one, the metal you are in search of being the author's mind or meaning, his words are as the rock which you have to crush and smelt in order to get at it. And your pick-axes are your own care, wit, and learning ; your smelting furnace is your own thoughtful soul. Do not hope to get at any good author's meaning without those tools and that fire ; often you will

need sharpest, finest chiselling, and patientest fusing, before you can gather one grain of the metal.

And, therefore, first of all, I tell you earnestly and authoritatively (I *know* I am right in this), you must get into the habit of looking intensely at words, and assuring yourself of their meaning, syllable by syllable—nay, letter by letter. For though it is only by reason of the opposition of letters in the function of signs, to sounds in function of signs, that the study of books is called “literature,” and that a man versed in it is called, by the consent of nations, a man of letters, instead of a man of books, or of words, you may yet connect with that accidental nomenclature this real principle;—that you might read all the books in the British Museum (if you could live long enough), and remain an utterly “illiterate,” uneducated person; but that if you read ten pages of a good book, letter by letter,—that is to say, with real accuracy,—you are for evermore in some measure an educated person. The entire difference between education and non-education (as regards the merely intellectual part of it) consists in this accuracy. A well-educated gentleman

may not know many languages, may not be able to speak any but his own, may have read very few books. But whatever language he knows, he knows precisely: whatever word he pronounces he pronounces rightly: above all he is learned in the *peerage* of words; knows the words of true descent and ancient blood, at a glance, from words of modern canaille; remembers all their ancestry—their intermarriages, distantest relationships, and the extent to which they were admitted, and offices they held, among the national noblesse of words at any time, and in any country. But an uneducated person may know by memory any number of languages, and talk them all, and yet truly know not a word of any,—not a word even of his own. An ordinarily clever and sensible seaman will be able to make his way ashore at most ports; yet he has only to speak a sentence of any language to be known for an illiterate person; so also the accent, or turn of expression of a single sentence will at once mark a scholar. And this is so strongly felt, so conclusively admitted by educated persons, that a false accent or a mistaken syllable is enough, in the parliament of any civilised nation, to assign

to a man a certain degree of inferior standing for ever.

And this is right; but it is a pity that the accuracy insisted on is not greater, and required to a serious purpose. It is right that a false Latin quantity should excite a smile in the House of Commons; but it is wrong that a false English meaning should *not* excite a frown there. Let the accent of words be watched, by all means, but let their meaning be watched more closely still, and fewer will do the work. A few words well chosen and well distinguished will do work that a thousand cannot, when every one is acting, equivocally, in the function of another. Yes; and words, if they are not watched, will do deadly work sometimes. There are masked words droning and skulking about us in Europe just now—(there never were so many, owing to the spread of a shallow, blotching, blundering, infectious “information,” or rather deformation, everywhere, and to the teaching of catechisms and phrases at schools instead of human meanings)—there are masked words abroad, I say, which nobody understands, but which everybody uses, and most people will also fight for, live for,

or even die for, fancying they mean this, or that, or the other, of things dear to them : for such words wear chameleon cloaks — “groundlion” cloaks, of the colour of the ground of any man’s fancy : on that ground they lie in wait, and rend him with a spring from it. There were never creatures of prey so mischievous, never diplomats so cunning, never poisoners so deadly, as these masked words ; they are the unjust stewards of all men’s ideas : whatever fancy or favourite instinct a man most cherishes, he gives to his favourite masked word to take care of for him ; the word at last comes to have an infinite power over him, you cannot get at him by its ministry.

And in languages so mongrel in breed as the English, there is a fatal power of equivocation put into men’s hands, almost whether they will or no, in being able to use Greek or Latin forms for a word when they want it to be respectable, and Saxon or otherwise common forms when they want to discredit it. What a singular and salutary effect, for instance, would be produced on the minds of people who are in the habit of taking the Form of the words they live by, for

the Power of which those words tell them, if we always either retained, or refused, the Greek form "biblos," or "biblion," as the right expression for "book"—instead of employing it only in the one instance in which we wish to give dignity to the idea, and translating it everywhere else. How wholesome it would be for the many simple persons who worship the Letter of God's Word instead of its Spirit (just as other idolaters worship His picture instead of His presence), if, in such places (for instance as Acts xix. 19), we retained the Greek expression, instead of translating it, and they had to read, "Many of them also which used curious arts, brought their bibles together, and burnt them before all men; and they counted the price of them, and found it fifty thousand pieces of silver!" Or if, on the other hand, we translated instead of retaining it, and always spoke of the "Holy Book," instead of "Holy Bible," it might come into more heads than it does at present that the Word of God, by which the heavens were, of old, and by which they are now kept in store,* cannot be made a present of to anybody in morocco

* 2 Peter iii. 5-7.

binding; nor sown on any wayside by help either of steam-plough or steam-press; but is nevertheless being offered to us daily, and by us with contumely refused; and sown in us daily, and by us as instantly as may be, choked.

So, again, consider what effect has been produced on the English vulgar mind by the use of the sonorous Latin form "damno," in translating the Greek *κατακρίνω*, when people charitably wish to make it forcible; and the substitution of the temperate "condemn" for it, when they choose to keep it gentle. And what notable sermons have been preached by illiterate clergymen on—"He that believeth not shall be damned"; though they would shrink with horror from translating Heb. xi. 7, "The saving of his house, by which he damned the world," or John viii. 12, "Woman, hath no man damned thee? She saith, No man, Lord. Jesus answered her, Neither do I damn thee; go and sin no more." And divisions in the mind of Europe, which have cost seas of blood, and in the defence of which the noblest souls of men have been cast away in frantic desolation, countless as forest leaves—

though, in the heart of them, founded on deeper causes—have nevertheless been rendered practically possible, mainly, by the European adoption of the Greek word for a public meeting, to give peculiar respectability to such meetings, when held for religious purposes ; and other collateral equivocations, such as the vulgar English one of using the word “priest” as a contraction for “presbyter.”

Now, in order to deal with words rightly, this is the habit you must form. Nearly every word in your language has been first a word of some other language—of Saxon, German, French, Latin, or Greek ; (not to speak of eastern and primitive dialects). And many words have been all these ;—that is to say, have been Greek first, Latin next, French or German next, and English last : undergoing a certain change of sense and use on the lips of each nation ; but retaining a deep vital meaning which all good scholars feel in employing them, even at this day. If you do not know the Greek alphabet, learn it ; young or old—girl or boy—whoever you may be, if you think of reading seriously (which, of course, implies that you have some leisure at command),

learn your Greek alphabet; then get good dictionaries of all these languages, and whenever you are in doubt about a word, hunt it down patiently. Read Max Müller's lectures thoroughly, to begin with; and, after that, never let a word escape you that looks suspicious. It is severe work; but you will find it, even at first, interesting, and at last, endlessly amusing. And the general gain to your character, in power and precision, will be quite incalculable.

Mind, this does not imply knowing, or trying to know, Greek, or Latin, or French. It takes a whole life to learn any language perfectly. But you can easily ascertain the meanings through which the English word has passed; and those which in a good writer's work it must still bear.

And now, merely for example's sake, I will, with your permission, read a few lines of a true book with you, carefully; and see what will come out of them. I will take a book perfectly known to you all. No English words are more familiar to us, yet nothing perhaps has been less read with sincerity. I will take these few following lines of Lycidas:

Last came, and last did go,
 The pilot of the Galilean lake ;
 Two massy keys he bore of metals twain,
 (The golden opes, the iron shuts amain),
 He shook his mitred locks, and stern bespake,
 How well could I have spar'd for thee, young swain,
 Enow of such as for their bellies' sake
 Creep and intrude, and climb into the fold !
 Of other care they little reckoning make,
 Than how to scramble at the shearers' feast,
 And shove away the worthy bidden guest ;
 Blind mouths ! that scarce themselves know how to
 hold
 A sheep-hook, or have learn'd aught else, the least
 That to the faithful herdsman's art belongs !
 What recks it them? What need they? They are sped :
 And when they list, their lean and flashy songs
 Grate on their scrannel pipes of wretched straw ;
 The hungry sheep look up, and are not fed,
 But swoln with wind, and the rank mist they draw,
 Rot inwardly, and foul contagion spread ;
 Besides what the grim wolf with privy paw
 Daily devours apace, and nothing said.

Let us think over this passage, and examine its words.

First, is it not singular to find Milton assigning to St. Peter, not only his full episcopal function, but the very types of it which Protestants usually refuse most passionately? His "mitred" locks! Milton was no Bishop-lover; how comes St. Peter to be "mitred"? "Two massy keys he bore." Is this, then, the power of the keys claimed by the Bishops of Rome, and is it acknowledged here by Milton only in a poetical licence, for the sake of its picturesqueness, that he may get the gleam of the golden keys to help his effect? Do not think it. Great men do not play stage tricks with the doctrines of life and death: only little men do that. Milton means what he says; and means it with his might too—is going to put the whole strength of his spirit presently into the saying of it. For though not a lover of false bishops, he *was* a lover of true ones; and the Lake pilot is here, in his thoughts, the type and head of true episcopal power. For Milton reads that text, "I will give unto thee the keys of the kingdom of Heaven" quite honestly. Puritan though he be, he would not blot it out of the book because there have been bad bishops; nay, in order to understand him, we must under-

stand that verse first ; it will not do to eye it askance, or whisper it under our breath, as if it were a weapon of an adverse sect. It is a solemn, universal assertion, deeply to be kept in mind by all sects. But perhaps we shall be better able to reason on it if we go on a little farther, and come back to it. For clearly, this marked insistence on the power of the true episcopate is to make us feel more weightily what is to be charged against the false claimants of episcopate ; or generally, against false claimants of power and rank in the body of the clergy ; they who “for their bellies’ sake, creep, and intrude, and climb into the fold.”

Do not think Milton uses those three words to fill up his verse, as a loose writer would. He needs all the three ; especially those three, and no more than those—“creep,” and “intrude,” and “climb” ; no other words would or could serve the turn, and no more could be added. For they exhaustively comprehend the three classes, correspondent to the three characters, of men who dishonestly seek ecclesiastical power. First, those who “*creep*” into the fold ; who do not care for office, nor name, but for secret influence, and do all things occultly and cunningly,

consenting to any servility of office or conduct, so only that they may intimately discern, and un-awares direct, the minds of men. Then those who "intrude" (thrust, that is) themselves into the fold, who by natural insolence of heart, and stout eloquence of tongue, and fearlessly perseverant self-assertion, obtain hearing and authority with the common crowd. Lastly, those who "climb," who, by labour and learning, both stout and sound, but selfishly exerted in the cause of their own ambition, gain high dignities and authorities, and become "lords over the heritage," though not "ensamples to the flock."

Now go on:—

Of other care they little reckoning make
Than how to scramble at the shearers' feast.

Blind mouths—

I pause again, for this is a strange expression ; a broken metaphor, one might think, careless and unscholarly.

Not so: its very audacity and pithiness are intended to make us look close at the phrase and remember it. Those two monosyllables express the precisely accurate contraries of right character,

in the two great offices of the Church—those of bishop and pastor.

A Bishop means a person who sees.

A Pastor means one who feeds.

The most unbishoply character a man can have is, therefore, to be Blind.

The most unpastoral is, instead of feeding, to want to be fed,—to be a Mouth.

Take the two reverses together, and you have “blind mouths.” We may advisedly follow out this idea a little. Nearly all the evils in the Church have arisen from bishops desiring *power* more than *light*. They want authority, not outlook. Whereas their real office is not to rule; though it may be vigorously to exhort and rebuke; it is the king’s office to rule; the bishop’s office is to *oversee* the flock; to number it sheep by sheep; to be ready always to give full account of it. Now it is clear he cannot give account of the souls, if he has not so much as numbered the bodies of his flock. The first thing, therefore, that a bishop has to do is at least to put himself in a position in which, at any moment, he can obtain the history from childhood of every living soul in his diocese, and of its

present state. Down in that back street, Bill, and Nancy, knocking each other's teeth out!— Does the bishop know all about it? Has he his eye upon them? Has he *had* his eye upon them? Can he circumstantially explain to us how Bill got into the habit of beating Nancy about the head? If he cannot, he is no bishop, though he had a mitre as high as Salisbury steeple; he is no bishop,—he has sought to be at the helm instead of the masthead; he has no sight of things. “Nay,” you say, “it is not his duty to look after Bill in the back street.” What! the fat sheep that have full fleeces—you think it is only those he should look after, while (go back to your Milton) “the hungry sheep look up, and are not fed, besides what the grim wolf, with privy paw” (bishops knowing nothing about it) “daily devours apace, and nothing said?”

“But that's not our idea of a bishop.”* Perhaps not; but it was St. Paul's; and it was Milton's. They may be right, or we may be; but we must not think we are reading either one or the other by putting our meaning into their words.

* Compare the 13th Letter in *Time and Tide*.

I go on.

But, swoln with wind, and the rank mist they draw.

This is to meet the vulgar answer that "if the poor are not looked after in their bodies, they are in their souls; they have spiritual food."

And Milton says: "They have no such thing as spiritual food; they are only swollen with wind." At first you may think that is a coarse type, and an obscure one. But again, it is a quite literally accurate one. Take up your Latin and Greek dictionaries, and find out the meaning of "Spirit." It is only a contraction of the Latin word "breath," and an indistinct translation of the Greek word for "wind." The same word is used in writing, "The wind bloweth where it listeth"; and in writing, "So is every one that is born of the Spirit"; born of the *breath*, that is; for it means the breath of God, in soul and body. We have the true sense of it in our words "inspiration" and "expire." Now, there are two kinds of breath with which the flock may be filled; God's breath, and man's. The breath of God is health, and life, and peace to them, as the air of heaven is to the flocks on the hills; but

man's breath—the word which *he* calls spiritual,—is disease and contagion to them, as the fog of the fen. They rot inwardly with it; they are puffed up by it, as a dead body by the vapours of its own decomposition. This is literally true of all false religious teaching; the first, and last, and fatalest sign of it is that “puffing up.” Your converted children, who teach their parents; your converted convicts who teach honest men; your converted dunces, who, having lived in cretinous stupefaction half their lives, suddenly awaking to the fact of there being a God, fancy themselves therefore His peculiar people and messengers; your sectarians of every species, small and great, Catholic or Protestant, of high church or low, in so far as they think themselves exclusively in the right and others wrong; and pre-eminently, in every sect, those who hold that men can be saved by thinking rightly instead of doing rightly, by word instead of act, and wish instead of work:—these are the true fog children—clouds, these, without water; bodies, these, of putrescent vapour and skin, without blood or flesh: blown bag-pipes for the fiends to pipe with—corrupt, and corrupting,—“Swollen with wind, and the rank mist they draw.”

Lastly, let us return to the lines respecting the power of the keys, for now we can understand them. Note the difference between Milton and Dante in their interpretation of this power; for once the latter is weaker in thought; he supposes *both* the keys to be of the gate of heaven; one is of gold, the other of silver: they are given by St. Peter to the sentinel angel; and it is not easy to determine the meaning either of the substances of the three steps of the gate, or of the two keys. But Milton makes one, of gold, the key of heaven; the other, of iron, the key of the prison, in which the wicked teachers are to be bound who "have taken away the key of knowledge, yet entered not in themselves."

We have seen that the duties of bishop and pastor are to see, and feed; and, of all who do so, it is said, "He that watereth, shall be watered also himself." But the reverse is truth also. He that watereth not, shall be *withered* himself, and he that seeth not, shall himself be shut out of sight, — shut into the perpetual prison-house. And that prison opens here, as well as hereafter: he who is to be bound in heaven must first be bound on earth. That command to the strong

angels, of which the rock-apostle is the image, "Take him, and bind him hand and foot, and cast him out," issues, in its measure, against the teacher, for every help withheld, and for every truth refused, and for every falsehood enforced; so that he is more strictly fettered the more he fetters, and further outcast as he more and more misleads, till at last the bars of the iron cage close upon him, and as "the golden opes, the iron shuts amain."

We have got something out of the lines, I think, and much more is yet to be found in them; but we have done enough by way of example of the kind of word-by-word examination of your author which is rightly called "reading"; watching every accent and expression, and putting ourselves always in the author's place, annihilating our own personality and seeking to enter into his, so as to be able assuredly to say, "Thus Milton thought," not "Thus I thought, in misreading Milton." And by this process you will gradually come to attach less weight to your own "Thus I thought" at other times. You will begin to perceive that what *you* thought was a matter of no serious

importance ;—that your thoughts on any subject are not perhaps the clearest and wisest that could be arrived at thereupon :—in fact, that unless you are a very singular person, you cannot be said to have any “thoughts” at all ; that you have no materials for them, in any serious matters ;*—no right to “think,” but only to try to learn more of the facts. Nay, most probably all your life (unless, as I said, you are a singular person) you will have no legitimate right to an “opinion” on any business, except that instantly under your hand. What must of necessity be done, you can always find out, beyond question, how to do. Have you a house to keep in order, a commodity to sell, a field to plough, a ditch to cleanse ? There need be no two opinions about these proceedings ; it is at your peril if you have not much more than an “opinion” on the way to manage such matters. And also, outside of your own business, there are one or two subjects on which you are bound to have but one opinion. That roguery and lying are objectionable, and are instantly to

* Modern “Education” for the most part signifies giving people the faculty of thinking wrong on every conceivable subject of importance to them.

be flogged out of the way whenever discovered ; —that covetousness and love of quarrelling are dangerous dispositions even in children, and deadly dispositions in men and nations ;—that in the end, the God of heaven and earth loves active, modest, and kind people, and hates idle, proud, greedy, and cruel ones ;—on these general facts you are bound to have but one, and that a very strong, opinion. For the rest, respecting religions, governments, sciences, arts, you will find that, on the whole, you can know NOTHING,—judge nothing ; that the best you can do, even though you may be a well-educated person, is to be silent, and strive to be wiser every day, and to understand a little more of the thoughts of others, which so soon as you try to do honestly, you will discover that the thoughts even of the wisest are very little more than pertinent questions. To put the difficulty into a clear shape, and exhibit to you the grounds for *indecision*, that is all they can generally do for you ! —and well for them and for us, if indeed they are able “to mix the music with our thoughts, and sadden us with heavenly doubts.” This writer, from whom I have been reading to you, is not

among the first or wisest : he sees shrewdly as far as he sees, and therefore it is easy to find out his full meaning, but with the greater men, you cannot fathom their meaning ; they do not even wholly measure it themselves, — it is so wide. Suppose I had asked you, for instance, to seek for Shakespeare's opinion, instead of Milton's, on this matter of Church authority?—or for Dante's? Have any of you, at this instant, the least idea what either thought about it? Have you ever balanced the scene with the bishops in Richard III. against the character of Cranmer? the description of St. Francis and St. Dominic against that of him who made Virgil wonder to gaze upon him,—“*disteso, tanto vilmente, nell' eterno esilio*” ; or of him whom Dante stood beside, “*come 'l frate che confessa lo perfido assassin*”?* Shakespeare and Alighieri knew men better than most of us, I presume! They were both in the midst of the main struggle between the temporal and spiritual powers. They had an opinion, we may guess! But where is it? Bring it into court! Put Shakespeare's or Dante's creed into

* *Inf. xix. xxiii.*

articles, and send *that* up into the Ecclesiastical Courts!

You will not be able, I tell you again, for many and many a day, to come at the real purposes and teaching of these great men; but a very little honest study of them will enable you to perceive that what you took for your own "judgment" was mere chance prejudice, and drifted, helpless, entangled weed of castaway thought: nay, you will see that most men's minds are indeed little better than rough heath wilderness, neglected and stubborn, partly barren, partly overgrown with pestilent brakes and venomous wind-sown herbage of evil surmise; that the first thing you have to do for them, and yourself, is eagerly and scornfully to set fire to *this*; burn all the jungle into wholesome ash-heaps, and then plough and sow. All the true literary work before you, for life, must begin with obedience to that order, "Break up your fallow ground, and *sow not among thorns.*"

II. Having then faithfully listened to the great teachers, that you may enter into their Thoughts, you have yet this higher advance to make;—you have to enter into their Hearts. As you go to

them first for clear sight, so you must stay with them that you may share at last their just and mighty Passion. Passion, or "sensation." I am not afraid of the word; still less of the thing. You have heard many outcries against sensation lately; but, I can tell you, it is not less sensation we want, but more. The ennobling difference between one man and another,—between one animal and another,—is precisely in this, that one feels more than another. If we were sponges, perhaps sensation might not be easily got for us; if we were earth-worms, liable at every instant to be cut in two by the spade, perhaps too much sensation might not be good for us. But, being human creatures, *it is* good for us: nay, we are only human in so far as we are sensitive, and our honour is precisely in proportion to our passion.

You know I said of that great and pure society of the dead, that it would allow "no vain or vulgar person to enter there." What do you think I meant by a "vulgar" person? What do you yourselves mean by "vulgarity"? You will find it a fruitful subject of thought; but, briefly, the essence of all vulgarity lies in want of sensation. Simple and innocent vulgarity is

merely an untrained and undeveloped bluntness of body and mind ; but in true inbred vulgarity, there is a deathful callousness, which, in extremity, becomes capable of every sort of bestial habit and crime, without fear, without pleasure, without horror, and without pity. It is in the blunt hand and the dead heart, in the diseased habit, in the hardened conscience, that men become vulgar ; they are for ever vulgar, precisely in proportion as they are incapable of sympathy,—of quick understanding,—of all that, in deep insistence on the common, but most accurate term, may be called the “tact” or touch-faculty of body and soul : that tact which the *Mimosa* has in trees, which the pure woman has above all creatures ;—fineness and fulness of sensation, beyond reason ;—the guide and sanctifier of reason itself. Reason can but determine what is true :—it is the God-given passion of humanity which alone can recognise what God has made good.

We come then to that great concourse of the Dead, not merely to know from them what is True, but chiefly to feel with them what is Righteous. Now, to feel with them, we must be like them ; and none of us can become that

without pains. As the true knowledge is disciplined and tested knowledge—not the first thought that comes,—so the true passion is disciplined and tested passion—not the first passion that comes. The first that come are the vain, the false, the treacherous ; if you yield to them they will lead you wildly and far, in vain pursuit, in hollow enthusiasm, till you have no true purpose and no true passion left. Not that any feeling possible to humanity is in itself wrong, but only wrong when undisciplined. Its nobility is in its force and justice ; it is wrong when it is weak, and felt for paltry cause. There is a mean wonder as of a child who sees a juggler tossing golden balls, and this is base, if you will. But do you think that the wonder is ignoble, or the sensation less, with which every human soul is called to watch the golden balls of heaven tossed through the night by the Hand that made them ? There is a mean curiosity, as of a child opening a forbidden door, or a servant prying into her master's business ;—and a noble curiosity, questioning, in the front of danger, the source of the great river beyond the sand—the place of the great continents beyond the sea ;—a nobler

curiosity still, which questions of the source of the River of Life, and of the space of the Continent of Heaven,—things which “the angels desire to look into.” So the anxiety is ignoble, with which you linger over the course and catastrophe of an idle tale; but do you think the anxiety is less, or greater, with which you watch, or *ought* to watch, the dealings of fate and destiny with the life of an agonised nation? Alas! it is the narrowness, selfishness, minuteness, of your sensation that you have to deplore in England at this day;—sensation which spends itself in bouquets and speeches, in revellings and junketings, in sham fights and gay puppet shows, while you can look on and see noble nations murdered, man by man, woman by woman, child by child, without an effort or a tear.

I said “minuteness” and “selfishness” of sensation, but, in a word, I ought to have said “injustice” or “unrighteousness” of sensation. For as in nothing is a gentleman better to be discerned from a vulgar person, so in nothing is a gentle nation (such nations have been) better to be discerned from a mob, than in this,—that

their feelings are constant and just, results of due contemplation and of equal thought. You can talk a mob into anything; its feelings may be—usually are—on the whole generous and right; but it has no foundation for them, no hold of them; you may tease or tickle it into any, at your pleasure; it thinks by infection, for the most part, catching a passion like a cold, and there is nothing so little that it will not roar itself wild about, when the fit is on;—nothing so great but it will forget in an hour, when the fit is past. But a gentleman's, or a gentle nation's, passions are just, measured, and continuous. A great nation, for instance, does not spend its entire national wits for a couple of months in weighing evidence of a single ruffian's having done a single murder, and for a couple of years see its own children murder each other by their thousands or tens of thousands a day, considering only what the effect is likely to be on the price of cotton, and caring nowise to determine which side of battle is in the wrong. Neither does a great nation send its poor little boys to jail for stealing six walnuts, and allow its bankrupts to steal their hundreds of thousands

with a bow, and its bankers, rich with poor men's savings, to close their doors "under circumstances over which they have no control," with a "by your leave"; and large landed estates to be bought by men who have made their money by going with armed steamers up and down the China Seas, selling opium at the cannon's mouth, and altering, for the benefit of the foreign nation, the common highwayman's demand of "your money *or* your life," into that of "your money *and* your life." Neither does a great nation allow the lives of its innocent poor to be parched out of them by fog fever, and rotted out of them by dunghill plague, for the sake of sixpence a life extra per week to its landlords; * and then debate, with drivelling tears, and diabolical sympathies, whether it ought not

* See the evidence in the Medical officer's report to the Privy Council, just published. There are suggestions in its preface which will make some stir among us, I fancy, respecting which let me note these points following :—

There are two theories on the subject of land now abroad, and in contention ; both false.

The first is that by Heavenly law, there have always existed, and must continue to exist, a certain number of hereditarily sacred persons, to whom the earth, air, and water of the world belong, as personal property ; of which earth, air, and water

piously to save, and nursingly cherish, the lives of its murderers. Also, a great nation, having made up its mind that hanging is quite the wholesomest process for its homicides in general, can yet with mercy distinguish between the

these persons may, at their pleasure, permit, or forbid, the rest of the human race to eat, to breathe, or to drink. This theory is not for many years longer tenable. The adverse theory is that a division of the land of the world among the mob of the world would immediately elevate the said mob into sacred personages; that houses would then build themselves, and corn grow of itself; and that everybody would be able to live, without doing any work for his living. This theory would also be found highly untenable in practice.

It will, however, require some rough experiments, and rougher catastrophes, even in this magnesium-lighted epoch, before the generality of persons will be convinced that no law concerning anything, least of all concerning land, for either holding or dividing it, or renting it high, or renting it low, would be of the smallest ultimate use to the people, so long as the general contest for life, and for the means of life, remains one of mere brutal competition. That contest, in an unprincipled nation, will take one deadly form or another, whatever laws you make for it. For instance, it would be an entirely wholesome law for England, if it could be carried, that maximum limits should be assigned to incomes, according to classes; and that every nobleman's income should be paid to him as a fixed salary or pension by the nation, and not squeezed by him in a variable sum, at discretion, out of the tenants of his land. But if you could get such a law passed to-morrow; and if, which would be further necessary, you could fix the value of the

degrees of guilt in homicides, and does not yelp like a pack of frost-pinched wolf-cubs on the blood track of an unhappy, crazed boy, or gray-haired clodpate Othello "perplexed i' the extreme," at the very moment that it is sending a

assigned incomes by making a given weight of pure wheat-flour legal tender for a given sum, a twelvemonth would not pass before another currency would have been tacitly established, and the power of accumulative wealth would have reasserted itself in some other article, or some imaginary sign. Forbid men to buy each other's lives for sovereigns, and they will for shells, or slates. There is only one cure for public distress,—and that is public education, directed to make men thoughtful, merciful, and just. There are, indeed, many laws conceivable which would gradually better and strengthen the national temper; but, for the most part, they are such as the national temper must be much bettered before it would bear. A nation in its youth may be helped by laws, as a weak child by back-boards, but when it is old, it cannot that way straighten its crooked spine.

And besides, the problem of land, at its worst, is a bye one; distribute the earth as you will, the principal question remains inexorable,—Who is to dig it? Which of us, in brief words, is to do the hard and dirty work for the rest—and for what pay? Who is to do the pleasant and clean work, and for what pay? Who is to do no work, and for what pay? And there are curious moral and religious questions connected with these. How far is it lawful to suck a portion of the soul of a great many persons, in order to put the abstracted psychical quantities together, and make one very beautiful or ideal soul? If we had to deal with mere blood, instead of spirit, and the thing

Minister of the Crown to make polite speeches to a man who is bayoneting young girls in their father's sight, and killing noble youths in cool blood, faster than a country butcher kills lambs in spring. And, lastly, a great nation does not mock Heaven and its Powers, by pretending

might literally be done (as it has been done with infants before now) so that it were possible, by taking a certain quantity of blood from the arms of a given number of the mob, and putting it all into one person, to make a more azure-blooded gentleman of him, the thing would of course be managed; but secretly, I should conceive. But now because it is brain and soul that we abstract, not visible blood, it can be done quite openly; and we live, we gentlemen, on delicatest prey, after the manner of weasels; that is to say, we keep a certain number of clowns digging and ditching, and generally stupefied, in order that we, being fed gratis, may have all the thinking and feeling to ourselves. Yet there is a great deal to be said for this. A highly-bred and trained English, French, Austrian, or Italian gentleman (much more a lady) is a great production; a better production than most statues; being beautifully coloured as well as shaped, and plus all the brains; a glorious thing to look at, a wonderful thing to talk to; and you cannot have it, any more than a pyramid or a church, but by sacrifice of much contributed life. And it is, perhaps, better to build a beautiful human creature than a beautiful dome or steeple, and more delightful to look up reverently to a creature far above us, than to a wall; only the beautiful human creature will have some duties to do in return—duties of living belfry and rampart—of which presently.

belief in a revelation which asserts the love of money to be the root of *all* evil, and declaring, at the same time, that it is actuated, and intends to be actuated, in all chief national deeds and measures, by no other love.

My friends, I do not know why any of us should talk about reading. We want some sharper discipline than that of reading; but, at all events, be assured, we cannot read. No reading is possible for a people with its mind in this state. No sentence of any great writer is intelligible to them. It is simply and sternly impossible for the English public, at this moment, to understand any thoughtful writing,—so incapable of thought has it become in its insanity of avarice. Happily, our disease is, as yet, little worse than this incapacity of thought; it is not corruption of the inner nature; we ring true still, when anything strikes home to us; and though the idea that everything should “pay” has infected our every purpose so deeply, that even when we would play the good Samaritan, we never take out our twopence and give them to the host, without saying, “When I come again, thou shalt give me

fourpence," there is a capacity of noble passion left in our hearts' core. We show it in our work—in our war,—even in those unjust domestic affections which make us furious at a small private wrong, while we are polite to a boundless public one: we are still industrious to the last hour of the day, though we add the gambler's fury to the labourer's patience; we are still brave to the death, though incapable of discerning true cause for battle, and are still true in affection to our own flesh, to the death, as the sea-monsters are, and the rock-eagles. And there is hope for a nation while this can be still said of it. As long as it holds its life in its hand, ready to give it for its honour (though a foolish honour), for its love (though a selfish love), and for its business (though a base business), there is hope for it. But hope only; for this instinctive, reckless virtue cannot last. No nation can last, which has made a mob of itself, however generous at heart. It must discipline its passions, and direct them, or they will discipline it, one day, with scorpion whips. Above all, a nation cannot last as a money-making mob: it cannot with impunity, —it cannot with existence, —go on despising

literature, despising science, despising art, despising nature, despising compassion, and concentrating its soul on Pence. Do you think these are harsh or wild words? Have patience with me but a little longer. I will prove their truth to you, clause by clause.

I. I say first we have despised literature. What do we, as a nation, care about books? How much do you think we spend altogether on our libraries, public or private, as compared with what we spend on our horses? If a man spends lavishly on his library, you call him mad—a biblio-maniac. But you never call any one a horse-maniac, though men ruin themselves every day by their horses, and you do not hear of people ruining themselves by their books. Or, to go lower still, how much do you think the contents of the book-shelves of the United Kingdom, public and private, would fetch, as compared with the contents of its wine-cellars? What position would its expenditure on literature take, as compared with its expenditure on luxurious eating? We talk of food for the mind, as of food for the body: now a good book contains such food inexhaustibly; it is a

provision for life, and for the best part of us ; yet how long most people would look at the best book before they would give the price of a large turbot for it ! Though there have been men who have pinched their stomachs and bared their backs to buy a book, whose libraries were cheaper to them, I think, in the end, than most men's dinners are. We are few of us put to such trial, and more the pity ; for, indeed, a precious thing is all the more precious to us if it has been won by work or economy ; and if public libraries were half as costly as public dinners, or books cost the tenth part of what bracelets do, even foolish men and women might sometimes suspect there was good in reading, as well as in munching and sparkling ; whereas the very cheapness of literature is making even wise people forget that if a book is worth reading, it is worth buying. No book is worth anything which is not worth *much* ; nor is it serviceable, until it has been read, and re-read, and loved, and loved again ; and marked, so that you can refer to the passages you want in it, as a soldier can seize the weapon he needs in an armoury, or a housewife bring the spice she needs from her store. Bread of flour is good :

but there is bread, sweet as honey, if we would eat it, in a good book ; and the family must be poor indeed which, once in their lives, cannot, for such multipliable barley-loaves, pay their baker's bill. We call ourselves a rich nation, and we are filthy and foolish enough to thumb each other's books out of circulating libraries !

II. I say we have despised science. "What !" (you exclaim) "are we not foremost in all discovery, and is not the whole world giddy by reason, or unreason, of our inventions?" Yes ; but do you suppose that is national work? That work is all done in spite of the nation ; by private people's zeal and money. We are glad enough, indeed, to make our profit of science ; we snap up anything in the way of a scientific bone that has meat on it, eagerly enough : but if the scientific man comes for a bone or a crust to *us*, that is another story. What have we publicly done for science? We are obliged to know what o'clock it is, for the safety of our ships, and therefore we pay for an observatory ; and we allow ourselves, in the person of our Parliament, to be annually tormented into doing something, in a slovenly way, for the British Museum ; sullenly

apprehending that to be a place for keeping stuffed birds in, to amuse our children. If anybody will pay for their own telescope, and resolve another nebula, we cackle over the discernment as if it were our own; if one in ten thousand of our hunting squires suddenly perceives that the earth was indeed made to be something else than a portion for foxes, and burrows in it himself, and tells us where the gold is, and where the coals, we understand that there is some use in that: and very properly knight him; but is the accident of his having found out how to employ himself usefully any credit to *us*? (The negation of such discovery among his brother squires may perhaps be some *discredit* to us, if we would consider of it.) But if you doubt these generalities, here is one fact for us all to meditate upon, illustrative of our love of science. Two years ago there was a collection of the fossils of Solenhofen to be sold in Bavaria; the best in existence, containing many specimens unique for perfectness, and one, unique as an example of a species (a whole kingdom of unknown living creatures being announced by that fossil). This collection of which the mere market worth, among private

buyers, would probably have been some thousand or twelve hundred pounds, was offered to the English nation for seven hundred : but we would not give seven hundred, and the whole series would have been in the Munich Museum at this moment, if Professor Owen* had not with loss of his own time, and patient tormenting of the British public in person of its representatives, got leave to give four hundred pounds at once, and himself become answerable for the other three ! which the said public will doubtless pay him eventually, but sulkily, and caring nothing about the matter, all the while ; only always ready to cackle if any credit comes of it. Consider, I beg of you, arithmetically, what this fact means. Your annual expenditure for public purposes (a third of it for military apparatus) is at least 50 millions. Now £700 is to £50,000,000 roughly, as sevenpence to two thousand pounds. Suppose then, a gentleman of unknown income, but whose wealth was to be conjectured from the fact

* I state this fact without Professor Owen's permission ; which of course he could not with propriety have granted, had I asked it ; but I consider it so important that the public should be aware of the fact, that I do what seems to me right, though rude.

that he spent two thousand a year on his park walls and footmen only, professes himself fond of science; and that one of his servants comes eagerly to tell him that a unique collection of fossils, giving clue to a new era of creation, is to be had for the sum of sevenpence sterling; and that the gentleman who is fond of science, and spends two thousand a year on his park, answers, after keeping his servant waiting several months, "Well! I'll give you fourpence for them, if you will be answerable for the extra threepence yourself, till next year!"

III. I say you have despised Art! "What!" you again answer, "have we not Art exhibitions, miles long? and do we not pay thousands of pounds for single pictures? and have we not Art schools and institutions, more than ever nation had before?" Yes, truly, but all that is for the sake of the shop. You would fain sell canvas as well as coals, and crockery as well as iron; you would take every other nation's bread out of its mouth if you could; not being able to do that, your ideal of life is to stand in the thoroughfares of the world, like Ludgate apprentices, screaming to every passer-by, "What d'ye lack?" You know

nothing of your own faculties or circumstances ; you fancy that, among your damp, flat, fat fields of clay, you can have as quick art-fancy as the Frenchman among his bronzed vines, or the Italian under his volcanic cliffs ;—that Art may be learned as book-keeping is, and when learned, will give you more books to keep. You care for pictures, absolutely, no more than you do for the bills pasted on your dead walls. There is always room on the wall for the bills to be read,—never for the pictures to be seen. You do not know what pictures you have (by repute) in the country, nor whether they are false or true, nor whether they are taken care of or not ; in foreign countries, you calmly see the noblest existing pictures in the world rotting in abandoned wreck—(and, in Venice, with the Austrian guns deliberately pointed at the palaces containing them), and if you heard that all the Titians in Europe were made sand-bags to-morrow on the Austrian forts, it would not trouble you so much as the chance of a brace or two of game less in your own bags in a day's shooting. That is your national love of Art.

IV. You have despised nature ; that is to say,

all the deep and sacred sensations of natural scenery. The French revolutionists made stables of the cathedrals of France; you have made race-courses of the cathedrals of the earth. Your *one* conception of pleasure is to drive in railroad carriages round their aisles, and eat of their altars. You have put a railroad bridge over the fall of Schaffhausen. You have tunnelled the cliffs of Lucerne by Tell's chapel; you have destroyed the Clarens shore of the Lake of Geneva; there is not a quiet valley in England that you have not filled with bellowing fire; there is no particle left of English land which you have not trampled coal ashes into—nor any foreign city in which the spread of your presence is not marked among its fair old streets and happy gardens by a consuming white leprosy of new hotels and perfumers' shops: the Alps themselves, which your own poets used to love so reverently, you look upon as soaped poles in a bear-garden, which you set yourselves to climb, and slide down again, with "shrieks of delight." When you are past shrieking, having no human articulate voice to say you are glad with, you fill the quietude of their valleys with gunpowder

blasts, and rush home, red with cutaneous eruption of conceit, and voluble with convulsive hiccough of self-satisfaction. I think nearly the two sorrowfullest spectacles I have ever seen in humanity, taking the deep inner significance of them, are the English mobs in the valley of Chamouni, amusing themselves with firing rusty howitzers; and the Swiss vintagers of Zurich expressing their Christian thanks for the gift of the vine, by assembling in knots in the "towers of the vineyards," and slowly loading and firing horse-pistols from morning till evening. It is pitiful to have dim conceptions of duty; more pitiful, it seems to me, to have conceptions like these, of mirth.

Lastly. You despise compassion. There is no need of words of mine for proof of this. I will merely print one of the newspaper paragraphs which I am in the habit of cutting out and throwing into my store-drawer; here is one from a *Daily Telegraph* of an early date this year; date which though by me carelessly left unmarked, is easily discoverable, for on the back of the slip there is the announcement that "yesterday the seventh of the special services of this year was

performed by the Bishop of Ripon in St. Paul's"; and there is a pretty piece of modern political economy besides, worth preserving note of, I think, so I print it in the note below.* But my business is with the main paragraph, relating one of such facts as happen now daily, which, by chance, has taken a form in which it came before the coroner. I will print the paragraph in red. Be sure, the facts themselves are written in that colour, in a book which we shall all of us, literate or illiterate, have to read our page of, some day.

"An inquiry was held on Friday by Mr. Richards, deputy coroner, at the White Horse Tavern, Christ Church, Spitalfields, respecting the death of Michael Collins, aged 58 years. Mary Collins, a miserable-looking woman, said that she lived with the deceased and his son in a

* It is announced that an arrangement has been concluded between the Ministry of Finance and the Bank of Credit for the payment of the eleven millions which the State has to pay to the National Bank by the 14th inst. This sum will be raised as follows:—The eleven commercial members of the committee of the Bank of Credit will each borrow a million of florins for three months of this bank, which will accept their bills, which again will be discounted by the National Bank. By this arrangement *the National Bank will itself furnish the funds with which it will be paid.*

room at 2 Cobb's Court, Christ Church. Deceased was a 'translator' of boots. Witness went out and bought old boots; deceased and his son made them into good ones, and then witness sold them for what she could get at the shops, which was very little indeed. Deceased and his son used to work night and day to try and get a little bread and tea, and pay for the room (2s. a week), so as to keep the home together. On Friday night week deceased got up from his bench and began to shiver. He threw down the boots, saying, 'Somebody else must finish them when I am gone, for I can do no more.' There was no fire, and he said, 'I would be better if I was warm.' Witness therefore took two pairs of translated boots to sell at the shop, but she could only get 14d. for the two pairs, for the people at the shop said, 'We must have our profit.' Witness got 14 lb. of coal, and a little tea and bread. Her son sat up the whole night to make the 'translations,' to get money, but deceased died on Saturday morning. The family never had enough to eat.—Coroner: 'It seems to me deplorable that you did not go into the work-house.'—Witness: 'We wanted the comforts of

our little home.' A juror asked what the comforts were, for he only saw a little straw in the corner of the room, the windows of which were broken. The witness began to cry, and said that they had a quilt and other little things. The deceased said he never would go into the workhouse. In summer, when the season was good, they sometimes made as much as 10s. profit in the week. They then always saved towards the next week, which was generally a bad one. In winter they made not half so much. For three years they had been getting from bad to worse.—Cornelius Collins said that he had assisted his father since 1847. They used to work so far into the night that both nearly lost their eyesight. Witness now had a film over his eyes. Five years ago deceased applied to the parish for aid. The relieving officer gave him a 4lb. loaf, and told him if he came again he should 'get the stones.'*

* I do not know what this means. It may perhaps be well to preserve beside this paragraph another cutting out of my store-drawer, from the *Morning Post*, of about a parallel date, Friday, March 10th, 1865;—"The *salons* of Mme. C——, who did the honours with clever imitative grace and elegance, were crowded with princes, dukes, marquises, and counts—in fact, with the same *male* company as one meets at the parties of the

That disgusted deceased, and he would have nothing to do with them since. They got worse and worse until last Friday week, when they had not even a halfpenny to buy a candle. Deceased then lay down on the straw, and said he could not live till morning.—A juror: 'You are dying of starvation yourself, and you ought to go into the house until the summer.'—Witness: 'If we

Princess Metternich and Madame Drouyn de Lhuys. Some English peers and members of Parliament were present, and appeared to enjoy the animated and dazzlingly improper scene. On the second floor the supper tables were loaded with every delicacy of the season. That your readers may form some idea of the dainty fare of the Parisian demimonde, I copy the menu of the supper, which was served to all the guests (about 200) seated at four o'clock. Choice Yquem, Johannisberg, Lafitte, Tokay, and Champagne of the finest vintages were served most lavishly throughout the morning. After supper dancing was resumed with increased animation, and the ball terminated with a *chaîne diabolique* and a *cancan d'enfer* at seven in the morning. (Morning-service—'Ere the fresh lawns appeared, under the opening eyelids of the Morn.'—) Here is the menu:—'*Consommé de volaille à la Bagration; 16 hors-d'œuvre variés. Bouchées à la Talleyrand. Saumons froids, sauce Ravigote. Filets de bœuf en Bellevue, timbales milanaises chaudfroid de gibier. Dindes truffées. Pâtés de foies gras, buissons d'écrevisses, salades vénétiennes, gèlées blanches aux fruits, gateaux mancini parisiens et parisiennes. Fromages, glacés. Ananas. Dessert.'*"

went in, we should die. When we come out in the summer we should be like people dropped from the sky. No one would know us, and we would not have even a room. I could work now if I had food, for my sight would get better.' Dr. G. P. Walker said deceased died from syncope, from exhaustion from want of food. The deceased had had no bedclothes. For four months he had had nothing but bread to eat. There was not a particle of fat in the body. There was no disease, but if there had been medical attendance, he might have survived the syncope or fainting. The coroner having remarked upon the painful nature of the case, the jury returned the following verdict, 'That deceased died from exhaustion from want of food and the common necessaries of life; also through want of medical aid.'"

"Why would witness not go into the workhouse?" you ask. Well, the poor seem to have a prejudice against the workhouse which the rich have not; for of course every one who takes a pension from Government goes into the workhouse on a grand scale: only the workhouses for the rich do not involve the idea of work, and

should be called play-houses. But the poor like to die independently, it appears ; perhaps if we made the play-houses for them pretty and pleasant enough, or gave them their pensions at home, and allowed them a little introductory peculation with the public money, their minds might be reconciled to it. Meantime, here are the facts : we make our relief either so insulting to them, or so painful, that they rather die than take it at our hands ; or, for third alternative, we leave them so untaught and foolish that they starve like brute creatures, wild and dumb, not knowing what to do, or what to ask. I say, you despise compassion ; if you did not, such a newspaper paragraph would be as impossible in a Christian country as a deliberate assassination permitted in its public streets.* “Christian,” did I say?

* I am heartily glad to see such a paper as the *Pall Mall Gazette* established ; for the power of the press in the hands of highly-educated men, in independent position, and of honest purpose, may indeed become all that it has been hitherto vainly vaunted to be. Its editor will therefore, I doubt not, pardon me, in that, by very reason of my respect for the journal, I do not let pass unnoticed an article in its third number, page 5, which was wrong in every word of it, with the intense wrongness which only an honest man can achieve who has taken a false turn of thought in the outset, and is following it,

Alas, if we were but wholesomely un-Christian, it would be impossible: it is our imaginary Christianity that helps us to commit these crimes, for we revel and luxuriate in our faith, for the lewd sensation of it; dressing *it* up, like every-

regardless of consequences. It contained at the end this notable passage:—

“The bread of affliction, and the water of affliction—aye, and the bedsteads and blankets of affliction, are the very utmost that the law ought to give to *outcasts merely as outcasts*.” I merely put beside this expression of the gentlemanly mind of England in 1865, a part of the message which Isaiah was ordered to “lift up his voice like a trumpet” in declaring to the gentlemen of his day: “Ye fast for strife, and to smite with the fist of wickedness. Is not this the fast that I have chosen, to deal thy bread to the hungry, and that thou bring the poor *that are cast out* (margin ‘afflicted’) to *thy* house.” The falsehood on which the writer had mentally founded himself, as previously stated by him, was this: “To confound the functions of the dispensers of the poor-rates with those of the dispensers of a charitable institution is a great and pernicious error.” This sentence is so accurately and exquisitely wrong, that its substance must be thus reversed in our minds before we can deal with any existing problem of national distress. “To understand that the dispensers of the poor-rates are the almoners of the nation, and should distribute its alms with a gentleness and freedom of hand as much greater and franker than that possible to individual charity, as the collective national wisdom and power may be supposed greater than those of any single person, is the foundation of all law respecting pauperism.”

thing else, in fiction. The dramatic Christianity of the organ and aisle, of dawn service and twilight-revival—the Christianity which we do not fear to mix the mockery of, pictorially, with our play about the devil, in our Satanellas,—Roberts, —Fausts, chanting hymns through traceried windows for background effect, and artistically modulating the “Dio” through variation on variation of mimicked prayer: (while we distribute tracts, next day, for the benefit of uncultivated swearers, upon what we suppose to be the signification of the Third Commandment;)—this gas-lighted, and gas-inspired, Christianity, we are triumphant in, and draw back the hem of our robes from the touch of the heretics who dispute it. But to do a piece of common Christian righteousness in a plain English word or deed; to make Christian law any rule of life, and found one National act or hope thereon—we know too well what our faith comes to for that! You might sooner get lightning out of incense smoke than true action or passion out of your modern English religion. You had better get rid of the smoke, and the organ pipes, both: leave them, and the Gothic windows and the painted glass,

to the property man ; give up your carburetted hydrogen ghost in one healthy expiration, and look after Lazarus at the door-step. For there is a true Church wherever one hand meets another helpfully, and that is the only holy or Mother Church which ever was, or ever shall be.

All these pleasures, then, and all these virtues, I repeat, you nationally despise. You have, indeed, men among you who do not ; by whose work, by whose strength, by whose life, by whose death, you live, and never thank them. Your wealth, your amusement, your pride, would all be alike impossible, but for those whom you scorn or forget. The policeman, who is walking up and down the black lane all night to watch the guilt you have created there, and may have his brains beaten out and be maimed for life at any moment, and never be thanked : the sailor wrestling with the sea's rage ; the quiet student poring over his book or his vial ; the common worker, without praise, and nearly without bread, fulfilling his task as your horses drag your carts, hopeless, and spurned of all : these are the men by whom England lives ; but they are not the nation ; they are only the body and nervous

force of it, acting still from old habit in convulsive perseverance, while the mind is gone. Our National mind and purpose are to be amused; our National religion, the performance of church ceremonies, and preaching of soporific truths (or untruths) to keep the mob quietly at work, while we amuse ourselves; and the necessity for this amusement is fastening on us as a feverous disease of parched throat and wandering eyes—senseless, dissolute, merciless.

When men are rightly occupied, their amusement grows out of their work, as the colour-petals out of a fruitful flower;—when they are faithfully helpful and compassionate, all their emotions become steady, deep, perpetual, and vivifying to the soul as the natural pulse to the body. But now, having no true business, we pour our whole masculine energy into the false business of money-making; and having no true emotion, we must have false emotions dressed up for us to play with, not innocently, as children with dolls, but guiltily and darkly, as the idolatrous Jews with their pictures on cavern walls, which men had to dig to detect. The justice we do not execute, we mimic in the novel and on the stage; for the

beauty we destroy in nature, we substitute the metamorphosis of the pantomime, and (the human nature of us imperatively requiring awe and sorrow of *some* kind) for the noble grief we should have borne with our fellows, and the pure tears we should have wept with them, we gloat over the pathos of the police court, and gather the night-dew of the grave.

It is difficult to estimate the true significance of these things; the facts are frightful enough;—the measure of national fault involved in them is perhaps not as great as it would at first seem. We permit, or cause, thousands of deaths daily, but we mean no harm; we set fire to houses, and ravage peasants' fields; yet we should be sorry to find we had injured anybody. We are still kind at heart; still capable of virtue, but only as children are. Chalmers, at the end of his long life, having had much power with the public, being plagued in some serious matter by a reference to "public opinion," uttered the impatient exclamation, "The public is just a great baby!" And the reason that I have allowed all these graver subjects of thought to mix themselves up with an inquiry into methods of reading, is

that, the more I see of our national faults or miseries, the more they resolve themselves into conditions of childish illiterateness, and want of education in the most ordinary habits of thought. It is, I repeat, not vice, not selfishness, not dulness of brain, which we have to lament; but an unreachable schoolboy's recklessness, only differing from the true schoolboy's in its incapacity of being helped, because it acknowledges no master.

There is a curious type of us given in one of the lovely, neglected works of the last of our great painters. It is a drawing of Kirkby Lonsdale churchyard, and of its brook, and valley, and hills, and folded morning sky beyond. And unmindful alike of these, and of the dead who have left these for other valleys and for other skies, a group of schoolboys have piled their little books upon a grave, to strike them off with stones. So do we play with the words of the dead that would teach us, and strike them far from us with our bitter, reckless will, little thinking that those leaves which the wind scatters had been piled, not only upon a gravestone, but upon the seal of an enchanted vault—nay, the gate of a

great city of sleeping kings, who would awake for us, and walk with us, if we knew but how to call them by their names. How often, even if we lift the marble entrance gate, do we but wander among those old kings in their repose, and finger the robes they lie in, and stir the crowns on their foreheads; and still they are silent to us, and seem but a dusty imagery; because we know not the incantation of the heart that would wake them;—which, if they once heard, they would start up to meet us in their power of long ago, narrowly to look upon us, and consider us; and, as the fallen kings of Hades meet the newly fallen, saying, “Art thou also become weak as we—art thou also become one of us?” so would these kings, with their undimmed, unshaken diadems, meet us, saying, “Art thou also become pure and mighty of heart as we? art thou also become one of us?”

Mighty of heart, mighty of mind—“magnanimous”—to be this, is indeed to be great in life; to become this increasingly, is, indeed, to “advance in life,”—in life itself—not in the trappings of it. My friends, do you remember that old Scythian custom, when the head of a

house died? How he was dressed in his finest dress, and set in his chariot, and carried about to his friends' houses; and each of them placed him at his table's head, and all feasted in his presence? Suppose it were offered to you, in plain words, as it *is* offered to you in dire facts, that you should gain this Scythian honour, gradually, while you yet thought yourself alive. Suppose the offer were this: "You shall die slowly; your blood shall daily grow cold, your flesh petrify, your heart beat at last only as a rusted group of iron valves. Your life shall fade from you and sink through the earth into the ice of Caina; but, day by day, your body shall be dressed more gaily, and set in higher chariots, and have more orders on its breast—crowns on its head, if you will. Men shall bow before it, stare and shout round it, crowd after it up and down the streets; build palaces for it, feast with it at their tables' heads all the night long; your soul shall stay enough within it to know what they do, and feel the weight of the golden dress on its shoulders, and the furrow of the crown-edge on the skull;—no more. Would you take the offer, verbally made by the death-angel?

Would the meanest among us take it, think you? Yet practically and verily we grasp at it, every one of us, in a measure; many of us grasp at it in its fulness of horror. Every man accepts it, who desires to advance in life without knowing what life is; who means only that he is to get more horses, and more footmen, and more fortune, and more public honour, and—*not* more personal soul. He only is advancing in life, whose heart is getting softer, whose blood warmer, whose brain quicker, whose spirit is entering into living* peace. And the men who have this life in them are the true lords or kings of the earth—they, and they only. All other kingships, so far as they are true, are only the practical issue and expression of theirs; if less than this, they are either dramatic royalties,—costly shows, with real jewels instead of tinsel—the toys of nations; or else, they are no royalties at all, but tyrannies, or the mere active and practical issue of national folly; for which reason I have said of them elsewhere, “Visible governments are the toys of some nations, the diseases of others, the harness of some, the burdens of more.”

* “τὸ δὲ φρόνημα τοῦ πνεύματος ζωὴ καὶ εἰρήνη.”

But I have no words for the wonder with which I hear Kinghood still spoken of, even among thoughtful men, as if governed nations were a personal property, and might be bought and sold, or otherwise acquired, as sheep, of whose flesh their king was to feed, and whose fleece he was to gather; as if Achilles' indignant epithet of base kings, "people-eating," were the constant and proper title of all monarchs; and enlargement of a king's dominion meant the same thing as the increase of a private man's estate! Kings who think so, however powerful, can no more be the true kings of the nation than gad-flies are the kings of the horse; they suck it, and may drive it wild, but do not guide it. They, and their courts, and their armies are, if one could see clearly, only a large species of marsh mosquito, with bayonet proboscis and melodious, band-mastered, trumpeting in the summer air; the twilight being, perhaps, sometimes fairer, but hardly more wholesome, for its glittering mists of midge companies. The true kings, meanwhile, rule quietly, if at all, and hate ruling; too many of them make "il gran rifiuto"; and if they do

not, the mob, as soon as they are likely to become useful to it, is pretty sure to make *its* "gran rifiuto" of *them*.

Yet the visible king may also be a true one, some day, if ever day comes when he will estimate his dominion by the *force* of it,—not the geographical boundaries. It matters very little whether Trent cuts you a cantel out here, or Rhine rounds you a castle less there. But it does matter to you, king of men, whether you can verily say to this man, "Go," and he goeth; and to another, "Come," and he cometh. Whether you can turn your people as you can Trent—and where it is that you bid them come, and where go. It matters to you, king of men, whether your people hate you, and die by you, or love you, and live by you. You may measure your dominion by multitudes better than by miles; and count degrees of love-latitude, not from, but to, a wonderfully warm and infinite equator.

Measure! nay, you cannot measure. Who shall measure the difference between the power of those who "do and teach," and who are greatest in the kingdoms of earth, as of heaven

—and the power of those who undo, and consume—whose power, at the fullest, is only the power of the moth and the rust? Strange! to think how the Moth-kings lay up treasures for the moth, and the Rust-kings, who are to their people's strength as rust to armour, lay up treasures for the rust; and the Robber-kings, treasures for the robber; but how few kings have ever laid up treasures that needed no guarding — treasures of which, the more thieves there were, the better! Broidered robe, only to be rent—helm and sword, only to be dimmed; jewel and gold, only to be scattered—there have been three kinds of kings who have gathered these. Suppose there ever should arise a Fourth order of kings, who had read, in some obscure writing of long ago, that there was a Fourth kind of treasure, which the jewel and gold could not equal, neither should it be valued with pure gold. A web more fair in the weaving by Athena's shuttle; an armour forged in diviner fire by Vulcanian force—a gold only to be mined in the sun's red heart, where he sets over the Delphian cliffs;—deep-pictured tissue, impenetrable armour, potable

gold! — the three great Angels of Conduct, Toil, and Thought, still calling to us, and waiting at the posts of our doors, to lead us, if we would, with their winged power, and guide us, with their inescapable eyes, by the path which no fowl knoweth, and which the vulture's eye has not seen! Suppose kings should ever arise, who heard and believed this word, and at last gathered and brought forth treasures of—Wisdom—for their people?

Think what an amazing business *that* would be! How inconceivable, in the state of our present national wisdom. That we should bring up our peasants to a book exercise instead of a bayonet exercise!—organise, drill, maintain with pay, and good generalship, armies of thinkers, instead of armies of stabbers! —find national amusement in reading-rooms as well as rifle-grounds; give prizes for a fair shot at a fact, as well as for a leaden splash on a target. What an absurd idea, it seems, put fairly in words, that the wealth of the capitalists of civilised nations should ever come to support literature instead of war!

Have yet patience with me, while I read

you a single sentence out of the only book, properly to be called a book, that I have yet written myself, the one that will stand (if anything stand) surest and longest of all work of mine.

“It is one very awful form of the operation of wealth in Europe that it is entirely capitalists' wealth which supports unjust wars. Just wars do not need so much money to support them; for most of the men who wage such, wage them gratis; but for an unjust war, men's bodies and souls have both to be bought; and the best tools of war for them besides, which makes such war costly to the maximum; not to speak of the cost of base fear, and angry suspicion, between nations which have not grace nor honesty enough in all their multitudes to buy an hour's peace of mind with; as, at present, France and England, purchasing of each other ten millions' sterling worth of consternation, annually (a remarkably light crop, half thorns and half aspen leaves, sown, reaped, and granaried by the 'science' of the modern political economist, teaching covetousness instead of truth). And, all unjust war being

supportable, if not by pillage of the enemy, only by loans from capitalists, these loans are repaid by subsequent taxation of the people, who appear to have no will in the matter, the capitalists' will being the primary root of the war; but its real root is the covetousness of the whole nation, rendering it incapable of faith, frankness, or justice, and bringing about, therefore, in due time, his own separate loss and punishment to each person."

France and England literally, observe, buy *panic* of each other; they pay, each of them, for ten thousand thousand pounds' worth of terror, a year. Now suppose, instead of buying these ten millions' worth of panic annually, they made up their minds to be at peace with each other, and buy ten millions' worth of knowledge annually; and that each nation spent its ten thousand thousand pounds a year in founding royal libraries, royal art galleries, royal museums, royal gardens, and places of rest. Might it not be better somewhat for both French and English?

It will be long, yet, before that comes to pass. Nevertheless, I hope it will not be long

before royal or national libraries will be founded in every considerable city, with a royal series of books in them ; the same series in every one of them, chosen books, the best in every kind, prepared for that national series in the most perfect way possible ; their text printed all on leaves of equal size, broad of margin, and divided into pleasant volumes, light in the hand, beautiful, and strong, and thorough as examples of binders' work ; and that these great libraries will be accessible to all clean and orderly persons at all times of the day and evening ; strict law being enforced for this cleanliness and quietness.

I could shape for you other plans, for art galleries, and for natural history galleries, and for many precious, many, it seems to me, needful, things ; but this book plan is the easiest and needfullest, and would prove a considerable tonic to what we call our British constitution, which has fallen dropsical of late, and has an evil thirst, and evil hunger, and wants healthier feeding. You have got its corn laws repealed for it ; try if you cannot get corn laws established for it, dealing in a better bread ;—bread

made of that old enchanted Arabian grain, the Sesame, which opens doors;—doors, not of robbers', but of Kings' Treasuries.

Friends, the treasuries of true kings are the streets of their cities; and the gold they gather, which for others is as the mire of the streets, changes itself, for them and their people, into a crystalline pavement for evermore.

LECTURE II.—LILIES.

OF QUEENS' GARDENS.

LECTURE II.—LILIES.

OF QUEENS' GARDENS.

“As the lily among the thorns, so my loved one among the damsels.”

It will, perhaps, be well, as this Lecture is the sequel of one previously given, that I should shortly state to you my general intention in both. The questions specially proposed to you in the first, namely, How and What to Read, rose out of a far deeper one, which it was my endeavour to make you propose earnestly to yourselves, namely, *Why* to read. I want you to feel, with me, that whatever advantages we possess in the present day in the diffusion of education and of literature, can only be rightly used by any of us when we have apprehended clearly what education is to lead to, and literature to teach. I wish you to see that both well-directed moral training and well-chosen reading lead to the possession of a power over the ill-guided and illiterate, which is, according to the measure of it, in the truest sense, *kingly*; conferring indeed the purest king-

ship that can exist among men : too many other kingships (however distinguished by visible insignia or material power) being either spectral, or tyrannous ;—Spectral—that is to say, aspects and shadows of royalty, hollow as death, and which only the “Likeness of a kingly crown have on” ; or else tyrannous—that is to say, substituting their own will for the law of justice and love by which all true kings rule.

There is, then, I repeat—and as I want to leave this idea with you, I begin with it, and shall end with it—only one pure kind of kingship ; an inevitable and eternal kind, crowned or not : the kingship, namely, which consists in a stronger moral state, and a truer thoughtful state, than that of others ; enabling you, therefore, to guide, or to raise them. Observe that word “State” ; we have got into a loose way of using it. It means literally the standing and stability of a thing ; and you have the full force of it in the derived word “statue”—“the immovable thing.” A king’s majesty or “state,” then, and the right of his kingdom to be called a state, depends on the movelessness of both :—without tremor, without quiver of balance ; established and enthroned

upon a foundation of eternal law which nothing can alter nor overthrow.

Believing that all literature and all education are only useful so far as they tend to confirm this calm, beneficent, and *therefore* kingly, power—first, over ourselves, and, through ourselves, over all around us, I am now going to ask you to consider with me further, what special portion or kind of this royal authority arising out of noble education may rightly be possessed by women; and how far they also are called to a true queenly power. Not in their households merely, but over all within their sphere. And in what sense, if they rightly understood and exercised this royal or gracious influence, the order and beauty induced by such benignant power would justify us in speaking of the territories over which each of them reigned, as “Queens' Gardens.”

And here, in the very outset, we are met by a far deeper question, which—strange though this may seem—remains among many of us yet quite undecided, in spite of its infinite importance.

We cannot determine what the queenly power of women should be, until we are agreed what their ordinary power should be. We cannot

consider how education may fit them for any widely extending duty, until we are agreed what is their true constant duty. And there never was a time when wilder words were spoken, or more vain imagination permitted, respecting this question—quite vital to all social happiness. The relations of the womanly to the manly nature, their different capacities of intellect or of virtue, seem never to have been yet measured with entire consent. We hear of the mission and of the rights of Woman, as if these could ever be separate from the mission and the rights of Man ; as if she and her lord were creatures of independent kind and of irreconcilable claim. This, at least, is wrong. And not less wrong—perhaps even more foolishly wrong (for I will anticipate thus far what I hope to prove)—is the idea that woman is only the shadow and attendant image of her lord, owing him a thoughtless and servile obedience, and supported altogether in her weakness by the pre-eminence of his fortitude.

This, I say, is the most foolish of all errors

respecting her who was made to be the helpmate of man. As if he could be helped effectively by a shadow, or worthily by a slave !

Let us try, then, whether we cannot get at some clear and harmonious idea (it must be harmonious if it is true) of what womanly mind and virtue are in power and office, with respect to man's ; and how their relations, rightly accepted, aid, and increase, the vigour and honour, and authority of both.

And now I must repeat one thing I said in the last lecture : namely, that the first use of education was to enable us to consult with the wisest and the greatest men on all points of earnest difficulty. That to use books rightly, was to go to them for help : to appeal to them, when our knowledge and power of thought failed ; to be led by them into wider sight, purer conception than our own, and receive from them the united sentence of the judges and councils of all time, against our solitary and unstable opinion.

Let us do this now. Let us see whether the greatest, the wisest, the purest-hearted of all ages are agreed in any wise on this point : let us hear the testimony they have left respecting what they held to be the true dignity of woman, and her mode of help to man.

And first let us take Shakespeare.

Note broadly in the outset, Shakespeare has no heroes ;—he has only heroines. There is not one entirely heroic figure in all his plays, except the slight sketch of Henry the Fifth, exaggerated for the purposes of the stage ; and the still slighter Valentine in “The Two Gentlemen of Verona.” In his laboured and perfect plays you have no hero. Othello would have been one, if his simplicity had not been so great as to leave him the prey of every base practice around him ; but he is the only example even approximating to the heroic type. Coriolanus—Cæsar—Antony, stand in flawed strength, and fall by their vanities ;—Hamlet is indolent, and drowsily speculative ; Romeo an impatient boy ; the Merchant of

Venice languidly submissive to adverse fortune ; Kent, in " King Lear," is entirely noble at heart, but too rough and unpolished to be of true use at the critical time, and he sinks into the office of a servant only. Orlando, no less noble, is yet the despairing toy of chance, followed, comforted, saved, by Rosalind. Whereas there is hardly a play that has not a perfect woman in it, steadfast in grave hope, and errorless purpose ; Cordelia, Desdemona, Isabella, Hermione, Imogen, Queen Katherine, Perdita, Sylvia, Viola, Rosalind, Helena, and last, and perhaps loveliest, Virgilia, all are faultless ; conceived in the highest heroic type of humanity.

Then observe, secondly,

The catastrophe of every play is caused always by the folly or fault of a man ; the redemption, if there be any, is by the wisdom and virtue of a woman ; and, failing that, there is none. The catastrophe of King Lear is owing to his own want of judgment, his impatient vanity, his misunderstanding of his children ; the virtue of

his one true daughter would have saved him from all the injuries of the others, unless he had cast her away from him ; as it is, she all but saves him.

Of Othello, I need not trace the tale ;—nor the one weakness of his so mighty love ; nor the inferiority of his perceptive intellect to that even of the second woman character in the play, the Emilia who dies in wild testimony against his error :— “ Oh, murderous coxcomb ! What should such a fool do with so good a wife ? ”

In “ Romeo and Juliet,” the wise and entirely brave statagem of the wife is brought to ruinous issue by the reckless impatience of her husband. In “ Winter’s Tale,” and in “ Cymbeline,” the happiness and existence of two princely households, lost through long years, and imperilled to the death by the folly and obstinacy of the husbands, are redeemed at last by the queenly patience and wisdom of the wives. In “ Measure for Measure,” the injustice of the judges, and the corrupt cowardice of the brother, are opposed to

the victorious truth and adamant purity of a woman. In "Coriolanus," the mother's counsel, acted upon in time, would have saved her son from all evil; his momentary forgetfulness of it is his ruin; her prayer, at last granted, saves him—not, indeed, from death, but from the curse of living as the destroyer of his country.

And what shall I say of Julia, constant against the fickleness of a lover who is a mere wicked child?—of Helena, against the petulance and insult of a careless youth?—of the patience of Hero, the passion of Beatrice, and the calmly devoted wisdom of the "unlessoned girl," who appears among the helplessness, the blindness, and the vindictive passions of men, as a gentle angel, to save merely by her presence, and defeat the worst intensities of crime by her smile?

Observe, further, among all the principal figures in Shakespeare's plays, there is only one weak woman—Ophelia; and it is because

she fails Hamlet at the critical moment, and is not, and cannot in her nature be, a guide to him when he needs her most, that all the bitter catastrophe follows. Finally, though there are three wicked women among the principal figures, Lady Macbeth, Regan, and Goneril, they are felt at once to be frightful exceptions to the ordinary laws of life; fatal in their influence also in proportion to the power for good which they have abandoned.

Such, in broad light, is Shakespeare's testimony to the position and character of women in human life. He represents them as infallibly faithful and wise counsellors,—incorruptibly just and pure examples—strong always to sanctify even when they cannot save.

Not as in any wise comparable in knowledge of the nature of man,—still less in his understanding of the causes and courses of fate,—but only as the writer who has given us the broadest view of the conditions and modes of ordinary thought in modern society, I ask

you next to receive the witness of Walter Scott.

I put aside his merely romantic prose writings as of no value : and though the early romantic poetry is very beautiful, its testimony is of no weight, other than that of a boy's ideal. But his true works, studied from Scottish life, bear a true witness, and in the whole range of these there are but three men who reach the heroic type—Dandie Dinmont, Rob Roy, and Claverhouse : of these, one is a border farmer ; another a freebooter ; the third a soldier in a bad cause. And these touch the ideal of heroism only in their courage and faith, together with a strong, but uncultivated, or mistakenly applied, intellectual power ; while his younger men are the gentlemanly playthings of fantastic fortune, and only by aid (or accident) of that fortune, survive, not vanquish, the trials they involuntarily sustain. Of any disciplined, or consistent character, earnest in a purpose wisely conceived, or dealing with forms of hostile evil, definitely challenged,

and resolutely subdued, there is no trace in his conceptions of men. Whereas in his imaginations of women,—in the characters of Ellen Douglas, of Flora MacIvor, Rose Bradwardine, Catherine Seyton, Diana Vernon, Lilies Redgauntlet, Alice Bridgenorth, Alice Lee, and Jeanie Deans,—with endless varieties of grace, tenderness, and intellectual power, we find in all a quite infallible and inevitable sense of dignity and justice; a fearless, instant, and untiring self-sacrifice to even the appearance of duty, much more to its real claims; and, finally, a patient wisdom of deeply restrained affection, which does infinitely more than protect its objects from a momentary error; it gradually forms, animates, and exalts the characters of the unworthy lovers, until, at the close of the tale, we are just able and no more, to take patience in hearing of their unmerited success.

So that in all cases, with Scott as with Shakespeare, it is the woman who watches

over, teaches, and guides the youth; it is never, by any chance, the youth who watches over or educates his mistress.

Next, take, though more briefly, graver and deeper testimony—that of the great Italians and Greeks. You know well the plan of Dante's great poem—that it is a love-poem to his dead lady, a song of praise for her watch over his soul. Stooping only to pity, never to love, she yet saves him from destruction—saves him from hell. He is going eternally astray in despair; she comes down from heaven to his help, and throughout the ascents of Paradise is his teacher, interpreting for him the most difficult truths, divine and human: and leading him, with rebuke upon rebuke, from star to star.

I do not insist upon Dante's conception; if I began I could not cease: besides, you might think this a wild imagination of one poet's heart. So I will rather read to you a few verses of the deliberate writing of a knight of

Pisa to his living lady, wholly characteristic of the feeling of all the noblest men of the thirteenth century, preserved among many other such records of knightly honour and love, which Dante Rossetti has gathered for us from among the early Italian poets.

For lo ! thy law is passed
 That this my love should manifestly be
 To serve and honour thee :
 And so I do ; and my delight is full,
 Accepted for the servant of thy rule.

Without almost, I am all rapturous,
 Since thus my will was set
 To serve, thou flower of joy, thine excellence :
 Nor ever seems it anything could rouse
 A pain or regret,
 But on thee dwells mine every thought and sense ;
 Considering that from thee all virtues spread
 As from a fountain head,—
That in thy gift is wisdom's best avail,
 And honour without fail ;
 With whom each sovereign good dwells separate,
 Fulfilling the perfection of thy state.

Lady, since I conceived
Thy pleasurable aspect in my heart,
My life has been apart
In shining brightness and the place of truth;
Which till that time, good sooth,
Groped among shadows in a darken'd place,
Where many hours and days
It hardly ever had remember'd good.
But now my servitude
Is thine, and I am full of joy and rest.
A man from a wild beast
Thou madest me, since for thy love I lived.

You may think, perhaps, a Greek knight would have had a lower estimate of women than this Christian lover. His own spiritual subjection to them was indeed not so absolute; but as regards their own personal character, it was only because you could not have followed me so easily, that I did not take the Greek women instead of Shakespeare's; and instance, for chief ideal types of human beauty and faith, the simple mother's and wife's heart of Andromache; the divine, yet rejected wisdom

of Cassandra ; the playful kindness and simple princess-life of happy Nausicaa ; the housewifely calm of that of Penelope, with its watch upon the sea ; the ever patient, fearless, hopelessly devoted piety of the sister, and daughter, in Antigone ; the bowing down of Iphigenia, lamb-like and silent ; and, finally, the expectation of the resurrection, made clear to the soul of the Greeks in the return from her grave of that Alcestis, who, to save her husband, had passed calmly through the bitterness of death.

Now I could multiply witness upon witness of this kind upon you if I had time. I would take Chaucer, and show you why he wrote a Legend of Good Women ; but no Legend of Good Men. I would take Spenser, and show you how all his fairy knights are sometimes deceived and sometimes vanquished ; but the soul of Una is never darkened, and the spear of Britomart is never broken. Nay, I could go back into the mythical teaching of the most

ancient times, and show you how the great people, — by one of whose princesses it was appointed that the Lawgiver of all the earth should be educated, rather than by his own kindred ; — how that great Egyptian people, wisest then of nations, gave to their Spirit of Wisdom the form of a woman ; and into her hand, for a symbol, the weaver's shuttle : and how the name and the form of that spirit, adopted, believed, and obeyed by the Greeks, became that Athena of the olive-helm, and cloudy shield, to whose faith you owe, down to this date, whatever you hold most precious in art, in literature, or in types of national virtue.

But I will not wander into this distant and mythical element ; I will only ask you to give its legitimate value to the testimony of these great poets and men of the world, — consistent as you see it is on this head. I will ask you whether it can be supposed that these men, in the main work of their lives, are amusing themselves with

a fictitious and idle view of the relations between man and woman ;—nay, worse than fictitious or idle ; for a thing may be imaginary, yet desirable, if it were possible ; but this, their ideal of women, is, according to our common idea of the marriage relation, wholly undesirable. The woman, we say, is not to guide, nor even to think, for herself. The man is always to be the wiser ; he is to be the thinker, the ruler, the superior in knowledge and discretion, as in power.

Is it not somewhat important to make up our minds on this matter ? Are all these great men mistaken, or are we ? Are Shakespeare and Æschylus, Dante and Homer, merely dressing dolls for us ; or, worse than dolls, unnatural visions, the realisation of which, were it possible, would bring anarchy into all households and ruin into all affections ? Nay, if you could suppose this, take lastly the evidence of facts, given by the human heart itself. In all Christian ages which have been remarkable for their purity or progress, there has been absolute yielding of

obedient devotion, by the lover, to his mistress I say *obedient*—not merely enthusiastic and worshipping in imagination, but entirely subject, receiving from the beloved woman, however young, not only the encouragement, the praise, and the reward of all toil, but, so far as any choice is open or any question difficult of decision, the *direction* of all toil. That chivalry, to the abuse and dishonour of which are attributable primarily whatever is cruel in war, unjust in peace, or corrupt and ignoble in domestic relations; and to the original purity and power of which we owe the defence alike of faith, of law, and of love;—that chivalry, I say, in its very first conception of honourable life, assumes the subjection of the young knight to the command—should it even be the command in caprice—of his lady. It assumes this, because its masters knew that the first and necessary impulse of every truly taught and knightly heart is this of blind service to its lady: that where that true faith and

captivity are not, all wayward and wicked passion must be ; and that in this rapturous obedience to the single love of his youth, is the sanctification of all man's strength, and the continuance of all his purposes. And this, not because such obedience would be safe, or honourable, were it ever rendered to the unworthy ; but because it ought to be impossible for every noble youth—it is impossible for every one rightly trained—to love any one whose gentle counsel he cannot trust, or whose prayerful command he can hesitate to obey.

I do not insist by any further argument on this, for I think it should commend itself at once to your knowledge of what has been and to your feeling of what should be. You cannot think that the buckling on of the knight's armour by his lady's hand was a mere caprice of romantic fashion. It is the type of an eternal truth—that the soul's armour is never well set to the heart unless a woman's hand has braced it ; and it is only when she braces it loosely that the honour

of manhood fails. Know you not those lovely lines—I would they were learned by all youthful ladies of England :

Ah, wasteful woman ! she who may
On her sweet self set her own price,
Knowing he cannot choose but pay—
How has she cheapen'd Paradise !
How given for nought her priceless gift,
How spoiled the bread and spill'd the wine,
Which, spent with due, respective thrift,
Had made brutes men, and men divine ! *

Thus much, then, respecting the relations of lovers I believe you will accept. But what we too often doubt is the fitness of the continuance of such a relation throughout the whole of human life. We think it right in the lover and mistress, not in the husband and wife. That is to say, we think that a reverent and tender duty is due to one whose affection we still doubt, and whose character we as yet do but partially and distantly

* Coventry Patmore.

discern ; and that this reverence and duty are to be withdrawn when the affection has become wholly and limitlessly our own, and the character has been so sifted and tried that we fear not to entrust it with the happiness of our lives. Do you not see how ignoble this is, as well as how unreasonable? Do you not feel that marriage—when it is marriage at all—is only the seal which marks the vowed transition of temporary into untiring service, and of fitful into eternal love?

But how, you will ask, is the idea of this guiding function of the woman reconcilable with a true wifely subjection? Simply in that it is a *guiding*, not a determining function. Let me try to show you briefly how these powers seem to be rightly distinguishable.

We are foolish, and without excuse foolish, in speaking of the “superiority” of one sex to the other, as if they could be compared in similar things. Each has what the other has not: each completes the other, and is completed by the

other : they are in nothing alike, and the happiness and perfection of both depend on each asking and receiving from the other what the other only can give.

Now their separate characters are briefly these. The man's power is active, progressive, defensive. He is eminently the doer, the creator, the discoverer, the defender. His intellect is for speculation and invention ; his energy for adventure, for war, and for conquest, wherever war is just, wherever conquest necessary. But the woman's power is for rule, not for battle,—and her intellect is not for invention or creation, but for sweet ordering, arrangement, and decision. She sees the qualities of things, their claims and their places. Her great function is Praise : she enters into no contest, but infallibly adjudges the crown of contest. By her office, and place, she is protected from all danger and temptation. The man, in his rough work in open world, must encounter all peril and trial :—to him, therefore, the failure, the offence, the inevitable error : after

he must be wounded, or subdued, often misled and *always* hardened. But he guards the woman from all this; within his house, as ruled by her, unless she herself has sought it, need enter no danger, no temptation, no cause of error or offence. This is the true nature of home—it is the place of Peace; the shelter, not only from all injury, but from all terror, doubt, and division. In so far as it is not this it is not home; so far as the anxieties of the outer life penetrate into it, and the inconsistently-minded, unknown, unloved, or hostile society of the outer world is allowed by either husband or wife to cross the threshold, it ceases to be home; it is then only a part of that outer world which you have roofed over, and lighted fire in. But so far as it is a sacred place, a vestal temple, a temple of the hearth watched over by Household Gods, before whose faces none may come but those whom they can receive with love,—so far as it is this, and roof and fire are types only of a nobler shade and light,—shade as of the rock in a weary land, and

light as of the Pharos in the stormy sea ;—so far it vindicates the name, and fulfils the praise, of home.

And wherever a true wife comes, this home is always round her. The stars only may be over her head ; the glow-worm in the night-cold grass may be the only fire at her foot : but home is yet wherever she is ; and for a noble woman it stretches far round her, better than ceiled with cedar, or painted with vermilion, shedding its quiet light far, for those who else were homeless.

This, then, I believe to be,—will you not admit it to be,—the woman's true place and power ? But do not you see that to fulfil this, she must— as far as one can use such terms of a human creature—be incapable of error ? So far as she rules, all must be right, or nothing is. She must be enduringly, incorruptibly good ; instinctively, infallibly wise—wise, not for self-development, but for self-renunciation : wise, not that she may set herself above her husband, but that she may never fail from his side : wise, not

with the narrowness of insolent and loveless pride, but with the passionate gentleness of an infinitely variable, because infinitely applicable, modesty of service—the true changefulness of woman. In that great sense—“*La donna è mobile,*” not “*Qual piùm' al vento*”; no, nor yet “*Variable as the shade, by the light quivering aspen made*”; but variable as the *light*, manifold in fair and serene division, that it may take the colour of all that it falls upon, and exalt it.

II. I have been trying, thus far, to show you what should be the place, and what the power, of woman. Now, secondly, we ask, What kind of education is to fit her for these?

And if you indeed think this a true conception of her office and dignity, it will not be difficult to trace the course of education which would fit her for the one, and raise her to the other.

The first of our duties to her—no thoughtful persons now doubt this,—is to secure for her such physical training and exercise as may

confirm her health, and perfect her beauty, the highest refinement of that beauty being unattainable without splendour of activity and of delicate strength. To perfect her beauty, I say, and increase its power ; it cannot be too powerful, nor shed its sacred light too far : only remember that all physical freedom is vain to produce beauty without a corresponding freedom of heart. There are two passages of that poet who is distinguished, it seems to me, from all others—not by power, but by exquisite *rightness*—which point you to the source, and describe to you in a few syllables, the completion of womanly beauty. I will read the introductory stanzas, but the last is the one I wish you specially to notice :

Three years she grew in sun and shower.

Then Nature said, ' A lovelier flower

On earth was never sown.

This child I to myself will take ;

She shall be mine, and I will make

A lady of my own.

‘Myself will to my darling be
 Both law and impulse ; and with me
 The girl, in rock and plain,
 In earth and heaven, in glade and bower,
 Shall feel an overseeing power
 To kindle, or restrain.

‘The floating clouds their state shall lend
 To her, for her the willow bend ;
 Nor shall she fail to see
 Even in the motions of the storm,
 Grace that shall mould the maiden’s form
 By silent sympathy.

‘And *vital feelings of delight*
 Shall rear her form to stately height,—
 Her virgin bosom swell.
 Such *thoughts* to Lucy I will give,
 While she and I together live,
 Here in this happy dell.’

“*Vital feelings of delight*,” observe. There are deadly feelings of delight ; but the natural ones are vital, necessary to very life.

And they must be feelings of delight, if they are to be vital. Do not think you can make a girl lovely, if you do not make her happy. There is not one restraint you put on a good girl's nature—there is not one check you give to her instincts of affection or of effort—which will not be indelibly written on her features, with a hardness which is all the more painful because it takes away the brightness from the eyes of innocence, and the charm from the brow of virtue.

This for the means : now note the end. Take from the same poet, in two lines, a perfect description of womanly beauty :

A countenance in which did meet
Sweet records, promises as sweet.

The perfect loveliness of a woman's countenance can only consist in that majestic peace which is founded in the memory of the happy and useful years,—full of sweet records ; and from the joining of this with that yet more majestic

childishness, which is still full of change and promise ;— opening always — modest at once, and bright, with hope of better things to be won, and to be bestowed. There is no old age where there is still that promise—it is eternal youth.

Thus, then, you have first to mould her physical frame, and then, as the strength she gains will permit you, to fill and temper her mind with all knowledge and thoughts which tend to confirm its natural instincts of justice, and refine its natural tact of love.

All such knowledge should be given her as may enable her to understand, and even to aid, the work of men : and yet it should be given, not as knowledge,—not as if it were, or could be, for her an object to know ; but only to feel, and to judge. It is of no moment, as a matter of pride or perfectness in herself, whether she knows many languages or one ; but it is of the utmost, that she should be able to show kindness to a stranger, and to understand the sweetness of a stranger's

tongue. It is of no moment to her own worth or dignity that she should be acquainted with this science or that ; but it is of the highest that she should be trained in habits of accurate thought ; that she should understand the meaning, the inevitableness, and the loveliness of natural laws, and follow at least some one path of scientific attainment, as far as to the threshold of that bitter Valley of Humiliation, into which only the wisest and bravest of men can descend, owning themselves for ever children, gathering pebbles on a boundless shore. It is of little consequence how many positions of cities she knows, or how many dates of events, or how many names of celebrated persons—it is not the object of education to turn a woman into a dictionary ; but it is deeply necessary that she should be taught to enter with her whole personality into the history she reads ; to picture the passages of it vitally in her own bright imagination ; to apprehend, with her fine instincts, the pathetic circumstances and dramatic relations, which the historian too often only

eclipses by his reasoning, and disconnects by his arrangement: it is for her to trace the hidden equities of divine reward, and catch sight, through the darkness, of the fateful threads of woven fire that connect error with its retribution. But, chiefly of all, she is to be taught to extend the limits of her sympathy with respect to that history which is being for ever determined, as the moments pass in which she draws her peaceful breath; and to the contemporary calamity which, were it but rightly mourned by her, would recur no more hereafter. She is to exercise herself in imagining what would be the effects upon her mind and conduct, if she were daily brought into the presence of the suffering which is not the less real because shut from her sight. She is to be taught somewhat to understand the nothingness of the proportion which that little world in which she lives and loves, bears to the world in which God lives and loves;—and solemnly she is to be taught to strive that her thoughts of piety may not be feeble in proportion to the number they

embrace, nor her prayer more languid than it is for the momentary relief from pain of her husband or her child, when it is uttered for the multitudes of those who have none to love them,—and is “for all who are desolate and oppressed.”

Thus far, I think, I have had your concurrence; perhaps you will not be with me in what I believe is most needful for me to say. There is one dangerous science for women—one which let them indeed beware how they profanely touch—that of theology. Strange, and miserably strange that while they are modest enough to doubt their powers, and pause at the threshold of sciences where every step is demonstrable and sure, they will plunge headlong, and without one thought of incompetency, into that science in which the greatest men have trembled, and the wisest erred. Strange, that they will complacently and pridefully bind up whatever vice or folly there is in them, whatever arrogance, petulance, or blind incomprehensiveness, into one bitter bundle of consecrated myrrh. Strange, in creatures born

to be Love visible, that where they can know least, they will condemn first, and think to recommend themselves to their Master by scrambling up the steps of His judgment-throne, to divide it with Him. Most strange, that they should think they were led by the Spirit of the Comforter into habits of mind which have become in them the unmixed elements of home discomfort ; and that they dare to turn the Household Gods of Christianity into ugly idols of their own—spiritual dolls, for them to dress according to their caprice ; and from which their husbands must turn away in grieved contempt, lest they should be shrieked at for breaking them.

I believe, then, with this exception, that a girl's education should be nearly, in its course and material of study, the same as a boy's ; but quite differently directed. A woman in any rank of life ought to know whatever her husband is likely to know, but to know it in a different way. His command of it should be foundational

and progressive, hers, general and accomplished for daily and helpful use. Not but that it would often be wiser in men to learn things in a womanly sort of way, for present use, and to seek for the discipline and training of their mental powers in such branches of study as will be afterwards fittest for social service ; but, speaking broadly, a man ought to know any language or science he learns, thoroughly, while a woman ought to know the same language, or science, only so far as may enable her to sympathise in her husband's pleasures, and in those of his best friends.

Yet, observe, with exquisite accuracy as far as she reaches. There is a wide difference between elementary knowledge and superficial knowledge—between a firm beginning, and a feeble smattering. A woman may always help her husband by what she knows, however little ; by what she half-knows, or mis-knows, she will only tease him.

And, indeed, if there were to be any difference

between a girl's education and a boy's, I should say that of the two the girl should be earlier led, as her intellect ripens faster, into deep and serious subjects ; and that her range of literature should be, not more, but less frivolous, calculated to add the qualities of patience and seriousness to her natural poignancy of thought and quickness of wit ; and also to keep her in a lofty and pure element of thought. I enter not now into any question of choice of books ; only be sure that her books are not heaped up in her lap as they fall out of the package of the circulating library, wet with the last and lightest spray of the fountain of folly.

Or even of the fountain of wit ; for with respect to that sore temptation of novel-reading, it is not the badness of a novel that we should dread, but its over-wrought interest. The weakest romance is not so stupefying as the lower forms of religious, exciting literature, and the worse romance is not so corrupting as false history, false philosophy, or false political essays. But the best

romance becomes dangerous, if, by its excitement, it renders the ordinary course of life uninteresting, and increases the morbid thirst for useless acquaintance with scenes in which we shall never be called upon to act.

I speak, therefore, of good novels, only ; and our modern literature is particularly rich in types of such. Well read, indeed, these books have serious use, being nothing less than treatises on moral anatomy and chemistry ; studies of human nature in the elements of it. But I attach little weight to this function ; they are hardly ever read with earnestness enough to permit them to fulfil it. The utmost they usually do is to enlarge somewhat the charity of a kind reader, or the bitterness of a malicious one ; for each will gather, from the novel, food for her own disposition. Those who are naturally proud and envious will learn from Thackeray to despise humanity ; those who are naturally gentle, to pity it ; those who are naturally shallow, to laugh at it. So, also, there might be a serviceable

power in novels to bring before us, in vividness, a human truth which we had before dimly conceived; but the temptation to picturesqueness of statement is so great, that often the best writers of fiction cannot resist it; and our views are rendered so violent and one-sided, that their vitality is rather a harm than good.

Without, however, venturing here on any attempt at decision how much novel-reading should be allowed, let me at least clearly assert this, that whether novels, or poetry, or history be read, they should be chosen, not for what is *out* of them, but for what is *in* them. The chance and scattered evil that may here and there haunt, or hide itself in, a powerful book, never does any harm to a noble girl; but the emptiness of an author oppresses her, and his amiable folly degrades her. And if she can have access to a good library of old and classical books, there need be no choosing at all. Keep the modern magazine and novel out of your girl's way: turn

her loose into the old library every wet day, and let her alone. She will find what is good for her ; you cannot : for there is just this difference between the making of a girl's character and a boy's—you may chisel a boy into shape, as you would a rock, or hammer him into it, if he be of a better kind, as you would a piece of bronze. But you cannot hammer a girl into anything. She grows as a flower does,—she will wither without sun ; she will decay in her sheath, as the narcissus does, if you do not give her air enough ; she may fall, and defile her head in dust, if you leave her without help at some moments of her life ; but you cannot fetter her ; she must take her own fair form and way, if she take any, and in mind as in body, must have always

Her household motions light and free
And steps of virgin liberty.

Let her loose in the library, I say, as you do a fawn in a field. It knows the bad weeds twenty

times better than you ; and the good ones too, and will eat some bitter and prickly ones, good for it, which you had not the slightest thought were good.

Then, in art, keep the finest models before her, and let her practice in all accomplishments be accurate and thorough, so as to enable her to understand more than she accomplishes. I say the finest models—that is to say, the truest, simplest, usefulest. Note those epithets ; they will range through all the arts. Try them in music, where you might think them the least applicable. I say the truest, that in which the notes most closely and faithfully express the meaning of the words, or the character of intended emotion ; again, the simplest, that in which the meaning and melody are attained with the fewest and most significant notes possible ; and, finally, the usefulest, that music which makes the best words most beautiful, which enchants them in our memories each with its own glory of sound, and which applies them

closest to the heart at the moment we need them.

And not only in the material and in the course, but yet more earnestly in the spirit of it, let a girl's education be as serious as a boy's. You bring up your girls as if they were meant for sideboard ornaments, and then complain of their frivolity. Give them the same advantages that you give their brothers—appeal to the same grand instincts of virtue in them; teach *them* also that courage and truth are the pillars of their being: do you think that they would not answer that appeal, brave and true as they are even now, when you know that there is hardly a girl's school in this Christian kingdom where the children's courage or sincerity would be thought of half so much importance as their way of coming in at a door, and when the whole system of society, as respects the mode of establishing them in life, is one rotten plague of cowardice and imposture—cowardice, in not daring to let them live, or

love, except as their neighbours choose; and imposture, in bringing, for the purposes of our own pride, the full glow of the world's worst vanity upon a girl's eyes, at the very period when the whole happiness of her future existence depends upon her remaining undazzled?

And give them, lastly, not only noble teachings, but noble teachers. You consider somewhat before you send your boy to school, what kind of a man the master is;—whatsoever kind of a man he is, you at least give him full authority over your son, and show some respect to him yourself; if he comes to dine with you, you do not put him at a side table; you know also that, at his college, your child's immediate tutor will be under the direction of some still higher tutor, for whom you have absolute reverence. You do not treat the Dean of Christ Church or the Master of Trinity as your inferiors.

But what teachers do you give your girls,

and what reference do you show to the teachers you have chosen? Is a girl likely to think her own conduct, or her own intellect, of much importance, when you trust the entire formation of her character, moral and intellectual, to a person whom you let your servants treat with less respect than they do your housekeeper (as if the soul of your child were a less charge than jams and groceries), and whom you yourself think you confer an honour upon by letting her sometimes sit in the drawing-room in the evening?

Thus, then, of literature as her help, and thus of art. There is one more help which she cannot do without — one which, alone, has sometimes done more than all other influences besides,—the help of wild and fair nature. Hear this of the education of Joan of Arc :—

The education of this poor girl was mean, according to the present standard; was ineffably grand, according to a purer philosophic standard; and only

not good for our age, because for us it would be unattainable. . . .

Next after her spiritual advantages, she owed most to the advantages of her situation. The fountain of Domrémy was on the brink of a boundless forest; and it was haunted to that degree by fairies, that the parish priest (*cure*) was obliged to read mass there once a year, in order to keep them in any decent bounds. . . .

But the forests of Domrémy—those were the glories of the land, for in them abode mysterious powers and ancient secrets that towered into tragic strength. “Abbeys there were, and abbey windows,”—“like Moorish temples of the Hindoos,” that exercised even princely power both in Touraine and in the German Diets. These had their sweet bells that pierced the forests for many a league at matins or vespers, and each its own dreamy legend. Few enough, and scattered enough were these abbeys, so as in no degree to disturb the deep solitude of the region; yet many enough to spread a network or awning of Christian sanctity over what else might have seemed a heathen wilderness.*

* “Joan of Arc: in reference to M. Michelet’s *History of France*.” De Quincey’s *Works*, vol. iii. p. 217.

Now, you cannot, indeed, have here in England, woods eighteen miles deep to the centre ; but you can, perhaps, keep a fairy or two for your children yet, if you wish to keep them. But *do* you wish it? Suppose you had each, at the back of your houses, a garden large enough for your children to play in, with just as much lawn as would give them room to run,—no more—and that you could not change your abode ; but that, if you chose, you could double your income, or quadruple it, by digging a coal-shaft in the middle of the lawn, and turning the flower-beds into heaps of coke. Would you do it? I think not. I can tell you, you would be wrong if you did, though it gave you income sixtyfold instead of fourfold.

Yet this is what you are doing with all England. The whole country is but a little garden, not more than enough for your children to run on the lawns of, if you would let them *all* run there. And this little garden you will turn into furnace-ground, and fill with heaps of

cinders, if you can ; and those children of yours, not you, will suffer for it. For the fairies will not be all banished ; there are fairies of the furnace as of the wood, and their first gifts seem to be “sharp arrows of the mighty” ; but their last gifts are “coals of juniper.”

And yet I cannot—though there is no part of my subject that I feel more—press this upon you ; for we made so little use of the power of nature while we had it, that we shall hardly feel what we have lost. Just on the other side of the Mersey you have your Snowdon and your Menai Straits, and that mighty granite rock beyond the moors of Anglesea, splendid in its heathery crest, and foot planted in the deep sea, once thought of as sacred—a divine promontory, looking westward ; the Holy Head or Headland, still not without awe when its red light glares first through storm. These are the hills, and these the bays and blue inlets, which, among the Greeks, would have been always loved, always fateful in influence on the national mind.

That Snowdon is your Parnassus; but where are its Muses? That Holyhead mountain is your Island of Ægina, but where is its Temple to Minerva?

Shall I read you what the Christian Minerva had achieved under the shadow of our Parnassus, up to the year 1848?—Here is a little account of a Welsh school, from page 261 of the Report on Wales, published by the Committee of Council on Education. This is a school close to a town containing 5000 persons:

I then called up a larger class, most of whom had recently come to the school. Three girls repeatedly declared they had never heard of Christ, and two that they had never heard of God. Two out of six thought Christ was on earth now ("they might have had a worse thought, perhaps"), three knew nothing about the crucifixion. Four out of seven did not know the names of the months, nor the number of days in a year. They had no notion of addition beyond two and two, or three and three; their minds were perfect blanks.

Oh, ye women of England ! from the Princess of that Wales to the simplest of you, do not think your own children can be brought into their true fold of rest while these are scattered on the hills, as sheep having no shepherd. And do not think your daughters can be trained to the truth of their own human beauty, while the pleasant places, which God made at once for their school-room and their playground, lie desolate and defiled. You cannot baptize them rightly in those inch-deep fonts of yours, unless you baptize them also in the sweet waters which the great Lawgiver strikes forth for ever from the rocks of your native land—waters which a Pagan would have worshipped in their purity, and you worship only with pollution. You cannot lead your children faithfully to those narrow axe-hewn church altars of yours, while the dark azure altars in heaven—the mountains that sustain your island throne, — mountains on which a Pagan would have seen the powers of heaven rest in every wreathed cloud—remain for you

without inscription; altars built, not to, but by, an Unknown God.

III. Thus far, then, of the nature, thus far of the teaching, of woman, and thus of her household office, and queenliness. We come now to our last, our widest question,—What is her queenly office, with respect to the state?

Generally, we are under an impression that a man's duties are public, and a woman's private. But this is not altogether so. A man has a personal work or duty, relating to his own home, and a public work or duty, which is the expansion of the other, relating to the state. So a woman has a personal work or duty, relating to her own home, and a public work and duty, which is also the expansion of that.

Now the man's work for his own home is, as has been said, to secure its maintenance, progress, and defence; the woman's to secure its order, comfort, and loveliness.

Expand both these functions. The man's duty as a member of a commonwealth, is to assist in

the maintenance, in the advance, in the defence of the state. The woman's duty as a member of the commonwealth, is to assist in the ordering, in the comforting, and in the beautiful adornment of the state.

What the man is at his own gate, defending it, if need be, against insult and spoil, that also, not in a less, but in a more devoted measure, he is to be at the gate of his country, leaving his home, if need be, even to the spoiler, to do his more incumbent work there.

And, in like manner, what the woman is to be within her gates, as the centre of order, the balm of distress, and the mirror of beauty; that she is also to be without her gates, where order is more difficult, distress more imminent, loveliness more rare.

And as within the human heart there is always set an instinct for all its real duties,—an instinct which you cannot quench, but only warp and corrupt if you withdraw it from its true purpose;—as there is the intense instinct of love, which,

rightly disciplined, maintains all the sanctities of life, and, misdirected, undermines them ; and *must* do either the one or the other ; so there is in the human heart an inextinguishable instinct, the love of power, which, rightly directed, maintains all the majesty of law and life, and, misdirected, wrecks them.

Deep rooted in the innermost life of the heart of man, and of the heart of woman, God set it there, and God keeps it there. Vainly, as falsely, you blame or rebuke the desire of power !—for Heaven's sake, and for Man's sake, desire it all you can. But *what* power? That is all the question. Power to destroy? the lion's limb, and the dragon's breath? Not so. Power to heal, to redeem, to guide, and to guard. Power of the sceptre and shield ; the power of the royal hand that heals in touching,—that binds the fiend and looses the captive ; the throne that is founded on the rock of Justice, and descended from only by steps of mercy. Will you not covet such power as this, and seek such throne

as this, and be no more housewives, but queens?

It is now long since the women of England arrogated universally a title which once belonged to nobility only, and, having once been in the habit of accepting the simple title of gentlewoman, as correspondent to that of gentleman, insisted on the privilege of assuming the title of "Lady,"* which properly corresponds only to the title of "Lord."

I do not blame them for this: but only for their narrow motive in this. I would have them desire and claim the title of Lady, provided they claim, not merely the title, but the office and duty signified by it. Lady means "bread-giver"

* I wish there were a true order of chivalry instituted for our English youth of certain ranks, in which both boy and girl should receive, at a given age, their knighthood and ladyhood by true title; attainable only by certain probation and trial both of character and accomplishment; and to be forfeited, on conviction, by their peers, of any dishonourable act. Such an institution would be entirely, and with all noble results, possible, in a nation which loved honour. That it would not be possible among us is not to be the discredit of the scheme.

or "loaf-giver," and Lord means "maintainer of laws," and both titles have reference, not to the law which is maintained in the house, nor to the bread which is given to the household; but to law maintained for the multitude, and to bread broken among the multitude. So that a Lord has legal claim only to his title in so far as he is the maintainer of the justice of the Lord of Lords; and a Lady has legal claim to her title, only so far as she communicates that help to the poor representatives of her Master, which women once, ministering to Him of their substance, were permitted to extend to that Master Himself; and when she is known, as He Himself once was, in breaking of bread.

And this beneficent and legal dominion, this power of the Dominus, or House-Lord, and of the Domina, or House-Lady, is great and venerable, not in the number of those through whom it has lineally descended, but in the number of those whom it grasps within its sway; it is always regarded with reverent

worship wherever its dynasty is founded on its duty, and its ambition correlative with its beneficence. Your fancy is pleased with the thought of being noble ladies with a train of vassals. Be it so; you cannot be too noble, and your train cannot be too great; but see to it that your train is of vassals whom you serve and feed, not merely of slaves who serve and feed *you*; and that the multitude which obeys you is of those whom you have comforted, not oppressed,—whom you have redeemed, not led into captivity.

And this, which is true of the lower or household dominion, is equally true of the queenly dominion;—that highest dignity is open to you, if you will also accept that highest duty. Rex et Regina—Roi et Reine—“*Right-doers*”; they differ but from the Lady and Lord in that their power is supreme over the mind as over the person—that they not only feed and clothe, but direct and teach. And whether consciously or not, you must be, in many a

heart, enthroned : there is no putting by that crown ; queens you must always be ; queens to your lovers ; queens to your husbands and your sons ; queens of higher mystery to the world beyond, which bows itself, and will for ever bow, before the myrtle crown, and the stainless sceptre, of womanhood. But, alas ! you are too often idle and careless queens, grasping at majesty in the least things, while you abdicate it in the greatest ; and leaving misrule and violence to work their will among men, in defiance of the power, which, holding straight in gift from the Prince of all Peace, the wicked among you betray, and the good forget.

“ Prince of Peace.” Note that name. When kings rule in that name, and nobles, and the judges of the earth, they also, in their narrow place, and mortal measure, receive the power of it. There are no other rulers than they ; other rule than theirs is but *misrule* ; they who govern verily “ *Dei gratiâ* ” are all princes, yes, or princesses, of peace. There is not a war in the

world, no, nor an injustice, but you women are answerable for it; not in that you have provoked, but in that you have not hindered. Men, by their nature, are prone to fight; they will fight for any cause, or for none. It is for you to choose their cause for them, and to forbid them when there is no cause. There is no suffering, no injustice, no misery in the earth, but the guilt of it lies lastly with you. Men can bear the sight of it, but you should not be able to bear it. Men may tread it down without sympathy in their own struggle; but men are feeble in sympathy, and contracted in hope; it is you only who can feel the depths of pain; and conceive the way of its healing. Instead of trying to do this, you turn away from it; you shut yourselves within your park walls and garden gates; and you are content to know that there is beyond them a whole world in wilderness—a world of secrets which you dare not penetrate; and of suffering which you dare not conceive.

I tell you that this is to me quite the most

amazing among the phenomena of humanity. I am surprised at no depths to which, when once warped from its honour, that humanity can be degraded. I do not wonder at the miser's death, with his hands, as they relax, dropping gold. I do not wonder at the sensualist's life, with the shroud wrapped about his feet. I do not wonder at the single-handed murder of a single victim, done by the assassin in the darkness of the railway, or reed-shadow of the marsh. I do not even wonder at the myriad-handed murder of multitudes, done boastfully in the daylight by the frenzy of nations, and the immeasurable, unimaginable guilt, heaped up from hell to heaven, of their priests, and kings. But this is wonderful to me—oh, how wonderful!—to see the tender and delicate woman among you, with her child at her breast, and a power, if she would wield it, over it, and over its father, purer than the air of heaven, and stronger than the seas of earth—nay, a magnitude of blessing which her husband would not part with for all that earth itself, though it

were made of one entire chrysolite:—to see her abdicate this majesty to play at precedence with her next-door neighbour! This is wonderful—oh, wonderful!—to see her, with every innocent feeling fresh within her, go out in the morning into her garden to play with the fringes of its guarded flowers, and lift their heads when they are drooping, with her happy smile upon her face, and no cloud upon her brow, because there is a little wall around her place of peace: and yet she knows, in her heart, if she would only look for its knowledge, that, outside of that little rose-covered wall, the wild grass, to the horizon, is torn up by the agony of men, and beat level by the drift of their life-blood.

Have you ever considered what a deep under-meaning there lies, or, at least, may be read, if we choose, in our custom of strewing flowers before those whom we think most happy? Do you suppose it is merely to deceive them into the hope that happiness is always to fall thus in showers at their feet?—that wherever they pass

they will tread on herbs of sweet scent, and that the rough ground will be made smooth for them by depth of roses? So surely as they believe that, they will have, instead, to walk on bitter herbs and thorns; and the only softness to their feet will be of snow. But it is not thus intended they should believe; there is a better meaning in that old custom. The path of a good woman is indeed strewn with flowers; but they rise behind her steps, not before them. "Her feet have touched the meadows, and left the daisies rosy."

You think that only a lover's fancy;—false and vain! How if it could be true? You think this also, perhaps, only a poet's fancy—

Even the light harebell raised its head

Elastic from her airy tread.

But it is little to say of a woman, that she only does not destroy where she passes. She should revive; the harebells should bloom, not stoop, as she passes. You think I am going into wild hyperbole? Pardon me, not a whit—I mean

what I say in calm English, spoken in resolute truth. You have heard it said—(and I believe there is more than fancy even in that saying, but let it pass for a fanciful one)—that flowers only flourish rightly in the garden of some one who loves them. I know you would like that to be true; you would think it a pleasant magic if you could flush your flowers into brighter bloom by a kind look upon them: nay, more, if your look had the power, not only to cheer, but to guard them—if you could bid the black blight turn away, and the knotted caterpillar spare—if you could bid the dew fall upon them in the drought, and say to the south wind, in frost—“Come, thou south, and breathe upon my garden, that the spices of it may flow out.” This you would think a great thing? And do you think it not a greater thing, that all this (and how much more than this!) you *can* do, for fairer flowers than these—flowers that could bless you for having blessed them, and will love you for having loved them;—flowers that have eyes like yours, and thoughts

like yours, and lives like yours; which, once saved, you save for ever? Is this only a little power? Far among the moorlands and the rocks—far in the darkness of the terrible streets,—these feeble florets are lying, with all their fresh leaves torn, and their stems broken—will you never go down to them, nor set them in order in their little fragrant beds, nor fence them in their shuddering from the fierce wind? Shall morning follow morning for you, but not for them; and the dawn rise to watch, far away, those frantic Dances of Death; * but no dawn rise to breathe upon these living banks of wild violet, and woodbine, and rose; nor call to you, through your casement,—call (not giving you the name of the English poet's lady, but the name of Dante's great Matilda, who, on the edge of happy Lethe, stood, wreathing flowers with flowers), saying:

Come into the garden, Maud,
For the black bat, night, has flown,
And the woodbine spices are wafted abroad
And the musk of roses blown?

* See note, p. 72.

Will you not go down among them?—among those sweet living things, whose new courage, sprung from the earth with the deep colour of heaven upon it, is starting up in strength of goodly spire; and whose purity, washed from the dust, is opening, bud by bud, into the flower of promise—and still they turn to you, and for you, “The Larkspur listens—I hear, I hear! And the Lily whispers—I wait.”

Did you notice that I missed two lines when I read you that first stanza; and think that I had forgotten them? Hear them now:—

Come into the garden, Maud,
For the black bat, night, has flown;
Come into the garden, Maud,
I am here at the gate alone.

Who is it, think you, who stands at the gate of this sweeter garden, alone, waiting for you? Did you ever hear, not of a Maud, but a Madeleine, who went down to her garden in the

dawn, and found One waiting at the gate, whom she supposed to be the gardener? Have you not sought Him often;—sought Him in vain, all through the night;—sought Him in vain at the gate of that old garden where the fiery sword is set? He is never there; but at the gate of *this* garden He is waiting always—waiting to take your hand—ready to go down to see the fruits of the valley, to see whether the vine has flourished, and the pomegranate budded. There you shall see with Him the little tendrils of the vines that His hand is guiding—there you shall see the pomegranate springing where His hand cast the sanguine seed;—more: you shall see the troops of the angel keepers that, with their wings, wave away the hungry birds from the pathsides where He has sown, and call to each other between the vineyard rows, “Take us the foxes, the little foxes, that spoil the vines, for our vines have tender grapes.” Oh—you queens—you queens! among the hills and happy greenwood of this

land of yours, shall the foxes have holes, and the birds of the air have nests; and, in your cities, shall the stones cry out against you, that they are the only pillows where the Son of Man can lay His head?

THE
POLITICAL ECONOMY OF ART

CONTENTS.

LECTURE I.	9
LECTURE II.	81
ADDENDA.	163

LECTURE I.

LECTURE I.

AMONG the various characteristics of the age in which we live, as compared with other ages of this not yet *very* experienced world, one of the most notable appears to me to be the just and wholesome contempt in which we hold poverty. I repeat, the *just* and *wholesome* contempt; though I see that some of my hearers look surprised at the expression. I assure them, I use it in sincerity; and I should not have ventured to ask you to listen to me this evening, unless I had entertained a profound respect for wealth—true wealth, that is to say; for, of course, we ought to respect neither wealth nor anything else that is false of its kind: and the distinction between real and false wealth is one of the points on which I shall have a few words presently to say to you. But true wealth I hold, as I said, in great honour; and sympathise, for the most part, with that extraordinary feeling of the present age which publicly pays this honour to riches. I cannot, however, help noticing how extraordinary it is, and how this epoch of ours differs from all bygone epochs in having no philosophical

10 POLITICAL ECONOMY OF ART.

nor religious worshippers of the ragged godship of poverty. In the classical ages, not only there were people who voluntarily lived in tubs, and who used gravely to maintain the superiority of tub-life to town-life, but the Greeks and Latins seem to have looked on these eccentric, and I do not scruple to say, absurd people, with as much respect as we do upon large capitalists and landed proprietors; so that really, in those days, no one could be described as purse proud, but only as empty-purse proud. And no less distinct than the honour which those curious Greek people pay to their conceited poor, is the disrespectful manner in which they speak of the rich; so that one cannot listen long either to them, or to the Roman writers who imitated them, without finding oneself entangled in all sorts of plausible absurdities; hard upon being convinced of the uselessness of collecting that heavy yellow substance which we call gold, and led generally to doubt all the most established maxims of political economy. Nor are matters much better in the middle ages. For the Greeks and Romans contented themselves with mocking at rich people, and constructing merry dialogues

between Charon and Diogenes or Menippus, in which the ferryman and the cynic rejoiced together as they saw kings and rich men coming down to the shore of Acheron, in lamenting and lamentable crowds, casting their crowns into the dark waters, and searching, sometimes in vain, for the last coin out of all their treasures that could ever be of use to them. But these Pagan views of the matter were indulgent, compared with those which were held in the middle ages, when wealth seems to have been looked upon by the best men not only as contemptible, but as criminal. The purse round the neck is, then, one of the principal signs of condemnation in the pictured Inferno; and the Spirit of Poverty is revered with subjection of heart, and faithfulness of affection, like that of a loyal knight for his lady, or a loyal subject for his queen. And truly, it requires some boldness to quit ourselves of these feelings, and to confess their partiality or their error, which, nevertheless, we are certainly bound to do. For wealth is simply one of the greatest powers which can be intrusted to human hands: a power, not indeed to be envied, because it seldom makes us happy; but still less to be

abdicated or despised ; while, in these days, and in this country, it has become a power all the more notable, in that the possessions of a rich man are not represented, as they used to be, by wedges of gold or coffers of jewels, but by masses of men variously employed, over whose bodies and minds the wealth, according to its direction, exercises harmful or helpful influence, and becomes, in that alternative, Mammon either of Unrighteousness or of Righteousness.

Now, it seemed to me that since, in the name you have given to this great gathering of British pictures, you recognise them as Treasures—that is, I suppose, as part and parcel of the real wealth of the country—you might not be uninterested in tracing certain commercial questions connected with this particular form of wealth. Most persons express themselves as surprised at its quantity ; not having known before to what an extent good art had been accumulated in England : and it will, therefore, I should think, be held a worthy subject of consideration, what are the political interests involved in such accumulations ; what kind of labour they represent, and how this labour may in general be applied and

economised, so as to produce the richest results.

Now, you must have patience with me, if in approaching the speciality of this subject, I dwell a little on certain points of general political science already known or established : for though thus, as I believe, established, some which I shall have occasion to rest arguments on are not yet by any means universally accepted ; and therefore, though I will not lose time in any detailed defence of them, it is necessary that I should distinctly tell you in what form I receive, and wish to argue from them ; and this the more, because there may perhaps be a part of my audience who have not interested themselves in political economy, as it bears on ordinary fields of labour, but may yet wish to hear in what way its principles can be applied to Art. I shall, therefore, take leave to trespass on your patience with a few elementary statements in the outset, and with the expression of some general principles, here and there, in the course of our particular inquiry.

To begin, then, with one of these necessary truisms : all economy, whether of states,

households, or individuals, may be defined to be the art of managing labour. The world is so regulated by the laws of Providence, that a man's labour, well applied, is always amply sufficient to provide him during his life with all things needful to him, and not only with those, but with many pleasant objects of luxury; and yet further, to procure him large intervals of healthful rest and serviceable leisure. And a nation's labour, well applied, is in like manner amply sufficient to provide its whole population with good food and comfortable habitation; and not with those only, but with good education besides, and objects of luxury, art treasures, such as these you have around you now. But by those same laws of Nature and Providence, if the labour of the nation or of the individual be misapplied, and much more if it be insufficient,—if the nation or man be indolent and unwise,—suffering and want result, exactly in proportion to the indolence and improvidence—to the refusal of labour, or to the misapplication of it. Wherever you see want, or misery, or degradation, in this world about

you, there, be sure, either industry has been wanting, or industry has been in error. It is not accident, it is not Heaven-commanded calamity, it is not the original and inevitable evil of man's nature, which fill your streets with lamentation, and your graves with prey. It is only that, when there should have been providence, there has been waste; when there should have been labour, there has been lasciviousness; and wilfulness, when there should have been subordination.*

Now, we have warped the word "economy" in our English language into a meaning which it has no business whatever to bear. In our use of it, it constantly signifies merely sparing or saving; economy of money means saving money—economy of time, sparing time, and so on. But that is a wholly barbarous use of the word—barbarous in a double sense, for it is not English, and it is bad Greek; barbarous in a treble sense, for it is not English, it is bad Greek, and it is worse sense. Economy no more means saving money than it means

* Proverbs xiii. 23: "Much food is in the tillage of the poor, but there is that is destroyed for want of judgment."

spending money. It means, the administration of a house ; its stewardship ; spending or saving, that is, whether money or time, or anything else, to the best possible advantage. In the simplest and clearest definition of it, economy, whether public or private, means the wise management of labour ; and it means this mainly in three senses ; namely, first, *applying* your labour rationally ; secondly, *preserving* its produce carefully ; lastly, *distributing* its produce seasonably.

I say first, applying your labour rationally ; that is, so as to obtain the most precious things you can, and the most lasting things, by it : not growing oats in land where you can grow wheat, nor putting fine embroidery on a stuff that will not wear. Secondly, preserving its produce carefully ; that is to say, laying up your wheat wisely in storehouses for the time of famine, and keeping your embroidery watchfully from the moth : and lastly, distributing its produce seasonably ; that is to say, being able to carry your corn at once to the place where the people are hungry, and your embroideries to the places where they are gay ; so fulfilling in

all ways the Wise Man's description, whether of the queenly housewife or queenly nation. "She riseth while it is yet night, and giveth meat to her household, and a portion to her maidens. She maketh herself coverings of tapestry, her clothing is silk and purple. Strength and honour are in her clothing, and she shall rejoice in time to come."

Now, you will observe that in this description of the perfect economist, or mistress of a household, there is a studied expression of the balanced division of her care between the two great objects of utility and splendour; in her right hand, food and flax, for life and clothing; in her left hand, the purple and the needlework, for honour and for beauty. All perfect housewifery or national economy is known by these two divisions; wherever either is wanting, the economy is imperfect. If the motive of pomp prevails, and the care of the national economist is directed only to the accumulation of gold, and of pictures, and of silk and marble, you know at once that the time must soon come when all these treasures shall be scattered and blasted in national ruin. If, on the contrary,

the element of utility prevails, and the nation disdains to occupy itself in any wise with the arts of beauty or delight, not only a certain quantity of its energy calculated for exercise in those arts alone must be entirely wasted, which is bad economy, but also the passions connected with the utilities of property become morbidly strong, and a mean lust of accumulation merely for the sake of accumulation, or even of labour merely for the sake of labour, will banish at last the serenity and the morality of life, as completely, and perhaps more ignobly, than even the lavishness of pride, and the lightness of pleasure. And similarly, and much more visibly, in private and household economy, you may judge always of its perfectness by its fair balance between the use and the pleasure of its possessions. You will see the wise cottager's garden trimly divided between its well-set vegetables, and its fragrant flowers; you will see the good housewife taking pride in her pretty table-cloth, and her glittering shelves, no less than in her well-dressed dish, and her full store-room; the care in her countenance will alternate with gaiety, and though you will reverence

her in her seriousness, you will know her best by her smile.

Now, as you will have anticipated, I am going to address you, on this and our succeeding evening, chiefly on the subject of that economy which relates rather to the garden than the farm-yard. I shall ask you to consider with me the kind of laws by which we shall best distribute the beds of our national garden, and raise in it the sweetest succession of trees pleasant to the sight, and (in no forbidden sense) to be desired to make us wise. But, before proceeding to open this specialty of our subject, let me pause for a few moments to plead with you for the acceptance of that principle of government or authority which must be at the root of all economy, whether for use or for pleasure. I said, a few minutes ago, that a nation's labour, well applied, was amply sufficient to provide its whole population with good food, comfortable clothing, and pleasant luxury. But the good, instant, and constant application is everything. We must not, when our strong hands are thrown out of work, look wildly about for want of something to do with them. If ever we feel that want, it

is a sign that all our household is out of order. Fancy a farmer's wife, to whom one or two of her servants should come at twelve o'clock at noon, crying that they had got nothing to do; that they did not know what to do next: and fancy still further, the said farmer's wife looking hopelessly about her rooms and yard, they being all the while considerably in disorder, not knowing where to set the spare handmaidens to work, and at last complaining bitterly that she had been obliged to give them their dinner for nothing. That's the type of the kind of political economy we practise too often in England. Would you not at once assert of such a mistress that she knew nothing of her duties?—and would you not be certain, if the household were rightly managed, the mistress would be only too glad at any moment to have the help of any number of spare hands; that she would know in an instant what to set them to; in an instant what part of to-morrow's work might be most serviceably forwarded, what part of next month's work most wisely provided for, or what new task of some profitable kind undertaken?—and when the evening came, and she

dismissed her servants to their recreation or their rest, or gathered them to the reading round the work-table, under the eaves in the sunset, would you not be sure to find that none of them had been overtaken by her, just because none had been left idle; that everything had been accomplished because all had been employed; that the kindness of the mistress had aided her presence of mind, and the slight labour had been entrusted to the weak, and the formidable to the strong; and that as none had been dishonoured by inactivity, so none had been broken by toil?

Now, the precise counterpart of such a household would be seen in a nation in which political economy was rightly understood. You complain of the difficulty of finding work for your men. Depend upon it the real difficulty rather is to find men for your work. The serious question for you is not how many you have to feed, but how much you have to do; it is our inactivity, not our hunger, that ruins us: let us never fear that our servants should have a good appetite—our wealth is in their strength, not in their starvation. Look around this island of yours,

and see what you have to do in it. The sea roars against your harbourless cliffs—you have to build the breakwater, and dig the port of refuge; the unclean pestilence ravins in your streets—you have to bring the full stream from the hills, and to send the free winds through the thoroughfare; the famine blanches your lips and eats away your flesh—you have to dig the moor and dry the marsh, to bid the morass give forth instead of engulfing, and to wring the honey and oil out of the rock. These things, and thousands such, we have to do, and shall have to do constantly, on this great farm of ours; for do not suppose that it is anything else than that. Precisely the same laws of economy which apply to the cultivation of a farm or an estate apply to the cultivation of a province or of an island. Whatever rebuke you would address to the improvident master of an ill-managed patrimony, precisely that rebuke we should address to ourselves, so far as we leave our population in idleness and our country in disorder. What would you say to the lord of an estate who complained to you of his poverty and disabilities, and, when you pointed out to him that

his land was half of it overrun with weeds, and that his fences were all in ruin, and that his cattle-sheds were roofless, and his labourers lying under the hedges faint for want of food, he answered to you that it would ruin him to weed his land or to roof his sheds—that those were too costly operations for him to undertake, and that he knew not how to feed his labourers nor pay them? Would you not instantly answer, that instead of ruining him to weed his fields, it would save him; that his inactivity was his destruction, and that to set his labourers to work was to feed them? Now, you may add acre to acre, and estate to estate, as far as you like, but you will never reach a compass of ground which shall escape from the authority of these simple laws. The principles which are right in the administration of a few fields, are right also in the administration of a great country from horizon to horizon: idleness does not cease to be ruinous because it is extensive, nor labour to be productive because it is universal.

Nay, but you reply, there is one vast difference between the nation's economy and the private man's: the farmer has full authority

over his labourers ; he can direct them to do what is needed to be done, whether they like it or not ; and he can turn them away if they refuse to work, or impede others in their working, or are disobedient, or quarrelsome. There is this great difference ; it is precisely this difference on which I wish to fix your attention, for it is precisely this difference which you have to do away with. We know the necessity of authority in farm, or in fleet, or in army ; but we commonly refuse to admit it in the body of the nation. Let us consider this point a little.

In the various awkward and unfortunate efforts which the French have made at the development of a social system, they have at least stated one true principle, that of fraternity or brotherhood. Do not be alarmed ; they got all wrong in their experiments, because they quite forgot that this fact of fraternity implied another fact quite as important—that of pater-nity, or fatherhood. That is to say, if they were to regard the nation as one family, the condition of unity in that family consisted no less in their having a head, or a father, than

in their being faithful and affectionate members, or brothers. But we must not forget this, for we have long confessed it with our lips, though we refuse to confess it in our lives. For half an hour every Sunday we expect a man in a black gown, supposed to be telling us truth, to address us as brethren, though we should be shocked at the notion of any brotherhood existing among us out of church. And we can hardly read a few sentences on any political subject without running a chance of crossing the phrase "paternal government," though we should be utterly horror-struck at the idea of governments claiming anything like a father's authority over us. Now, I believe those two formal phrases are in both instances perfectly binding and accurate, and that the image of the farm and its servants which I have hitherto used, as expressing a wholesome national organisation, fails only of doing so, not because it is too domestic, but because it is not domestic enough; because the real type of a well-organised nation must be presented, not by a farm cultivated by servants who wrought for hire, and might be turned away if they refused

to labour, but by a farm in which the master was a father, and in which all the servants were sons; which implied, therefore, in all its regulations, not merely the order of expediency, but the bonds of affection and responsibilities of relationship; and in which all acts and services were not only to be sweetened by brotherly concord, but to be enforced by fatherly authority.*

Observe, I do not mean in the least that we ought to place such an authority in the hands of any one person, or of any class or body of persons. But I do mean to say that as an individual who conducts himself wisely must make laws for himself which at some time or other may appear irksome or injurious, but which, precisely at the time they appear most irksome, it is most necessary he should obey, so a nation which means to conduct itself wisely, must establish authority over itself, vested either in kings, councils, or laws, which it must resolve to obey, even at times when the law or authority appears irksome to the body of the people, or injurious to certain masses of

* See note 1st in *Addenda*.

it. And this kind of national law has hitherto been only judicial; contented, that is, with an endeavour to prevent and punish violence and crime: but, as we advance in our social knowledge, we shall endeavour to make our government paternal as well as judicial; that is, to establish such laws and authorities as may at once direct us in our occupations, protect us against our follies, and visit us in our distresses: a government which shall repress dishonesty, as now it punishes theft; which shall show how the discipline of the masses may be brought to aid the toils of peace, as discipline of the masses has hitherto knit the sinews of battle: a government which shall have its soldiers of the ploughshare as well as its soldiers of the sword, and which shall distribute more proudly its golden crosses of industry—golden as the glow of the harvest—than now it grants its bronze crosses of honour, bronzed with the crimson of blood.

I have not, of course, time to insist on the nature or details of government of this kind; only I wish to plead for your several and future consideration of this one truth, that the notion

of Discipline and Interference lies at the very root of all human progress or power; that the "Let alone" principle is, in all things which man has to do with, the principle of death; that it is ruin to him, certain and total, if he lets his land alone—if he lets his fellow-men alone—if he let his own soul alone. That his whole life, on the contrary, must, if it is healthy life, be continually one of ploughing and pruning, rebuking and helping, governing and punishing; and that therefore it is only in the concession of some great principle of restraint and interference in national action that he can ever hope to find the secret of protection against national degradation. I believe that the masses have a right to claim education from their government; but only so far as they acknowledge the duty of yielding obedience to their government. I believe they have a right to claim employment from their governors; but only so far as they yield to the governor the direction and discipline of their labour; and it is only so far as they grant to the men whom they may set over them the father's authority to check the childishnesses of national fancy, and

direct the waywardnesses of national energy, that they have a right to ask that none of their distresses should be unrelieved, none of their weaknesses unwatched; and that no grief, nor nakedness, nor peril should exist for them, against which the father's hand was not outstretched, or the father's shield uplifted.*

Now I have pressed this upon you at more length than is needful or proportioned to our present purposes of inquiry, because I would not for the first time speak to you on this subject

* Compare Wordsworth's *Essay on the Poor-Law Amendment Bill*. I quote one important passage: "But, if it be not safe to touch the abstract question of man's right in a social state to help himself even in the last extremity, may we not still contend for the duty of a Christian government, standing *in loco parentis* towards all its subjects, to make such effectual provision that no one shall be in danger of perishing either through the neglect or harshness of its legislation? Or, waiving this, is it not indisputable that the claim of the State to the allegiance, involves the protection of the subject? And, as all rights in one party impose a correlative duty upon another, it follows that the right of the State to require the services of its members, even to the jeoparding of their lives in the common defence, establishes a right in the people (not to be gainsaid by utilitarians and economists) to public support when, from any cause, they may be unable to support themselves."—(See note 2nd in *Addenda*.)

of political economy without clearly stating what I believe to be its first grand principle. But its bearing on the matter in hand is chiefly to prevent you from at once too violently dissenting from me when what I may state to you as advisable economy in art appears to imply too much restraint or interference with the freedom of the patron or artist. We are a little apt, though, on the whole a prudent nation, to act too immediately on our impulses, even in matters merely commercial; much more in those involving continual appeals to our fancies. How far, therefore, the proposed systems or restraints may be advisable, it is for you to judge; only I pray you not to be offended with them merely because they *are* systems and restraints. Do you at all recollect that interesting passage of Carlyle, in which he compares, in this country and at this day, the understood and commercial value of man and horse; and in which he wonders that the horse, with its inferior brains and its awkward hoofiness, instead of handiness, should be always worth so many tens or scores of pounds in the market, while the man, so far from always commanding his price in the market, would often be

thought to confer a service on the community by simply killing himself out of their way? Well, Carlyle does not answer his own question, because he supposes we shall at once see the answer. The value of the horse consists simply in the fact of your being able to put a bridle on him. The value of the man consists precisely in the same thing. If you can bridle him, or which is better, if he can bridle himself, he will be a valuable creature directly. Otherwise, in a commercial point of view, his value is either nothing, or accidental only. Only, of course, the proper bridle of man is not a leathern one: what kind of texture it is rightly made of, we find from that command: "Be ye not as the horse or as the mule which have no understanding, whose mouths must be held in with bit and bridle." You are not to be without the reins, indeed; but they are to be of another kind; "I will guide thee with mine Eye." So the bridle of man is to be the Eye of God; and if he rejects that guidance, then the next best for him is the horse's and the mule's, which have no understanding: and if he rejects that, and takes the bit fairly in his teeth, then there is

nothing left for him than the blood that comes out of the city, up to the horse-bridles.

Quitting, however, at last these general and serious laws of government—or rather bringing them down to our own business in hand—we have to consider three points of discipline in that particular branch of human labour which is concerned, not with procuring of food, but the expression of emotion; we have to consider respecting art: first, how to apply our labour to it; then, how to accumulate or preserve the results of labour; and then, how to distribute them. But since in art the labour which we have to employ is the labour of a particular class of men—men who have special genius for the business, we have not only to consider how to apply the labour, but first of all, how to produce the labourer; and thus the question in this particular case becomes fourfold; first, how to get your man of genius; then, how to employ your man of genius; then, how to accumulate and preserve his work in the greatest quantity; and lastly, how to distribute his work to the best national advantage. Let us take up these questions in succession.

I. DISCOVERY—How are we to get our men of genius : that is to say, by what means may we produce among us, at any given time, the greatest quantity of effective art-intellect? A wide question, you say, involving an account of all the best means of art-education. Yes, but I do not mean to go into the consideration of those; I want only to state the few principles which lie at the foundation of the matter. Of these, the first is that you have always to find your artist, not to make him; you can't manufacture him, any more than you can manufacture gold. You can find him, and refine him: you dig him out as he lies nugget-fashion in the mountain-stream; you bring him home; and you make him into current coin, or household plate, but not one grain of him can you originally produce. A certain quantity of art-intellect is born annually in every nation, greater or less according to the nature and cultivation of the nation, or race of men; but a perfectly fixed quantity annually, not increasable by one grain. You may lose it, or you may gather it; you may let it lie loose in the ravine, and buried in the sands, or you may make kings' thrones of it, and overlay temple

gates with it, as you choose: but the best you can do with it is always merely sifting, melting, hammering, purifying—never creating. And there is another thing notable about this artistical gold; not only is it limited in quantity, but in use. You need not make thrones or golden gates with it unless you like, but assuredly you can't do anything else with it. You can't make knives of it, nor armour, nor railroads. The gold won't cut you, and it won't carry you: put it to a mechanical use, and you destroy it at once. It is quite true that in the greatest artists, their proper artistical faculty is united with every other; and you may make use of the other faculties, and let the artistical one lie dormant. For aught I know there may be two or three Leonardo da Vincis employed at this moment in your harbours and railroads: but you are not employing their Leonardesque or golden faculty there, you are only oppressing and destroying it. And the artistical gift in average men is not joined with others; your born painter, if you don't make a painter of him, won't be a first-rate merchant, or lawyer; at all events, whatever he turns out, his own special gift is unemployed by

you; and in no wise helps him in that other business. So here you have a certain quantity of a particular sort of intelligence, produced for you annually by providential laws, which you can only make use of by setting it to its own proper work, and which any attempt to use otherwise involves the dead loss of so much human energy. Well then, supposing we wish to employ it, how is it to be best discovered and refined? It is easily enough discovered. To wish to employ it is to discover it. All that you need is, a school of trial * in every important town, in which those idle farmers' lads whom their masters never can keep out of mischief, and those stupid tailors' 'prentices who are always stitching the sleeves in wrong way upwards, may have a try at this other trade; only this school of trial must not be entirely regulated by formal laws of art education, but must ultimately be the workshop of a good master painter, who will try the lads with one kind of art and another, till he finds out what they are fit for. Next, after your trial school, you want your easy and secure employment, which is the matter of chief importance.

* See note 3rd in *Addenda*.

For, even on the present system, the boys who have really intense art capacity, generally make painters of themselves; but then, the best half of their early energy is lost in the battle of life. Before a good painter can get employment, his mind has always been embittered, and his genius distorted. A common mind usually stoops, in plastic chill, to whatever is asked of it, and scrapes or daubs its way complacently into public favour.* But your great men quarrel with you, and you revenge yourselves by starving them for the first half of their lives. Precisely in the degree in which any painter possesses original genius, is at present the increase of moral certainty that during his early years he will have a hard battle to fight; and that just at the time when his conceptions ought to be full and happy, his temper gentle, and his hopes enthusiastic—just at that most critical period, his heart is full of anxieties and household cares; he is chilled by disappointments, and vexed by injustice; he becomes obstinate in his errors, no less than in his virtues, and the arrows of his aims are blunted, as the reeds of his trust are broken.

* See note 4th in *Addenda*.

What we mainly want, therefore, is a means of sufficient and unagitated employment: not holding out great prizes for which young painters are to scramble; but furnishing all with adequate support, and opportunity to display such power as they possess without rejection or mortification. I need not say that the best field of labour of this kind would be presented by the constant progress of public works involving various decoration; and we will presently examine what kind of public works may thus, advantageously for the nation, be in constant progress. But a more important matter even than this of steady employment, is the kind of criticism with which you, the public, receive the works of the young men submitted to you. You may do much harm by indiscreet praise and by indiscreet blame; but remember, the chief harm is always done by blame. It stands to reason that a young man's work cannot be perfect. It *must* be more or less ignorant; it must be more or less feeble; it is likely that it may be more or less experimental, and if experimental, here and there mistaken. If, therefore, you allow yourself to launch out into sudden barking at the first faults you see,

the probability is that you are abusing the youth for some defect naturally and inevitably belonging to that stage of his progress ; and that you might just as rationally find fault with a child for not being as prudent as a privy councillor, or with a kitten for not being as grave as a cat. But there is one fault which you may be quite sure is unnecessary, and therefore a real and blameable fault : that is haste, involving negligence. Whenever you see that a young man's work is either bold or slovenly, then you may attack it firmly : sure of being right. If his work is bold, it is insolent ; repress his insolence : if it is slovenly, it is indolent ; spur his indolence. So long as he works in that dashing or impetuous way, the best hope for him is in your contempt : and it is only by the fact of his seeming not to seek your approbation that you may conjecture he deserves it.

But if he does deserve it, be sure that you give it him, else you not only run a chance of driving him from the right road by want of encouragement, but you deprive yourselves of the happiest privilege you will ever have of rewarding his labour. For it is only the young

who can receive much reward from men's praise : the old, when they are great, get too far beyond and above you to care what you think of them. You may urge them then with sympathy, and surround them then with acclamation ; but they will doubt your pleasure, and despise your praise. You might have cheered them in their race through the asphodel meadows of their youth ; you might have brought the proud, bright scarlet into their faces, if you had but cried once to them, " Well done," as they dashed up to the first goal of their early ambition. But now, their pleasure is in memory, and their ambition is in heaven. They can be kind to you, but you never more can be kind to them. You may be fed with the fruit and fullness of their old age, but you were as the nipping blight to them in their blossoming, and your praise is only as the warm winds of autumn to the dying branches.

There is one thought still, the saddest of all, bearing on this withholding of early help. It is possible, in some noble natures, that the warmth and the affections of childhood may remain unchilled, though unanswered ; and that

the old man's heart may still be capable of gladness, when the long-withheld sympathy is given at last. But in these noble natures it nearly always happens, that the chief motive of earthly ambition has not been to give delight to themselves, but to their parents. Every noble youth looks back, as to the chiefest joy which this world's honour ever gave him, to the moment when first he saw his father's eyes flash with pride, and his mother turn away her head, lest he should take her tears for tears of sorrow. Even the lover's joy, when some worthiness of his is acknowledged before his mistress, is not so great as that, for it is not so pure—the desire to exalt himself in her eyes mixes with that of giving her delight; but he does not need to exalt himself in his parents eyes: it is with the pure hope of giving them pleasure that he comes to tell them what he has done, or what has been said of him; and therefore he has a purer pleasure of his own. And this purest and best of rewards you keep from him if you can: you feed him in his tender youth with ashes and dishonour; and then you come to him, obsequious, but too late, with

your sharp laurel crown, the dew all dried from off its leaves; and you thrust it into his languid hand, and he looks at you wistfully. What shall he do with it? What can he do, but go and lay it on his mother's grave?

Thus, then, you see that you have to provide for your young men: first, the searching or discovering school; then the calm employment; then the justice of praise: one thing more you have to do for them in preparing them for full service — namely, to make, in the noble sense of the word, gentlemen of them; that is to say, to take care that their minds receive such training, that in all they paint they shall see and feel the noblest things. I am sorry to say, that of all parts of an artist's education this is the most neglected among us; and that even where the natural taste and feeling of the youth have been pure and true, where there was the right stuff in him to make a gentleman of, you may too frequently discern some jarring rents in his mind, and elements of degradation in his treatment of subject, owing to want of gentle training, and of the liberal influence of literature. This is quite visible in our greatest

artists, even in men like Turner and Gainsborough; while in the common grade of our second-rate painters the evil attains a pitch which is far too sadly manifest to need my dwelling upon it. Now, no branch of art-economy is more important than that of making the intellect at your disposal pure as well as powerful; so that it may always gather for you the sweetest and fairest things. The same quantity of labour from the same man's hand will, according as you have trained him, produce a lovely and useful work, or a base and hurtful one; and depend upon it, whatever value it may possess, by reason of the painter's skill, its chief and final value, to any nation, depends upon its being able to exalt and refine, as well as to please; and that the picture which most truly deserves the name of an art-treasure, is that which has been painted by a good man.

You cannot but see how far this would lead, if I were to enlarge upon it. I must take it up as a separate subject some other time: only noticing at present that no money could be better spent by a nation than in providing a liberal and disciplined education for its painters, as they advance

into the critical period of their youth ; and that also, a large part of their power during life depends upon the kind of subjects which you, the public, ask them for, and therefore the kind of thoughts with which you require them to be habitually familiar. I shall have more to say on this head when we come to consider what employment they should have in public buildings.

There are many other points of nearly as much importance as these, to be explained with reference to the development of genius ; but I should have to ask you to come and hear six lectures instead of two if I were to go into their detail. For instance, I have not spoken of the way in which you ought to look for those artificers in various manual trades, who, without possessing the order of genius which you would desire to devote to higher purposes, yet possess wit, and humour, and sense of colour, and fancy for form—all commercially valuable as quantities of intellect, and all more or less expressible in the lower arts of ironwork, pottery, decorative sculpture, and such like. But these details, interesting as they are, I must commend to your own consideration, or leave for some future inquiry. I want

just now only to set the bearings of the entire subject broadly before you, with enough of detailed illustration to make it intelligible; and therefore I must quit the first head of it here, and pass to the second, namely, how best to employ the genius we discover. A certain quantity of able hands and heads being placed at our disposal, what shall we most advisedly set them upon?

II. APPLICATION—There are three main points the economist has to attend to in this.

First, To set his men to various work.

Secondly, To easy work.

Thirdly, To lasting work.

I shall briefly touch on the first two, for I want to arrest your attention on the last.

I say first, to various work. Supposing you have two men of equal power as landscape painters—and both of them have an hour at your disposal. You would not set them both to paint the same piece of landscape. You would, of course, rather have two subjects than a repetition of one.

Well, supposing them sculptors, will not

the same rule hold? You naturally conclude at once that it will; but you will have hard work to convince your modern architects of that. They will put twenty men to work, to carve twenty capitals; and all shall be the same. If I could show you the architects' yards in England just now, all open at once, perhaps you might see a thousand clever men, all employed in carving the same design. Of the degradation and deathfulness to the art-intellect of the country involved in such a habit, I have more or less been led to speak before now; but I have not hitherto marked its definite tendency to increase the price of *work*, as such. When men are employed continually in carving the same ornaments, they get into a monotonous and methodical habit of labour—precisely correspondent to that in which they would break stones, or paint house-walls. Of course, what they do so constantly, they do easily; and if you excite them temporarily by an increase of wages, you may get much work done by them in a little time. But, unless so stimulated, men condemned to a monotonous exertion, *work*—and always, by the laws of human nature, *must*

46 POLITICAL ECONOMY OF ART.

work—only at a tranquil rate, not producing by any means a maximum result in a given time. But if you allow them to vary their designs, and thus interest their heads and hearts in what they are doing, you will find them become eager, first, to get their ideas expressed, and then to finish the expression of them; and the moral energy thus brought to bear on the matter quickens, and therefore cheapens, the production in a most important degree. Sir Thomas Deane, the architect of the new Museum at Oxford, told me, as I passed through Oxford on my way here, that he found that, owing to this cause alone, capitals of various design could be executed cheaper than capitals of similar design (the amount of hand labour in each being the same) by about 30 per cent.

Well, that is the first way, then, in which you will employ your intellect well; and the simple observance of this plain rule of political economy will effect a noble revolution in your architecture, such as you cannot at present so much as conceive. Then the second way in which we are to guard against waste is by setting our men to the easiest, and therefore

the quickest, work which will answer the purpose. Marble, for instance, lasts quite as long as granite, and is much softer to work; therefore, when you get hold of a good sculptor, give him marble to carve—not granite. That, you say, is obvious enough. Yes; but it is not so obvious how much of your workmen's time you waste annually in making them cut glass, after it has got hard, when you ought to make them mould it while it is soft. It is not so obvious how much expense you waste in cutting diamonds and rubies, which are the hardest things you can find, into shapes that mean nothing, when the same men might be cutting sandstone and freestone into shapes that meant something. It is not so obvious how much of the artists' time in Italy you waste, by forcing them to make wretched little pictures for you out of crumbs of stone glued together at enormous cost, when the tenth of the time would make good and noble pictures for you out of water-colour. I could go on giving you almost numberless instances of this great commercial mistake; but I should only weary and confuse you. I therefore commend also

this head of our subject to your own meditation, and proceed to the last I named—the last I shall task your patience with to-night. You know we are now considering how to apply our genius, and we were to do it as economists, in three ways :—

To *various* work ;

To *easy* work ;

To *lasting* work.

This lasting of the work, then, is our final question.

Many of you may, perhaps, remember that Michael Angelo was once commanded by Pietro di Medici to mould a statue out of snow, and that he obeyed the command.* I am glad, and we have all reason to be glad, that such a fancy ever came into the mind of the unworthy prince, and for this cause : that Pietro di Medici then gave, at the period of one great epoch of consummate power in the arts, the perfect, accurate, and intensest possible type of the greatest error which nations and princes can commit, respecting the power of genius en-

* See the noble passage on this tradition in *Casa Guidi Windows*.

trusted to their guidance. You had there, observe, the strongest genius in the most perfect obedience; capable of iron independence, yet wholly submissive to the patron's will; at once the most highly accomplished and the most original, capable of doing as much as man could do, in any direction that man could ask. And its governor, and guide, and patron sets it to build a statue in snow—to put itself into the service of annihilation—to make a cloud of itself, and pass away from the earth.

Now this, so precisely and completely done by Pietro di Medici, is what we are all doing, exactly in the degree in which we direct the genius under our patronage to work in more or less perishable materials. So far as we induce painters to work in fading colours, or architects to build with imperfect structure, or in any other way consult only immediate ease and cheapness in the production of what we want, to the exclusion of provident thought as to its permanence and serviceableness in after ages; so far we are forcing our Michael Angelos to carve in snow. The first duty of the economist in art is, to see that no intellect shall thus glitter

merely in the manner of hoar-frost ; but that it shall be well vitrified, like a painted window, and shall be set so between shafts of stone and bands of iron, that it shall bear the sunshine upon it, and send the sunshine through it, from generation to generation.

I can conceive, however, some political economist to interrupt me here, and say “ If you make your art wear too well, you will soon have too much of it ; you will throw your artists quite out of work. Better allow for a little wholesome evanescence—beneficent destruction : let each age provide art for itself, or we shall soon have so many good pictures that we shall not know what to do with them.”

Remember, my dear hearers, who are thus thinking, that political economy, like every other subject, cannot be dealt with effectively if we try to solve two questions at a time instead of one. It is one question, how to get plenty of a thing ; and another, whether plenty of it will be good for us. Consider these two matters separately ; never confuse yourself by interweaving one with the other. It is one question, how to treat your fields so as to get a good

harvest ; another, whether you wish to have a good harvest, or would rather like to keep up the price of corn. It is one question, how to graft your trees so as to grow most apples ; and quite another, whether having such a heap of apples in the storeroom will not make them all rot.

Now, therefore, that we are talking only about grafting and growing, pray do not vex yourselves with thinking what you are to do with the pippins. It may be desirable for us to have much art, or little—we will examine that by and by ; but just now, let us keep to the simple consideration how to get plenty of good art if we want it. Perhaps it might be just as well that a man of moderate income should be able to possess a good picture, as that any work of real merit should cost £500 or £1000 ; at all events, it is certainly one of the branches of political economy to ascertain how, if we like, we can get things in quantities—plenty of corn, plenty of wine, plenty of gold, or plenty of pictures.

It has just been said, that the first great secret is to produce work that will last. Now, the

conditions of work lasting are twofold : it must not only be in materials that will last, but it must be itself of a quality that will last—it must be good enough to bear the test of time. If it is not good, we shall tire of it quickly, and throw it aside—we shall have no pleasure in the accumulation of it. So that the first question of a good art-economist respecting any work is, Will it lose its flavour by keeping? It may be very amusing now, and look much like a work of genius. But what will be its value a hundred years hence?

You cannot always ascertain this. You may get what you fancy to be work of the best quality, and yet find to your astonishment that it won't keep. But of one thing you may be sure, that art which is produced hastily will also perish hastily ; and that what is cheapest to you now, is likely to be dearest in the end.

I am sorry to say, the great tendency of this age is to expend its genius in perishable art of this kind, as if it were a triumph to burn its thoughts away in bonfires. There is a vast quantity of intellect and of labour consumed annually in our cheap illustrated publications ;

you triumph in them ; and you think it so grand a thing to get so many woodcuts for a penny. Why, woodcuts, penny and all, are as much lost to you as if you had invested your money in gossamer. More lost, for the gossamer could only tickle your face, and glitter in your eyes ; it could not catch your feet and trip you up : but the bad art can, and does ; for you can't like good woodcuts as long as you look at the bad ones. If we were at this moment to come across a Titian woodcut, or a Durer woodcut, we should not like it—those of us at least who are accustomed to the cheap work of the day. We don't like, and can't like, *that* long ; but when we are tired of one bad cheap thing, we throw it aside and buy another bad cheap thing ; and so keep looking at bad things all our lives. Now, the very men who do all that quick bad work for us are capable of doing perfect work. Only, perfect work can't be hurried, and therefore it can't be cheap beyond a certain point. But suppose you pay twelve times as much as you do now, and you have one woodcut for a shilling instead of twelve ; and the one woodcut for a shilling is as good as art can be, so that

you will never tire of looking at it ; and is struck on good paper with good ink, so that you will never wear it out by handling it ; while you are sick of your penny-each cuts by the end of the week, and have torn them mostly in half too. Isn't your shilling's worth the best bargain ?

It is not, however, only in getting prints or woodcuts of the best kind that you will practise economy. There is a certain quality about an original drawing which you cannot get in a woodcut, and the best part of the genius of many men is only expressible in original work, whether with pen and ink—pencil or colours. This is not always the case ; but in general, the best men are those who can only express themselves on paper or canvas ; and you will, therefore, in the long run, get most for your money by buying original work ; proceeding on the principle already laid down, that the best is likely to be the cheapest in the end. Of course, original work cannot be produced under a certain cost. If you want a man to make you a drawing which takes him six days, you must, at all events, keep him for six days in

bread and water, fire and lodging ; that is the lowest price at which he can do it for you, but that is not very dear : and the best bargain which can possibly be made honestly in art—the very ideal of a cheap purchase to the purchaser—is the original work of a great man fed for as many days as are necessary on bread and water, or perhaps we may say with as many onions as will keep him in good humour. That is the way by which you will always get most for your money ; no mechanical multiplication or ingenuity of commercial arrangement will ever get you a better penny's worth of art than that.

Without, however, pushing our calculations quite to this prison-discipline extreme, we may lay it down as a rule in art-economy, that original work is, on the whole, cheapest and best worth having. But precisely in proportion to the value of it as a production, becomes the importance of having it executed in permanent materials. And here we come to note the second main error of the day, that we not only ask our workmen for bad art, but we make them put it into bad substance. We have, for example, put a great quantity of

genius, within the last twenty years, into water-colour drawing, and we have done this with the most reckless disregard whether either the colours or the paper will stand. In most instances, neither will. By accident, it may happen that the colours in a given drawing have been of good quality, and its paper uninjured by chemical processes. But you take not the least care to ensure these being so; I have myself seen the most destructive changes take place in water-colour drawings within twenty years after they were painted; and from all I can gather respecting the recklessness of modern paper manufacture, my belief is, that though you may still handle an Albert Durer engraving, two hundred years old, fearlessly, not one-half of that time will have passed over your modern water-colours, before most of them will be reduced to mere white or brown rags; and your descendants, twitching them contemptuously into fragments between finger and thumb, will mutter against you, half in scorn and half in anger: "Those wretched nineteenth century people! they kept vapouring and fuming about the world, doing what they called business, and they

couldn't make a sheet of paper that wasn't rotten." And note that this is no unimportant portion of your art economy at this time. Your water-colour painters are becoming every day capable of expressing greater and better things; and their material is especially adapted to the turn of your best artists' minds. The value which you could accumulate in work of this kind would soon become a most important item in the national art-wealth, if only you would take the little pains necessary to secure its permanence. I am inclined to think, myself, that water-colour ought not to be used on paper at all, but only on vellum, and then, if properly taken care of, the drawing would be almost imperishable. Still, paper is a much more convenient material for rapid work; and it is an infinite absurdity not to secure the goodness of its quality, when we could do so without the slightest trouble. Among the many favours which I am going to ask from our paternal government, when we get it, will be that it will supply its little boys with good paper. You have nothing to do but to let the government establish a paper manufactory, under the superintendence of any of our leading chemists,

who should be answerable for the safety and completeness of all the processes of the manufacture. The government stamp on the corner of your sheet of drawing-paper, made in the perfect way, should cost you a shilling, which would add something to the revenue; and when you bought a water-colour drawing for fifty or a hundred guineas, you would have merely to look in the corner for your stamp, and pay your extra shilling for the security that your hundred guineas were given really for a drawing, and not for a coloured rag. There need be no monopoly or restriction in the matter; let the paper manufacturers compete with the government, and if people liked to save their shilling, and take their chance, let them; only, the artist and purchaser might then be sure of good material, if they liked, and now they cannot be.

I should like also to have a government colour manufactory; though that is not so necessary, as the quality of colour is more within the artist's power of testing, and I have no doubt that any painter may get permanent colour from the respectable manufacturers, if he chooses. I will not attempt to follow the subject out at all as it

respects architecture, and our methods of modern building; respecting which I have had occasion to speak before now.

But I cannot pass without some brief notice of our habit—continually, as it seems to me, gaining strength—of putting a large quantity of thought and work, annually, into things which are either in their nature necessarily perishable, as dress; or else into compliances with the fashion of the day, in things not necessarily perishable, as plate. I am afraid almost the first idea of a young rich couple setting up house in London, is, that they must have new plate. Their father's plate may be very handsome, but the fashion is changed. They will have a new service from the leading manufacturer, and the old plate, except a few apostle spoons, and a cup which Charles the Second drank a health in to their pretty ancestress, is sent to be melted down, and made up with new flourishes and fresh lustre. Now, so long as this is the case—so long, observe, as fashion has influence on the manufacture of plate—so long *you cannot have a goldsmith's art in this country*. Do you suppose any workman worthy the name will put

his brains into a cup or an urn, which he knows is to go to the melting-pot in half a score years? He will not; you don't ask or expect it of him. You ask of him nothing but a little quick handicraft—a clever twist of a handle here, and a foot there, a convolvulus from the newest school of design, a pheasant from Landseer's game cards; a couple of sentimental figures for supporters, in the style of the signs of insurance offices, then a clever touch with the burnisher, and there's your epergne, the admiration of all the footmen at the wedding breakfast, and the torment of some unfortunate youth who cannot see the pretty girl opposite to him, through its tyrannous branches.

But you don't suppose that *that's* goldsmith's work? Goldsmith's work is made to last, and made with the men's whole heart and soul in it; true goldsmith's work, when it exists, is generally the means of education of the greatest painters and sculptors of the day. Francia was a goldsmith; Francia was not his own name, but that of his master the jeweller; and he signed his pictures almost always "Francia, the goldsmith," for love of his master; Ghirlandajo was a goldsmith, and was the master of Michael Angelo; Verrocchio

was a goldsmith, and was the master of Leonardo da Vinci. Ghiberti was a goldsmith, and beat out the bronze gates which Michael Angelo said might serve for gates of Paradise.* But if ever you want work like theirs again, you must keep it, though it should have the misfortune to become old-fashioned. You must not break it up, nor melt it any more. There is no economy in that; you could not easily waste intellect more grievously. Nature may melt her goldsmith's work at every sunset if she chooses; and beat it out into chased bars again at every sunrise; but you must not. The way to have a truly noble service of plate, is to keep adding to it, not melting it. At every marriage, and at every birth, get a new piece of gold or silver if you will, but with noble workmanship on it, done for all time, and

* Several reasons may account for the fact that goldsmith's work is so wholesome for young artists; first, that it gives great firmness of hand to deal for some time with a solid substance; again, that it induces caution and steadiness—a boy trusted with chalk and paper suffers an immediate temptation to scrawl upon it and play with it, but he dares not scrawl on gold, and he cannot play with it: and, lastly, that it gives great delicacy and precision of touch to work upon minute forms, and to aim at producing richness and finish of design correspondent to the preciousness of the material.

put it among your treasures ; that is one of the chief things which gold was made for, and made incorruptible for. When we know a little more of political economy, we shall find that none but partially savage nations need, imperatively, gold for their currency ; * but gold has been given us, among other things, that we might put beautiful work into its imperishable splendour, and that the artists who have the most wilful fancies may have a material which will drag out, and beat out, as their dreams require, and will hold itself together with fantastic tenacity, whatever rare and delicate service they set it upon.

So here is one branch of decorative art in which rich people may indulge themselves unselfishly ; if they ask for good art in it, they may be sure in buying gold and silver plate that they are enforcing useful education on young artists. But there is another branch of decorative art in which I am sorry to say we cannot, at least under existing circumstances, indulge ourselves, with the hope of doing good to anybody, I mean the great and subtle art of dress.

And here I must interrupt the pursuit of our

* See note in *Addenda* on nature of property.

subject for a moment or two, in order to state one of the principles of political economy, which, though it is, I believe, now sufficiently understood and asserted by the leading masters of the science, is not yet, I grieve to say, acted upon by the plurality of those who have the management of riches. Whenever we spend money, we of course set people to work : that is the meaning of spending money ; we may, indeed, lose it without employing anybody ; but, whenever we spend it, we set a number of people to work, greater or less, of course, according to the rate of wages, but, in the long run, proportioned to the sum we spend. Well, your shallow people, because they see that however they spend money they are always employing somebody, and, therefore, doing some good, think and say to themselves, that it is all one *how* they spend it—that all their apparently selfish luxury is, in reality, unselfish, and is doing just as much good as if they gave all their money away, or perhaps more good ; and I have heard foolish people even declare it as a principle of political economy, that whoever invented a new want* conferred a good on the community. I

* See note 5th in *Addenda*.

have not words strong enough—at least I could not, without shocking you, use the words which would be strong enough—to express my estimate of the absurdity and the mischievousness of this popular fallacy. So, putting a great restraint upon myself, and using no hard words, I will simply try to state the nature of it, and the extent of its influence.

Granted, that whenever we spend money for whatever purpose, we set people to work; and, passing by, for the moment, the question whether the work we set them to is all equally healthy and good for them, we will assume that whenever we spend a guinea we provide an equal number of people with healthy maintenance for a given time. But, by the way in which we spend it, we entirely direct the labour of those people during that given time. We become their masters or mistresses, and we compel them to produce, within a certain period, a certain article. Now, that article may be a useful and lasting one, or it may be a useless and perishable one—it may be one useful to the whole community, or useful only to ourselves. And our selfishness and folly, or our virtue and prudence, are shown, not by

our spending money, but by our spending it for the wrong or the right thing ; and we are wise and kind, not in maintaining a certain number of people for a given period, but only in requiring them to produce, during that period, the kind of things which shall be useful to society, instead of those which are only useful to ourselves.

Thus, for instance : if you are a young lady, and employ a certain number of sempstresses for a given time, in making a given number of simple and serviceable dresses, suppose, seven ; of which you can wear one yourself for half the winter, and give six away to poor girls who have none, you are spending your money unselfishly. But if you employ the same number of sempstresses for the same number of days, in making four, or five, or six beautiful flounces for your own ball-dress—flounces which will clothe no one but yourself, and which you will yourself be unable to wear at more than one ball—you are employing your money selfishly. You have maintained, indeed, in each case, the same number of people ; but in the one case you have directed their labour to the service of the community ; in the other case

you have consumed it wholly upon yourself. I don't say you are never to do so ; I don't say you ought not sometimes to think of yourselves only, and to make yourselves as pretty as you can ; only do not confuse coquettishness with benevolence, nor cheat yourselves into thinking that all the finery you can wear is so much put into the hungry mouths of those beneath you : it is not so ; it is what you yourselves, whether you will or no, must sometimes instinctively feel it to be— it is what those who stand shivering in the streets, forming a line to watch you as you step out of your carriages, *know* it to be ; those fine dresses do not mean that so much has been put into their mouths, but that so much has been taken out of their mouths. The real politico-economical signification of every one of those beautiful toilettes is just this ; that you have had a certain number of people put for a certain number of days wholly under your authority, by the sternest of slave-masters—hunger and cold ; and you have said to them : “ I will feed you, indeed, and clothe you, and give you fuel for so many days ; but during those days you shall work for me only : your little brothers need clothes, but you shall make

none for them : your sick friend needs clothes, but you shall make none for her : you yourself will soon need another, and a warmer dress ; but you shall make none for yourself. You shall make nothing but lace and roses for me ; for this fortnight to come, you shall work at the patterns and petals, and then I will crush and consume them away in an hour." You will perhaps answer : " It may not be particularly benevolent to do this, and we won't call it so ; but at any rate we do no wrong in taking their labour when we pay them their wages : if we pay for their work we have a right to it." No ; a thousand times no. The labour which you have paid for, does indeed become, by the act of purchase, your own labour ; you have bought the hands and the time of those workers ; they are, by right and justice, your own hands, your own time. But have you a right to spend your own time, to work with your own hands, only for your own advantage ?—much more, when, by purchase, you have invested your own person with the strength of others ; and added to your own life, a part of the life of others ? You may, indeed, to a certain extent, use their labour for your delight ;

remember, I am making no general assertions against splendour of dress, or pomp of accessories of life; on the contrary, there are many reasons for thinking that we do not at present attach enough importance to beautiful dress, as one of the means of influencing general taste and character. But I *do* say, that you must weigh the value of what you ask these workers to produce for you in its own distinct balance; that on its own worthiness or desirableness rests the question of your kindness, and not merely on the fact of your having employed people in producing it: and I say further, that as long as there are cold and nakedness in the land around you, so long there can be no question at all but that splendour of dress is a crime. In due time, when we have nothing better to set people to work at, it may be right to let them make lace and cut jewels; but, as long as there are any who have no blankets for their beds, and no rags for their bodies, so long it is blanket-making and tailoring we must set people to work at—not lace.

And it would be strange, if at any great assembly which, while it dazzled the young and the thoughtless, beguiled the gentler hearts that

beat beneath the embroidery, with a placid sensation of luxurious benevolence—as if by all that they wore in waywardness of beauty, comfort had been first given to the distressed, and aid to the indigent ; it would be strange, I say, if, for a moment, the spirits of Truth and of Terror, which walk invisibly among the masques of the earth, would lift the dimness from our erring thoughts, and show us how—inasmuch as the sums exhausted for that magnificence would have given back the failing breath to many an unsheltered outcast on moor and street—they who wear it have literally entered into partnership with Death ; and dressed themselves in his spoils. Yes, if the veil could be lifted not only from your thoughts, but from your human sight, you would see—the angels do see—on those gay white dresses of yours, strange dark spots, and crimson patterns that you knew not of—spots of the inextinguishable red that all the seas cannot wash away ; yes, and among the pleasant flowers that crown your fair heads, and glow on your wreathed hair, you would see that one weed was always twisted which no one thought of—the grass that grows on graves.

It was not, however, this last, this clearest and most appalling view of our subject, that I intended to ask you to take this evening; only it is impossible to set any part of the matter in its true light, until we go to the root of it. But the point which it is our special business to consider is, not whether costliness of dress is contrary to charity; but whether it is not contrary to mere worldly wisdom; whether, even supposing we knew that splendour of dress did not cost suffering or hunger, we might not put the splendour better in other things than dress. And, supposing our mode of dress were really graceful or beautiful, this might be a very doubtful question; for I believe true nobleness of dress to be an important means of education, as it certainly is a necessity to any nation which wishes to possess living art, concerned with portraiture of human nature. No good historical painting ever yet existed, or ever can exist, where the dresses of the people of the time are not beautiful: and had it not been for the lovely and fantastic dressing of the 13th to the 16th centuries, neither French, nor Florentine, nor Venetian art could have risen to anything like the rank it reached. Still, even

then, the best dressing was never the costliest; and its effect depended much more on its beautiful and, in early times, modest arrangement, and on the simple and lovely masses of its colour, than on gorgeousness of clasp or embroidery. Whether we can ever return to any of those more perfect types of form, is questionable; but there can be no question, that all the money we spend on the forms of dress at present worn, is, so far as any good purpose is concerned, wholly lost. Mind, in saying this, I reckon among good purposes, the purpose which young ladies are said sometimes to entertain—of being married; but they would be married quite as soon (and probably to wiser and better husbands) by dressing quietly, as by dressing brilliantly: and I believe it would only be needed to lay fairly and largely before them the real good which might be effected by the sums they spend in toilettes, to make them trust at once only to their bright eyes and braided hair for all the mischief they have a mind to. I wish we could, for once, get the statistics of a London season. There was much complaining talk in Parliament last week, of the vast sum the nation

has given for the best Paul Veronese in Venice — £14,000: I wonder what the nation meanwhile has given for its ball-dresses! Suppose we could see the London milliners' bills, simply for unnecessary breadths of slip and flounce, from April to July; I wonder whether £14,000 would cover *them*. But the breadths of slip and flounce are by this time as much lost and vanished as last year's snow; only they have done less good: but the Paul Veronese will last for centuries, if we take care of it; and yet we grumble at the price given for the painting, while no one grumbles at the price of pride.

Time does not permit me to go into any further illustration of the various modes in which we build our statue out of snow, and waste our labour on things that vanish. I must leave you to follow out the subject for yourselves, as I said I should, and proceed, in our next lecture, to examine the two other branches of our subject, namely, how to accumulate our art, and how to distribute it. But, in closing, as we have been much on the topic of good government, both of ourselves and others, let me just give you one more illustration of what it means, from

that old art of which, next evening, I shall try to convince you that the value, both moral and mercantile, is greater than we usually suppose.

One of the frescoes by Ambrozio Lorenzetti, in the town-hall of Siena, represents, by means of symbolical figures, the principles of Good Civic Government and of Good Government in general. The figure representing this noble Civic Government is enthroned, and surrounded by figures representing the Virtues, variously supporting or administering its authority. Now, observe what work is given to each of these virtues. Three winged ones—Faith, Hope, and Charity—surround the head of the figure, not in mere compliance with the common and heraldic laws of precedence among Virtues, such as we moderns observe habitually, but with peculiar purpose on the part of the painter. Faith, as thus represented, ruling the thoughts of the Good Governor, does not mean merely religious faith, understood in those times to be necessary to all persons—governed no less than governors—but it means the faith which enables work to be carried out steadily, in spite of adverse appearances and expediences; the

faith in great principles, by which a civic ruler looks past all the immediate checks and shadows that would daunt a common man, knowing that what is rightly done will have a right issue, and holding his way in spite of pullings at his cloak and whisperings in his ear, enduring, as having in him a faith which is evidence of things unseen. And Hope, in like manner, is here not the heavenward hope which ought to animate the hearts of all men; but she attends upon Good Government, to show that all such government is *expectant* as well as *conservative*; that if it ceases to be hopeful of better things, it ceases to be a wise guardian of present things: that it ought never, 'as long as the world lasts, to be wholly content with any existing state of institution or possession, but to be hopeful still of more wisdom and power; not clutching at it restlessly or hastily, but feeling that its real life consists in steady ascent from high to higher: conservative, indeed, and jealously conservative of old things, but conservative of them as pillars, not as pinnacles—as aids, but not as idols; and hopeful chiefly, and active, in times of national trial or distress, according to those first and

notable words describing the queenly nation. "She riseth, *while it is yet night.*" And again, the winged Charity which is attendant on Good Government has, in this fresco, a peculiar office. Can you guess what? If you consider the character of contest which so often takes place among kings for their crowns, and the selfish and tyrannous means they commonly take to aggrandise or secure their power, you will, perhaps, be surprised to hear that the office of Charity is to crown the King. And yet, if you think of it a little, you will see the beauty of the thought which sets her in this function: since in the first place, all the authority of a good governor should be desired by him only for the good of his people, so that it is only Love that makes him accept or guard his crown: in the second place, his chief greatness consists in the exercise of this love, and he is truly to be revered only so far as his acts and thoughts are those of kindness; so that Love is the light of his crown, as well as the giver of it: lastly, because his strength depends on the affections of his people, and it is only their love which can securely crown him, and for

ever. So that Love is the strength of his crown as well as the light of it.

Then, surrounding the King, or in various obedience to him, appear the dependent virtues, as Fortitude, Temperance, Truth, and other attendant spirits, of all which I cannot now give account, wishing you only to notice the one to whom are entrusted the guidance and administration of the public revenues. Can you guess which it is likely to be? Charity, you would have thought, should have something to do with the business; but not so, for she is too hot to attend carefully to it. Prudence, perhaps, you think of in the next place. No, she is too timid, and loses opportunities in making up her mind. Can it be Liberality then? No: Liberality is entrusted with some small sums; but she is a bad accountant, and is allowed no important place in the exchequer. But the treasures are given in charge to a virtue of which we hear too little in modern times, as distinct from others; Magnanimity: largeness of heart: not softness or weakness of heart, mind you—but capacity of heart—the great *measuring* virtue, which weighs in heavenly

balances all that may be given, and all that may be gained; and sees how to do noblest things in noblest ways: which of two goods comprehends and therefore chooses the greatest: which of two personal sacrifices dares and accepts the largest: which, out of the avenues of beneficence, treads always that which opens farthest into the blue fields of futurity: that character, in fine, which, in those words taken by us at first for the description of a Queen among the nations, looks less to the present power than to the distant promise; "Strength and honour are in her clothing—and she shall rejoice **IN TIME TO COME.**"

LECTURE II.

LECTURE II.

THE heads of our subject which remain for our consideration this evening are, you will remember, the accumulation and the distribution of works of art. Our complete inquiry fell into four divisions—first, how to get our genius; then, how to apply our genius; then, how to accumulate its results; and lastly how to distribute them. We considered, last evening, how to discover and apply it; we have tonight to examine the modes of its preservation and distribution.

And now, in the outset, it will be well to face that objection which we put aside a little while ago; namely, that perhaps it is not well to have a great deal of good art; and that it should not be made too cheap.

“Nay,” I can imagine some of the more generous among you exclaiming, “we will not trouble you to disprove that objection; of course it is a selfish and base one: good art, as well as other good things, ought to be made as cheap as possible, and put as far as we can within the reach of everybody.”

Pardon me, I am not prepared to admit that. I rather side with the selfish objectors, and believe that art ought not to be made cheap, beyond a certain point; for the amount of pleasure that you can receive from any great work, depends wholly on the quantity of attention and energy of mind you can bring to bear upon it. Now, that attention and energy depend much more on the freshness of the thing than you would at all suppose; unless you very carefully studied the movements of your own minds. If you see things of the same kind and of equal value very frequently, your reverence for them is infallibly diminished, your powers of attention get gradually wearied, and your interest and enthusiasm worn out; and you cannot in that state bring to any given work the energy necessary to enjoy it. If, indeed, the question were only between enjoying a great many pictures each a little, or one picture very much, the sum of enjoyment being in each case the same, you might rationally desire to possess rather the larger quantity, than the small; both because one work of art always in some sort illustrates another, and because

quantity diminishes the chances of destruction. But the question is not a merely arithmetical one of this kind. Your fragments of broken admirations will not, when they are put together, make up one whole admiration; two and two, in this case, do not make four, nor anything like four. Your good picture, or book, or work of art of any kind, is always in some degree fenced and closed about with difficulty. You may think of it as of a kind of cocoa-nut, with very often rather an unseemly shell, but good milk and kernel inside. Now, if you possess twenty cocoa-nuts, and being thirsty, go impatiently from one to the other, giving only a single scratch with the point of your knife to the shell of each, you will get no milk from all the twenty. But if you leave nineteen of them alone, and give twenty cuts to the shell of one, you will get through it, and at the milk of it. And the tendency of the human mind is always to get tired before it has made its twenty cuts; and to try another nut; and moreover, even if it has perseverance enough to crack its nuts, it is sure to try to eat too many, and so choke itself. Hence, it is wisely appointed for us that

few of the things we desire can be had without considerable labour, and at considerable intervals of time. We cannot generally get our dinner without working for it, and that gives us appetite for it; we cannot get our holiday without waiting for it, and that gives us zest for it; and we ought not to get our picture without paying for it, and that gives us a mind to look at it. Nay, I will even go so far as to say, that we ought not to get books too cheaply. No book, I believe, is ever worth half so much to its reader as one that has been coveted for a year at a bookstall, and bought out of saved halfpence; and perhaps a day or two's fasting. That's the way to get at the cream of a book. And I should say more on this matter, and protest as energetically as I could against the plague of cheap literature, with which we are just now afflicted, but that I fear your calling me to order, as being unpractical, because I don't quite see my way at present to making everybody fast for their books. But one may see that a thing is desirable and possible, even though one may not at once know the best way to it—and in my

island of Baratavia, when I get it well into order, I assure you no book shall be sold for less than a pound sterling; if it can be published cheaper than that, the surplus shall all go into my treasury, and save my subjects taxation in other directions; only people really poor, who cannot pay the pound, shall be supplied with the books they want for nothing, in a certain limited quantity. I haven't made up my mind about the number yet, and there are several other points in the system yet unsettled; when they are all determined, if you will allow me, I will come and give you another lecture, on the political economy of literature.*

Meantime, returning to our immediate subject, I say to my generous hearers, who want to shower Titians and Turners upon us, like falling leaves, "Pictures ought not to be too cheap"; but in much stronger tone I would say to those who want to keep up the prices of pictorial property, that pictures ought not to be too dear, that is to say, not as dear as they are. For, as matters at present stand, it is wholly

* See note 6th in *Addenda*.

impossible for any man in the ordinary circumstances of English life to possess himself of a piece of great art. A modern drawing of average merit, or a first-class engraving, may perhaps, not without some self-reproach, be purchased out of his savings by a man of narrow income; but a satisfactory example of first-rate art—masterhands' work—is wholly out of his reach. And we are so accustomed to look upon this as the natural course and necessity of things, that we never set ourselves in any wise to diminish the evil; and yet it is an evil perfectly capable of diminution. It is an evil precisely similar in kind to that which existed in the middle ages, respecting good books, and which everybody then, I suppose, thought as natural as we do now our small supply of good pictures. You could not then study the work of a great historian, or great poet, any more than you can now study that of a great painter, but at heavy cost. If you wanted a book, you had to get it written out for you, or to write it out for yourself. But printing came, and the poor man may read his Dante and his Homer; and Dante and Homer are none the worse for that.

But it is only in literature that private persons of moderate fortune can possess and study greatness : they can study at home no greatness in art ; and the object of that accumulation which we are at present aiming at, as our third object in political economy, is to bring great art in some degree within the reach of the multitude ; and, both in larger and more numerous galleries than we now possess, and by distribution, according to his wealth and wish, in each man's home, to render the influence of art somewhat correspondent in extent to that of literature. Here, then, is the subtle balance which your economist has to strike : to accumulate so much art as to be able to give the whole nation a supply of it, according to its need, and yet to regulate its distribution so that there shall be no glut of it, nor contempt.

A difficult balance, indeed, for us to hold, if it were left merely to our skill to poise ; but the just point between poverty and profusion has been fixed for us accurately by the wise laws of Providence. If you carefully watch for all the genius you can detect, apply it to good service, and then reverently preserve what it

produces, you will never have too little art; and if, on the other hand, you never force an artist to work hurriedly, for daily bread, nor imperfectly, because you would rather have showy works than complete ones, you will never have too much. Do not force the multiplication of art, and you will not have it too cheap; do not wantonly destroy it, and you will not have it too dear.

“But who wantonly destroys it?” you will ask. Why, we all do. Perhaps you thought when I came to this part of our subject, corresponding to that set forth in our housewife’s economy by the “keeping her embroidery from the moth,” that I was going to tell you only how to take better care of pictures, how to clean them, and varnish them, and where to put them away safely when you went out of town. Ah, not at all. The utmost I have to ask of you is, that you will not pull them to pieces, and trample them under your feet. “What,” you will say, “when do we do such things? Haven’t we built a perfectly beautiful gallery for all the pictures we have to take care of?” Yes, you have, for the pictures which are

definitely sent to Manchester to be taken care of. But there are quantities of pictures out of Manchester which it is your business, and mine too, to take care of no less than of these, and which we are at this moment employing ourselves in pulling to pieces by deputy. I will tell you what they are, and where they are, in a minute; only first let me state one more of those main principles of political economy on which the matter hinges.

I must begin a little apparently wide of the mark, and ask you to reflect if there is any way in which we waste money more in England, than in building fine tombs? Our respect for the dead, when they are *just* dead, is something wonderful, and the way we show it more wonderful still. We show it with black feathers and black horses; we show it with black dresses and bright heraldries; we show it with costly obelisks and sculptures of sorrow, which spoil half of our most beautiful cathedrals. We show it with frightful gratings and vaults, and lids of dismal stone, in the midst of the quiet grass; and last, and not least, we show it by permitting ourselves to tell any number of lies we

think amiable or credible, in the epitaph. This feeling is common to the poor as well as the rich ; and we all know how many a poor family will nearly ruin themselves, to testify their respect for some member of it in his coffin, whom they never much cared for when he was out of it ; and how often it happens that a poor old woman will starve herself to death, in order that she may be respectably buried.

Now, this being one of the most complete and special ways of wasting money—no money being less productive of good, or of any percentage whatever, than that which we shake away from the ends of undertakers' plumes—it is, of course, the duty of all good economists, and kind persons, to prove and proclaim continually, to the poor as well as the rich, that respect for the dead is not really shown by laying great stones on them to tell us where they are laid ; but by remembering where they are laid, without a stone to help us ; trusting them to the sacred grass and saddened flowers ; and still more, that respect and love are shown to them, not by great monuments to them which we build with *our* hands, but by letting

the monuments stand, which they built with *their own*. And this is the point now in question.

Observe, there are two great reciprocal duties concerning industry, constantly to be exchanged between the living and the dead. We, as we live and work, are to be always thinking of those who are to come after us; that what we do may be serviceable, as far as we can make it so, to them, as well as to us. Then, when we die it is the duty of those who come after us to accept this work of ours with thanks and remembrance, not thrusting it aside or tearing it down the moment they think they have no use for it. And each generation will only be happy or powerful to the pitch that it ought to be, in fulfilling these two duties to the Past and the Future. Its own work will never be rightly done, even for itself—never good, or noble, or pleasurable to its own eyes—if it does not prepare it also for the eyes of generations yet to come. And its own possessions will never be enough for it, and its own wisdom never enough for it, unless it avails itself gratefully and tenderly of the treasures and the wisdom bequeathed to it by its ancestors.

For, be assured, that all the best things and treasures of this world are not to be produced by each generation for itself; but we are all intended, not to carve our work in snow that will melt, but each and all of us to be continually rolling a great white gathering snowball, higher and higher—larger and larger—along the Alps of human power. Thus the science of nations is to be accumulative from father to son: each learning a little more and a little more; each receiving all that was known, and adding its own gain: the history and poetry of nations are to be accumulative; each generation treasuring the history and the songs of its ancestors, adding its own history and its own songs: and the art of nations is to be accumulative, just as science and history are; the work of living men not superseding, but building itself upon the work of the past. Nearly every great and intellectual race of the world has produced, at every period of its career, an art with some peculiar and precious character about it, wholly unattainable by any other race, and at any other time; and the intention of Providence concerning that art, is evidently that it should all grow together into

one mighty temple; the rough stones and the smooth all finding their place, and rising, day by day, in richer and higher pinnacles to heaven.

Now, just fancy what a position the world, considered as one great workroom—one great factory in the form of a globe—would have been in by this time, if it had in the least understood this duty, or been capable of it. Fancy what we should have had around us now, if, instead of quarrelling and fighting over their work, the nations had aided each other in their work, or if even in their conquests, instead of effacing the memorials of those they succeeded and subdued, they had guarded the spoils of their victories. Fancy what Europe would be now, if the delicate statues and temples of the Greeks, if the broad roads and massy walls of the Romans, if the noble and pathetic architecture of the Middle Ages, had not been ground to dust by mere human rage. You talk of the scythe of Time, and the tooth of Time: I tell you, Time is scytheless and toothless; it is we who gnaw like the worm—we who smite like the scythe. It is ourselves who abolish—ourselves who consume:

we are the mildew, and the flame, and the soul of man is to its own work as the moth, that frets when it cannot fly, and as the hidden flame that blasts where it cannot illumine. All these lost treasures of human intellect have been wholly destroyed by human industry of destruction; the marble would have stood its two thousand years as well in the polished statue as in the Parian cliff; but we men have ground it to powder, and mixed it with our own ashes. The walls and the ways would have stood—it is we who have left not one stone upon another, and restored its pathlessness to the desert; the great cathedrals of old religion would have stood—it is we who have dashed down the carved work with axes and hammers, and bid the mountain-grass bloom upon the pavement, and the sea-winds chaunt in the galleries.

You will perhaps think all this was somehow necessary for the development of the human race. I cannot stay now to dispute that, though I would willingly; but do you think it is *still* necessary for that development? Do you think that in this nineteenth century it is still necessary for the European nations to turn all the places

where their principal art-treasures are into battle-fields? For that is what they are doing even while I speak; the great firm of the world is managing its business at this moment, just as it has done in past time. Imagine what would be the thriving circumstances of a manufacturer of some delicate produce—suppose glass, or china—in whose workshop and exhibition rooms all the workmen and clerks began fighting at least once a day, first blowing off the steam, and breaking all the machinery they could reach; and then making fortresses of all the cupboards, and attacking and defending the show-tables, the victorious party finally throwing everything they could get hold of out of the window, by way of showing their triumph, and the poor manufacturer picking up and putting away at last a cup here and a handle there. A fine prosperous business that would be, would it not? and yet that is precisely the way the great manufacturing firm of the world carries on its business.

It has so arranged its political squabbles for the last six or seven hundred years, that not one of them could be fought out but in the midst of

its most precious art ; and it so arranges them to this day. For example, if I were asked to lay my finger, in a map of the world, on the spot of the world's surface which contained at this moment the most singular concentration of art-teaching and art-treasure, I should lay it on the name of the town of Verona. Other cities, indeed, contain more works of carriageable art, but none contain so much of the glorious local art, and of the springs and sources of art, which can by no means be made subjects of package or portorage, nor, I grieve to say, of salvage. Verona possesses, in the first place, not the largest, but the most perfect and intelligible Roman amphitheatre that exists, still unbroken in circle of step, and strong in succession of vault and arch : it contains minor Roman monuments, gateways, theatres, baths, wrecks of temples, which give the streets of its suburbs a character of antiquity unexampled elsewhere, except in Rome itself. But it contains, in the next place, what Rome does not contain—perfect examples of the great twelfth-century Lombardic architecture, which was the root of all the mediæval art of Italy, without which no Giotto,

no Angelicos, no Raphaels would have been possible: it contains that architecture, not in rude forms, but in the most perfect and loveliest types it ever attained—contains those, not in ruins, nor in altered and hardly decipherable fragments, but in churches perfect from porch to apse, with all their carving fresh, their pillars firm, their joints unloosened. Besides these, it includes examples of the great thirteenth and fourteenth-century Gothic of Italy, not merely perfect, but elsewhere unrivalled. At Rome, the Roman—at Pisa, the Lombard, architecture may be seen in greater or in equal nobleness; but not at Rome, nor Pisa, nor Florence, nor in any city of the world, is there a great mediæval Gothic like the Gothic of Verona. Elsewhere, it is either less pure in type or less lovely in completion: only at Verona may you see it in the simplicity of its youthful power, and the tenderness of its accomplished beauty. And Verona possesses, in the last place, the loveliest Renaissance architecture of Italy, not disturbed by pride, nor defiled by luxury, but rising in fair fulfilment of domestic service, serenity of effortless grace, and modesty of home seclusion;

its richest work given to the windows that open on the narrowest streets and most silent gardens. All this she possesses, in the midst of natural scenery such as assuredly exists nowhere else in the habitable globe—a wild Alpine river foaming at her feet, from whose shore the rocks rise in a great crescent, dark with cypress, and misty with olive: illimitably, from before her southern gates, the tufted plains of Italy sweep and fade in golden light; around her, north and west, the Alps crowd in crested troops, and the winds of Benacus bear to her the coolness of their snows.

And this is the city—such, and possessing such things as these—at whose gates the decisive battles of Italy are fought continually: three days her towers trembled with the echo of the cannon of Arcola; heaped pebbles of the Mincio divide her fields to this hour with lines of broken rampart, whence the tide of war rolled back to Novara; and now on that crescent of her eastern cliffs, whence the full moon used to rise through the bars of the cypresses in her burning summer twilights, touching with soft increase of silver light the rosy marbles of her balconies—along

the ridge of that encompassing rock, other circles are increasing now, white and pale ; walled towers of cruel strength, sable-spotted with cannon-courses. I tell you, I have seen, when the thunderclouds came down on those Italian hills, and all their crags were dipped in the dark, terrible purple, as if the winepress of the wrath of God had stained their mountain-raiment—I have seen the hail fall in Italy till the forest branches stood stripped and bare as if blasted by the locust ; but the white hail never fell from those clouds of heaven as the black hail will fall from the clouds of hell, if ever one breath of Italian life stirs again in the streets of Verona.

Sad as you will feel this to be, I do not say that you can directly prevent it ; you cannot drive the Austrians out of Italy, nor prevent them from building forts where they choose. But I do say,* that you, and I, and all of us,

* The reader can hardly but remember Mrs. Browning's beautiful appeal for Italy, made on the occasion of the first great Exhibition of Art in England :

O Magi of the east and of the west,
Your incense, gold, and myrrh are excellent !--
What gifts for Christ, then, bring ye with the rest ?
Your hands have worked well. Is your courage spent

ought to be both acting and feeling with a full knowledge and understanding of these things, and that, without trying to excite revolutions or weaken governments, we may give our own thoughts and help, so as in a measure to prevent

In handwork only? Have you nothing best,
 Which generous souls may perfect and present,
 And He shall thank the givers for? no light
 Of teaching, liberal nations, for the poor,
 Who sit in darkness when it is not night?
 No cure for wicked children? Christ,—no cure,
 No help for women, sobbing out of sight
 Because men made the laws? no brothel-lure
 Burnt out by popular lightnings? Hast thou found
 No remedy, my England, for such woes?
 No outlet, Austria, for the the scourged and bound,
 No call back for the exiled? no repose,
 Russia, for knouted Poles worked underground,
 And gentle ladies bleached among the snows?
 No mercy for the slave, America?
 No hope for Rome, free France, chivalric France?
 Alas, great nations have great shames, I say.
 No pity, O world, no tender utterance
 Of benediction, and prayers stretched this way
 For poor Italia, baffled by mischance?
 O gracious nations, give some ear to me!
 You all go to your Fair, and I am one
 Who at the roadside of humanity
 Beseech your alms,—God's justice to be done.
 So, prosper!

needless destruction. We should do this, if we only realised the thing thoroughly. You drive out day by day through your own pretty suburbs, and you think only of making, with what money you have to spare, your gateways handsomer, and your carriage-drives wider—and your drawing-rooms more splendid, having a vague notion that you are all the while patronising and advancing art, and you make no effort to conceive the fact, that within a few hours' journey of you, there are gateways and drawing-rooms which might just as well be yours as these, all built already; gateways built by the greatest masters of sculpture that ever struck marble; drawing-rooms, painted by Titian and Veronese; and you won't accept, nor save these as they are, but you will rather fetch the house-painter from over the way, and let Titian and Veronese house the rats. "Yes," of course, you answer; "we want nice houses here, not houses in Verona. What should we do with houses in Verona?" And I answer, do precisely what you do with the most expensive part of your possessions here: take pride in them—only a noble pride. You know well,

when you examine your own hearts, that the greater part of the sums you spend on possessions are spent for pride. Why are your carriages nicely painted and finished outside? You don't see the outsides as you sit in them—the outsides are for other people to see. Why are your exteriors of houses so well finished, your furniture so polished and costly, but for other people to see? You are just as comfortable yourselves, writing on your old friend of a desk, with the white cloudings in his leather, and using the light of a window which is nothing but a hole in the brick wall. And all that is desirable to be done in this matter, is merely to take pride in preserving great art, instead of in producing mean art; pride in the possession of precious and enduring things, a little way off, instead of slight and perishing things near at hand. You know, in old English times, our kings liked to have lordships and dukedoms abroad, and why should not you merchant princes like to have lordships and estates abroad? Believe me, rightly understood, it would be a prouder, and in the full sense of our English word, more “respectable” thing

to be lord of a palace at Verona, or of a cloister full of frescoes at Florence, than to have a file of servants dressed in the finest liveries that ever tailor stitched, as long as would reach from here to Bolton—yes, and a prouder thing to send people to travel in Italy, who would have to say every now and then, of some fair piece of art: “Ah! this was *kept* here for us by the good people of Manchester,” than to bring them travelling all the way here, exclaiming of your various art treasures “These were *brought* here for us (not altogether without harm), by the good people of Manchester.” “Ah!” but you say, “the Art Treasures Exhibition will pay; but Veronese palaces won’t.” Pardon me. They *would* pay, less directly, but far more richly. Do you suppose it is in the long run good for Manchester, or good for England, that the Continent should be in the state it is? Do you think the perpetual fear of revolution, or the perpetual repression of thought and energy that clouds and encumbers the nations of Europe, is eventually profitable for *us*? Were we any the better of the course of affairs in '48; or has the stabling

of the dragoon horses in the great houses of Italy, any distinct effect in the promotion of the cotton-trade? Not so. But every stake that you could hold in the stability of the Continent, and every effort that you could make to give example of English habits and principles on the Continent, and every kind deed that you could do in relieving distress and preventing despair on the Continent, would have tenfold reaction on the prosperity of England, and open and urge, in a thousand unforeseen directions, the sluices of commerce and the springs of industry.

I could press, if I chose, both these motives upon you, of pride and self-interest, with more force, but these are not motives which ought to be urged upon you at all. The only motive that I ought to put before you is simply that it would be right to do this; that the holding of property abroad, and the personal efforts of Englishmen to redeem the condition of foreign nations, are among the most direct pieces of duty which our wealth renders incumbent upon us. I do not—and in all truth and deliberateness I say this—I do not know anything more

ludicrous among the self-deceptions of well-meaning people than their notion of patriotism, as requiring them to limit their efforts to the good of their own country; the notion that charity is a geographical virtue, and that what it is holy and righteous to do for people on one bank of a river, it is quite improper and unnatural to do for people on the other. It will be a wonderful thing, some day or other, for the Christian world to remember, that it went on thinking for two thousand years that neighbours were neighbours at Jerusalem, but not at Jericho; a wonderful thing for us English to reflect, in after years, how long it was before we could shake hands with anybody across that shallow salt wash, which the very chalk-dust of its two shores whitens from Folkestone to Ambleteuse.

Nor ought the motive of gratitude, as well as that of mercy, to be without its influence on you, who have been the first to ask to see, and the first to show to us, the treasures which this poor lost Italy has given to England. Remember all these things that delight you here were hers—hers either in fact or in teaching; hers, in fact,

are all the most powerful and most touching paintings of old time that now glow upon your walls; hers in teaching are all the best and greatest of descendant souls—your Reynolds and your Gainsborough never could have painted but for Venice; and the energies which have given the only true life to your existing art were first stirred by voices of the dead, that haunted the Sacred Field of Pisa.

Well, all these motives for some definite course of action on our part towards foreign countries rest upon very serious facts; too serious, perhaps you will think, to be interfered with; for we are all of us in the habit of leaving great things alone, as if Providence would mind them, and attending ourselves only to little things which we know, practically, Providence doesn't mind unless we do. We are ready enough to give care to the growing of pines and lettuces, knowing that they don't grow Providentially sweet or large unless we look after them; but we don't give any care to the good of Italy or Germany, because we think that they will grow Providentially happy without any of our meddling.

Let us leave the great things, then, and think

of little things; not of the destruction of whole provinces in war, which it may not be any business of ours to prevent; but of the destruction of poor little pictures in peace, from which it surely would not be much out of our way to save them. You know I said, just now, we were all of us engaged in pulling pictures to pieces by deputy, and you did not believe me. Consider, then, this similitude of ourselves. Suppose you saw (as I doubt not you often do see) a prudent and kind young lady sitting at work, in the corner of a quiet room, knitting comforters for her cousins, and that just outside, in the hall, you saw a cat and her kittens at play among the family pictures; amusing themselves especially with the best Vandykes, by getting on the tops of the frames, and then scrambling down the canvases by their claws; and on some one's informing the young lady of these proceedings of the cat and kittens, suppose she answered that it wasn't her cat, but her sister's, and the pictures weren't hers, but her uncle's, and she couldn't leave her work, for she had to make so many pairs of comforters before dinner. Would you not say that the prudent and kind young lady

was, on the whole, answerable for the additional touches of claw on the Vandykes? Now, that is precisely what we prudent and kind English are doing, only on a larger scale. Here we sit in Manchester, hard at work, very properly, making comforters for our cousins all over the world. Just outside there in the hall—that beautiful marble hall of Italy—the cats and kittens and monkeys are at play among the pictures: I assure you, in the course of the fifteen years in which I have been working in those places in which the most precious remnants of European art exist, a sensation, whether I would or no, was gradually made distinct and deep in my mind, that I was living and working in the midst of a den of monkeys—sometimes amiable and affectionate monkeys, with all manner of winning ways and kind intentions; more frequently selfish and malicious monkeys, but, whatever their disposition, squabbling continually about nuts, and the best places on the barren sticks of trees; and that all this monkeys' den was filled, by mischance, with precious pictures, and the witty and wilful beasts were always wrapping themselves up and going to sleep in

pictures, or tearing holes in them to grin through; or tasting them and spitting them out again, or twisting them up into ropes and making swings of them; and that sometimes only, by watching one's opportunity, and bearing a scratch or a bite, one could rescue the corner of a Tintoret, or Paul Veronese, and push it through the bars into a place of safety. Literally, I assure you, this was, and this is, the fixed impression on my mind of the state of matters in Italy. And see how. The professors of art in Italy, having long followed a method of study peculiar to themselves, have at last arrived at a form of art peculiar to themselves; very different from that which was arrived at by Correggio and Titian. Naturally, the professors like their own form the best; and, as the old pictures are generally not so startling to the eye as the modern ones, the dukes and counts who possess them, and who like to see their galleries look new and fine (and are persuaded also that a celebrated chef-d'œuvre ought always to catch the eye at a quarter of a mile off), believe the professors who tell them their sober pictures are quite faded, and good for nothing, and should all

be brought bright again ; and, accordingly, give the sober pictures to the professors, to be put right by rules of art. Then, the professors repaint the old pictures in all the principal places, leaving perhaps only a bit of background to set off their own work. And thus the professors come to be generally figured in my mind, as the monkeys who tear holes in the pictures, to grin through. Then the picture-dealers, who live by the pictures, cannot sell them to the English in their old and pure state ; all the good work must be covered with new paint, and varnished so as to look like one of the professorial pictures in the great gallery, before it is saleable. And thus the dealers come to be imaged, in my mind, as the monkeys who make ropes of the pictures, to swing by. Then, every now and then, in some old stable, or wine-cellar, or timber-shed, behind some forgotten vats or faggots, somebody finds a fresco of Perugino's or Giotto's, but doesn't think much of it, and has no idea of having people coming into his cellar, or being obliged to move his faggots ; and so he whitewashes the fresco, and puts the faggots back again ; and these kind of persons, therefore, come generally to be

imaged in my mind, as the monkeys who taste the pictures, and spit them out, not finding them nice. While, finally, the squabbling for nuts and apples (called in Italy "bella libertà"), goes on all day long.

Now, all this might soon be put an end to, if we English, who are so fond of travelling in the body, would also travel a little in soul: We think it a great triumph to get our packages and our persons carried at a fast pace, but we never take the slightest trouble to put any pace into our perceptions; we stay usually at home in thought, or if we ever mentally see the world, it is at the old stage-coach or waggon rate. Do but consider what an odd sight it would be, if it were only quite clear to you how things are really going on—how, here in England, we are making enormous and expensive efforts to produce new art of all kinds, knowing and confessing all the while that the greater part of it is bad, but struggling still to produce new patterns of wall-papers, and new shapes of teapots, and new pictures, and statues, and architecture; and pluming and cackling if ever a teapot or a picture has the least good in it; all the while

taking no thought whatever of the best possible pictures, and statues, and wall-patterns already in existence, which require nothing but to be taken common care of, and kept from damp and dust: but we let the walls fall that Giotto patterned, and the canvasses rot that Tintoret painted, and the architecture be dashed to pieces that St. Louis built, while we are furnishing our drawing-rooms with prize upholstery, and writing accounts of our handsome warehouses to the country papers. Don't think I use my words vaguely or generally: I speak of literal facts. Giotto's frescoes at Assisi are perishing at this moment for want of decent care; Tintoret's pictures in San Sebastian, at Venice, are at this instant rotting piecemeal into gray rags; St. Louis's chapel, at Carcassonne, is at this moment lying in shattered fragments in the market-place. And here we are all cawing and crowing, poor little half-fledged daws as we are, about the pretty sticks and wool in our own nests. There's hardly a day passes, when I am at home, but I get a letter from some well-meaning country clergyman, deeply anxious about the state of his parish church, and breaking

his heart to get money together that he may hold up some wretched remnant of Tudor tracery, with one niche in the corner and no statue—when all the while the mightiest piles of religious architecture and sculpture that ever the world saw are being blasted and withered away, without one glance of pity or regret. The country clergyman does not care for *them*—he has a sea-sick imagination that cannot cross channel. What is it to him, if the angels of Assisi fade from its vaults, or the queens and kings of Chartes fall from their pedestals? They are not in his parish.

“What!” you will say, “are we not to produce any new art, nor take care of our parish churches?” No, certainly not, until you have taken proper care of the art you have got already, and of the best churches out of the parish. Your first and proper standing is not as churchwardens and parish overseers, in an English county, but as members of the great Christian community of Europe. And as members of that community (in which alone, observe, pure and precious ancient art exists, for there is none in America, none in Asia, none in Africa), you conduct yourselves precisely

as a manufacturer would, who attended to his looms, but left his warehouse without a roof. The rain floods your warehouse, the rats frolic in it, the spiders spin in it, the choughs build in it, the wall-plague frets and festers in it, and still you keep weave, weave, weaving at your wretched webs, and thinking you are growing rich, while more is gnawed out of your warehouse in an hour than you can weave in a twelvemonth.

Even this similitude is not absurd enough to set us rightly forth. The weaver would, or might, at least, hope that his new woof was as stout as the old ones, and that, therefore, in spite of rain and ravage, he would have something to wrap himself in when he needed it. But *our* webs rot as we spin. The very fact that we despise the great art of the past shows that we cannot produce great art now. If we could do it, we should love it when we saw it done—if we really cared for it, we should recognise it and keep it; but we don't care for it. It is not art that we want; it is amusement, gratification of pride, present gain—anything in the world but art: let it rot, we shall always have enough to talk about and hang over our sideboards.

You will (I hope) finally ask me what is the outcome of all this, practicable to-morrow morning by us who are sitting here? These are the main practical outcomes of it: In the first place, don't grumble when you hear of a new picture being bought by Government at a large price. There are many pictures in Europe now in danger of destruction which are, in the true sense of the word, priceless; the proper price is simply that which it is necessary to give to get and to save them. If you can get them for fifty pounds, do; if not for less than a hundred, do; if not for less than five thousand, do; if not for less than twenty thousand, do; never mind being imposed upon: there is nothing disgraceful in being imposed upon; the only disgrace is in imposing; and you can't in general get anything much worth having, in the way of Continental art, but it must be with the help or connivance of numbers of people who, indeed, ought to have nothing to do with the matter, but who practically have, and always will have, everything to do with it; and if you don't choose to submit to be cheated by them out of a ducat here and a zecchin there, you will be cheated by them out of your

picture ; and whether you are most imposed upon in losing that, or the zecchins, I think I may leave you to judge ; though I know there are many political economists, who would rather leave a bag of gold on a garret-table, than give a porter sixpence extra to carry it downstairs.

That, then, is the first practical outcome of the matter. Never grumble, but be glad when you hear of a new picture being bought at a large price. In the long run, the dearest pictures are always the best bargains ; and, I repeat (for else you might think I said it in mere hurry of talk, and not deliberately), there are some pictures which are without price. You should stand, nationally, at the edge of Dover cliffs—Shakespeare's—and wave blank cheques in the eyes of the nations on the other side of the sea, freely offered, for such and such canvasses of theirs.

Then the next practical outcome of it is : Never buy a copy of a picture, under any circumstances whatever. All copies are bad ; because no painter who is worth a straw ever *will* copy. He will make a study of a picture he likes, for his own use, in his own way ; but he won't and can't copy ; whenever you buy a copy, you buy

so much misunderstanding of the original, and encourage a dull person in following a business he is not fit for, besides increasing ultimately chances of mistake and imposture, and farthering, as directly as money *can* farther, the cause of ignorance in all directions. You may, in fact, consider yourself as having purchased a certain quantity of mistakes; and, according to your power, being engaged in disseminating them.

I do not mean, however, that copies should never be made. A certain number of dull persons should always be employed by a Government in making the most accurate copies possible of all good pictures; these copies, though artistically valueless, would be historically and documentarily valuable, in the event of the destruction of the original picture. The studies also made by great artists for their own use, should be sought after with the greatest eagerness; they are often to be bought cheap; and in connection with the mechanical copies, would become very precious: tracings from frescoes and other large works are also of great value; for though a tracing is liable to just as many mistakes as a copy, the mistakes in a tracing are of one kind only, which may be

allowed for, but the mistakes of a common copyist are of all conceivable kinds : finally, engravings, in so far as they convey certain facts about the pictures, without pretending adequately to represent or give an idea of the pictures, are often serviceable and valuable. I can't, of course, enter into details in these matters just now ; only this main piece of advice I can safely give you—never to buy copies of pictures (for your private possession) which pretend to give a *facsimile* that shall be in any wise representative of, or equal to, the original. Whenever you do so, you are only lowering your taste, and wasting your money. And if you are generous and wise, you will be ready rather to subscribe as much as you would have given for a copy of a great picture, towards its purchase, or the purchase of some other like it, by the nation. There ought to be a great National Society instituted for the purchase of pictures ; presenting them to the various galleries in our great cities, and watching there over their safety : but in the meantime, you can always act safely and beneficially by merely allowing your artist friends to buy pictures for you, when they see good ones. Never buy for

yourselves, nor go to the foreign dealers; but let any painter whom you know be entrusted, when he finds a neglected old picture in an old house, to try if he cannot get it for you; then, if you like it, keep it; if not, send it to the hammer, and you will find that you do not lose money on pictures so purchased.

And the third and chief practical outcome of the matter is this general one: Wherever you go, whatever you do, act more for *preservation* and less for *production*. I assure you, the world is, generally speaking, in calamitous disorder, and just because you have managed to thrust some of the lumber aside, and get an available corner for yourselves, you think you should do nothing but sit spinning in it all day long—while, as householders and economists, your first thought and effort should be, to set things more square all about you. Try to set the ground floors in order, and get the rottenness out of your granaries. *Then* sit and spin, but not till then.

IV. DISTRIBUTION—And now, lastly, we come to the fourth great head of our inquiry, the

question of the wise distribution of the art we have gathered and preserved. It must be evident to us, at a moment's thought, that the way in which works of art are on the whole most useful to the nation to which they belong, must be by their collection in public galleries, supposing those galleries properly managed. But there is one disadvantage attached necessarily to gallery exhibition, namely, the extent of mischief which may be done by one foolish curator. As long as the pictures which form the national wealth are disposed in private collections, the chance is always that the people who buy them will be just the people who are fond of them; and that the sense of exchangeable value in the commodity they possess, will induce them, even if they do not esteem it themselves, to take such care of it as will preserve its value undiminished. At all events, so long as works of art are scattered through the nation, no universal destruction of them is possible; a certain average only are lost by accidents from time to time. But when they are once collected in a large public gallery, if the appointment of curator becomes in any way a matter of formality,

or the post is so lucrative as to be disputed by place-hunters, let but one foolish or careless person get possession of it, and perhaps you may have all your fine pictures re-painted, and the national property destroyed, in a month. That is actually the case at this moment, in several great foreign galleries. They are the places of execution of pictures: over their doors you only want the Dantesque inscription — “*Lasciate ogni speranza, voi che entrate.*”

Supposing, however, this danger properly guarded against, as it would be always by a nation which either knew the value, or understood the meaning, of painting,* arrangement in a public gallery is the safest, as well as the most serviceable, method of exhibiting pictures; and it is the only mode in which their historical value can be brought out, and their historical meaning made clear. But great good is also to be done by encouraging the private possession of pictures; partly as a means of study (much more being

* It would be a great point gained towards the preservation of pictures if it were made a rule that at every operation they underwent, the exact spots in which they have been re-painted should be recorded in writing.

always discovered in any work of art by a person who has it perpetually near him than by one who only sees it from time to time) and also as a means of refining the habits and touching the hearts of the masses of the nation in their domestic life.

For these last purposes the most serviceable art is the living art of the time ; the particular tastes of the people will be best met, and their particular ignorances best corrected, by painters labouring in the midst of them, more or less guided to the knowledge of what is wanted by the degree of sympathy with which their work is received. So then, generally, it should be the object of government, and of all patrons of art, to collect, as far as may be, the works of dead masters in public galleries, arranging them so as to illustrate the history of nations, and the progress and influence of their arts ; and to encourage the private possession of the works of *living* masters. And the first and best way in which to encourage such private possession is, of course, to keep down the prices of them as far as you can.

I hope there are not a great many painters in the room ; if there are, I entreat their patience for

the next quarter of an hour: if they will bear with me for so long, I hope they will not, finally, be offended by what I am going to say.

I repeat, trusting to their indulgence in the interim, that the first object of our national economy, as respects the distribution of modern art, should be steadily and rationally to limit its prices, since by doing so, you will produce two effects; you will make the painters produce more pictures, two or three instead of one, if they wish to make money; and you will, by bringing good pictures within the reach of people of moderate income, excite the general interest of the nation in them, increase a thousandfold the demand for the commodity, and therefore its wholesome and natural production.

I know how many objections must arise in your minds at this moment to what I say; but you must be aware that it is not possible for me in an hour to explain all the moral and commercial bearings of such a principle as this. Only, believe me, I do not speak lightly; I think I have considered all the objections which could be rationally brought forward, though I have time at present only to glance at the main one, namely, the idea

that the high prices paid for modern pictures are either honourable, or serviceable, to the painter. So far from this being so, I believe one of the principal obstacles to the progress of modern art to be the high prices given for good modern pictures. For observe first the action of this high remuneration on the artist's mind. If he "gets on," as it is called, catches the eye of the public, and especially of the public of the upper classes, there is hardly any limit to the fortune he may acquire; so that, in his early years, his mind is naturally led to dwell on this worldly and wealthy eminence as the main thing to be reached by his art; if he finds that he is not gradually rising towards it, he thinks there is something wrong in his work; or, if he is too proud to think that, still the bribe of wealth and honour warps him from his honest labour into efforts to attract attention; and he gradually loses both his power of mind and his rectitude of purpose. This, according to the degree of avarice or ambition which exists in any painter's mind, is the necessary influence upon him of the hope of great wealth and reputation. But the harm is still greater, in so far as the possibility of attaining fortune of this

kind tempts people continually to become painters who have no real gift for the work ; and on whom these motives of mere worldly interest have exclusive influence ; men who torment and abuse the patient workers, eclipse or thrust aside all delicate and good pictures by their own gaudy and coarse ones, corrupt the taste of the public, and do the greatest amount of mischief to the schools of art in their day which it is possible for their capacities to effect ; and it is quite wonderful how much mischief may be done even by small capacity. If you could by any means succeed in keeping the prices of pictures down, you would throw all these disturbers out of the way at once.

You may perhaps think that this severe treatment would do more harm than good, by withdrawing the wholesome element of emulation, and giving no stimulus to exertion ; but I am sorry to say that artists will always be sufficiently jealous of one another, whether you pay them large or low prices ; and as for stimulus to exertion, believe me, no good work in this world was ever done for money, nor while the slightest thought of money affected the painter's mind. Whatever idea of pecuniary value enters into his thoughts as he

works, will, in proportion to the distinctness of its presence, shorten his power. A real painter will work for you exquisitely, if you give him, as I told you a little while ago, bread and water and salt; and a bad painter will work badly and hastily, though you give him a palace to live in, and a principedom to live upon. Turner got, in his earlier years, half-a-crown a day and his supper (not bad pay, neither); and he learned to paint upon that. And I believe that there is no chance of art's truly flourishing in any country, until you make it a simple and plain business, providing its masters with an easy competence, but rarely with anything more. And I say this, not because I despise the great painter, but because I honour him; and I should no more think of adding to his respectability or happiness by giving him riches, than, if Shakespeare or Milton were alive, I should think we added to *their* respectability, or were likely to get better work from them, by making them millionaires.

But, observe, it is not only the painter himself whom you injure, by giving him too high prices; you injure all the inferior painters of the day. If they are modest, they will be discouraged and

depressed by the feeling that their doings are worth so little, comparatively, in your eyes ; if proud, all their worst passions will be aroused, and the insult or opprobrium which they will try to cast on their successful rival will not only afflict and wound him, but at last sour and harden him : he cannot pass through such a trial without grievous harm.

That, then, is the effect you produce on the painter of mark, and on the inferior ones of his own standing. But you do worse than this ; you deprive yourselves, by what you give for the fashionable picture, of the power of helping the younger men who are coming forward. Be it admitted, for argument's sake, if you are not convinced by what I have said, that you do no harm to the great man by paying him well ; yet certainly you do him no special good. His reputation is established, and his fortune made ; he does not care whether you buy or not : he thinks he is rather doing you a favour than otherwise by letting you have one of his pictures at all. All the good you do him is to help him to buy a new pair of carriage horses ; whereas, with that same sum which thus you cast away, you might

have relieved the hearts and preserved the health of twenty young painters ; and if among those twenty, you but chanced on one in whom a true latent power had been hindered by his poverty, just consider what a far-branching, far-embracing good you have wrought with that lucky expenditure of yours. I say "Consider it" in vain ; you cannot consider it, for you cannot conceive the sickness of heart with which a young painter of deep feeling toils through his first obscurity—his sense of the strong voice within him, which you will not hear—his vain, fond, wondering witness to the things you will not see ; his far-away perception of things that he could accomplish if he had but peace, and time, all unapproachable and vanishing from him, because no one will leave him peace or grant him time : all his friends falling back from him ; those whom he would most reverently obey rebuking and paralysing him ; and last and worst of all, those who believe in him the most faithfully suffering by him the most bitterly—the wife's eyes, in their sweet ambition, shining brighter as the cheek wastes away ; and the little lips at his side parched and pale, which one day, he knows,

though he may never see it, will quiver so proudly when they name his name, calling him "our father." You deprive yourselves, by your large expenditure for pictures of mark, of the power of relieving and redeeming *this* distress ; you injure the painter whom you pay so largely ; and what, after all, have you done for yourselves, or got for yourselves? It does not in the least follow that the hurried work of a fashionable painter will contain more for your money than the quiet work of some unknown man. In all probability, you will find, if you rashly purchase what is popular at a high price, that you have got one picture you don't care for, for a sum which would have bought twenty you would have delighted in. For remember always that the price of a picture by a living artist, never represents, never *can* represent, the quantity of labour or value in it. Its price represents, for the most part, the degree of desire which the rich people of the country have to possess it. Once get the wealthy classes to imagine that the possession of pictures by a given artist adds to their "gentility," and there is no price which his work may not immediately reach, and for years maintain ; and

in buying at that price, you are not getting value for your money, but merely disputing for victory in a contest of ostentation. And it is hardly possible to spend your money in a worse or more wasteful way ; for though you may not be doing it for ostentation yourself, you are, by your pertinacity, nourishing the ostentation of others ; you meet them in their game of wealth, and continue it for them ; if they had not found an opposite player, the game would have been done ; for a proud man can find no enjoyment in possessing himself of what nobody disputes with him. So that by every farthing you give for a picture beyond its fair price—that is to say, the price which will pay the painter for his time—you are not only cheating yourself and buying vanity, but you are stimulating the vanity of others ; paying, literally, for the cultivation of pride. You may consider every pound that you spend above the just price of a work of art, as an investment in a cargo of mental quicklime or guano, which, being laid on the fields of human nature, is to grow a harvest of pride. You are in fact ploughing and harrowing, in a most valuable part of your land, in order to reap the whirlwind ;

you are setting your hand stoutly to Job's agriculture, "Let thistles grow instead of wheat, and cockle instead of barley."

Well, but you will say, there is one advantage in high prices, which more than counterbalances all this mischief, namely, that by great reward we both urge and enable a painter to produce rather one perfect picture than many inferior ones : and one perfect picture (so you tell us, and we believe it) is worth a great number of inferior ones.

It is so ; but you cannot get it by paying for it. A great work is only done when the painter gets into the humour for it, likes his subject, and determines to paint it as well as he can, whether he is paid for it or not ; but bad work, and generally the worst sort of bad work, is done when he is trying to produce a showy picture, or one that shall appear to have as much labour in it as shall be worth a high price.*

* When this lecture was delivered, I gave here some data for approximate estimates of the average value of good modern pictures of different classes, but the subject is too complicated to be adequately treated in writing, without introducing more detail than the reader will have patience for. But I may state, roughly, that prices above a hundred guineas are in general extravagant for water-colours, and about five hundred for oils.

There is, however, another point, and a still more important one, bearing on this matter of purchase, than the keeping down of prices to a rational standard. And that is, that you pay your prices into the hands of living men, and do not pour them into coffins.

For observe that, as we arrange our payment of pictures at present, no artist's work is worth half its proper value while he is alive. The moment he dies, his pictures, if they are good, reach double their former value; but, that rise of price represents simply a profit made by the intelligent dealer or purchaser on his past purchases. So that the real facts of the matter are, that the British public, spending a certain sum annually in art, determines that, of every

An artist almost always does wrong who puts more work than these prices will remunerate him for into any single canvas—his talent would be better employed in painting two pictures than one so elaborate. The water-colour painters also are getting into the habit of making their drawings too large, and in a measure attaching their price rather to breadth and extent of touch than to thoughtful labour. Of course marked exceptions occur here and there, as in the case of John Lewis, whose drawings are wrought with unfailing precision throughout, whatever their scale. Hardly any price can be remunerative for such work.

thousand it pays, only five hundred shall go to the painter, or shall be at all concerned in the production of art ; and that the other five hundred shall be paid merely as a testimonial to the intelligent dealer, who knew what to buy. Now, testimonials are very pretty and proper things, within due limits ; but testimonial to the amount of a hundred per cent. on the total expenditure is not good political economy. Do not therefore, in general, unless you see it to be necessary for its preservation, buy the picture of a dead artist. If you fear that it may be exposed to contempt or neglect, buy it ; its price will then, probably, not be high : if you want to put it into a public gallery, buy it ; you are sure, then, that you do not spend your money selfishly : or, if you loved the man's work while he was alive, and bought it then, buy it also now, if you can see no living work equal to it. But if you did not buy it while the man was living, never buy it after he is dead : you are then doing no good to him, and you are doing some shame to yourself. Look around you for pictures that you really like, and in buying which you can help some genius yet unperished—that is the best atonement you can make to

the one you have neglected—and give to the living and struggling painter at once wages, and testimonial.

So far then of the motives which should induce us to keep down the prices of modern art, and thus render it, as a private possession, attainable by greater numbers of people than at present. But we should strive to render it accessible to them in other ways also—chiefly by the permanent decoration of public buildings; and it is in this field that I think we may look for the profitable means of providing that constant employment for young painters of which we were speaking last evening.

The first and most important kind of public buildings which we are always sure to want, are schools: and I would ask you to consider very carefully, whether we may not wisely introduce some great changes in the way of school decoration. Hitherto, as far as I know, it has either been so difficult to give all the education we wanted to our lads, that we have been obliged to do it, if at all, with cheap furniture in bare walls; or else we have considered that cheap furniture and bare walls are a proper part of the means of

education ; and supposed that boys learned best when they sat on hard forms, and had nothing but blank plaster about and above them whereupon to employ their spare attention ; also, that it was as well they should be accustomed to rough and ugly conditions of things, partly by way of preparing them for the hardships of life, and partly that there might be the least possible damage done to floors and forms, in the event of their becoming, during the master's absence, the fields or instruments of battle. All this is so far well and necessary, as it relates to the training of country lads, and the first training of boys in general. But there certainly comes a period in the life of a well educated youth, in which one of the principal elements of his education is, or ought to be, to give him refinement of habits ; and not only to teach him the strong exercises of which his frame is capable, but also to increase his bodily sensibility and refinement, and show him such small matters as the way of handling things properly, and treating them considerately. Not only so, but I believe the notion of fixing the attention by keeping the room empty, is a wholly mistaken one : I think it is just in the emptiest

room that the mind wanders most; for it gets restless, like a bird, for want of a perch, and casts about for any possible means of getting out and away. And even if it be fixed, by an effort, on the business in hand, that business becomes itself repulsive, more than it need be, by the vileness of its associations; and many a study appears dull or painful to a boy, when it is pursued on a blotted deal desk, under a wall with nothing on it but scratches and pegs, which would have been pursued pleasantly enough in a curtained corner of his father's library, or at the lattice window of his cottage. Nay, my own belief is, that the best study of all is the most beautiful; and that a quiet glade of forest, or the nook of a lake shore, are worth all the school-rooms in Christendom, when once you are past the multiplication table; but be that as it may, there is no question at all but that a time ought to come in the life of a well trained youth, when he can sit at a writing-table without wanting to throw the inkstand at his neighbour; and when also he will feel more capable of certain efforts of mind with beautiful and refined forms about him than with ugly ones. When that time comes, he

ought to be advanced into the decorated schools ; and this advance ought to be one of the important and honourable epochs of his life.

I have not time, however, to insist on the mere serviceableness to our youth of refined architectural decoration, as such ; for I want you to consider the probable influence of the particular kind of decoration which I wish you to get for them, namely, historical painting. You know we have hitherto been in the habit of conveying all our historical knowledge, such as it is, by the ear only, never by the eye ; all our notions of things being ostensibly derived from verbal description, not from sight. Now, I have no doubt that, as we grow gradually wiser—and we are doing so every day—we shall discover at last that the eye is a nobler organ than the ear ; and that through the eye we must, in reality, obtain, or put into form, nearly all the useful information we are to have about this world. Even as the matter stands, you will find that the knowledge which a boy is supposed to receive from verbal description is only available to him so far as in any underhand way he gets a sight of the thing you are talking

about. I remember well that, for many years of my life, the only notion I had of the look of a Greek knight was complicated between recollection of a small engraving in my pocket Pope's Homer, and reverent study of the Horse-Guards. And though I believe that most boys collect their ideas from more varied sources, and arrange them more carefully than I did; still, whatever sources they seek must always be ocular: if they are clever boys, they will go and look at the Greek vases and sculptures in the British Museum, and at the weapons in our armouries—they will see what real armour is like in lustre, and what Greek armour was like in form, and so put a fairly true image together, but still not, in ordinary cases, a very living or interesting one. Now, the use of your decorative painting would be, in myriads of ways, to animate their history for them, and to put the living aspect of past things before their eyes as faithfully as intelligent invention can; so that the master shall have nothing to do but once to point to the schoolroom walls, and for ever afterwards the meaning of any word would be fixed in a boy's mind in the best

possible way. Is it a question of classical dress—what a tunic was like, or a chlamys, or a peplus? At this day, you have to point to some vile woodcut, in the middle of a dictionary page, representing the thing hung upon a stick; but then, you would point to a hundred figures, wearing the actual dress, in its fiery colours, in all actions of various stateliness or strength; you would understand at once how it fell round the people's limbs as they stood, how it drifted from their shoulders as they went, how it veiled their faces as they wept, how it covered their heads in the day of battle. *Now*, if you want to see what a weapon is like, you refer, in like manner, to a numbered page, in which there are spear-heads in rows, and sword-hilts in symmetrical groups; and gradually the boy gets a dim mathematical notion how one scymitar is hooked to the right and another to the left, and one javelin has a knob to it and another none: while one glance at your good picture would show him—and the first rainy afternoon in the schoolroom would for ever fix in his mind—the look of the sword and spear as they fell or flew; and how they pierced, or bent, or

shattered—how men wielded them, and how men died by them. But far more than all this, is it a question not of clothes or weapons, but of men? how can we sufficiently estimate the effect on the mind of a noble youth, at the time when the world opens to him, of having faithful and touching representations put before him of the acts and presences of great men—how many a resolution, which would alter and exalt the whole course of his after-life, might be formed, when in some dreamy twilight he met, through his own tears, the fixed eyes of those shadows of the great dead, unescapable and calm, piercing to his soul; or fancied that their lips moved in dread reproof or soundless exhortation. And if but for one out of many this were true—if yet, in a few, you could be sure that such influence had indeed changed their thoughts and destinies, and turned the eager and reckless youth, who would have cast away his energies on the race-horse or the gambling-table, to that noble life-race, that holy life-hazard, which should win all glory to himself and all good to his country.—would not that, to some purpose, be “political economy of art?”

And observe, there could be no monotony, no exhaustibleness, in the scenes required to be thus portrayed. Even if there were, and you wanted for every school in the kingdom, one death of Leonidas; one battle of Marathon; one death of Cleobis and Bito; there need not therefore be more monotony in your art than there was in the repetition of a given cycle of subjects by the religious painters of Italy. But we ought not to admit a cycle at all. For, though we had as many great schools as we have great cities (one day I hope we *shall* have), centuries of painting would not exhaust, in all the number of them, the noble and pathetic subjects which might be chosen from the history of even one noble nation. But, beside this, you will not, in a little while, limit your youths' studies to so narrow fields as you do now. There will come a time—I am sure of it—when it will be found that the same practical results, both in mental discipline and in political philosophy, are to be attained by the accurate study of mediæval and modern as of ancient history; and that the facts of mediæval and modern history are, on the whole, the most important to us.

And among these noble groups of constellated schools which I foresee arising in our England, I foresee also that there will be divided fields of thought; and that while each will give its scholars a great general idea of the world's history, such as all men should possess—each will also take upon itself, as its own special duty, the closer study of the course of events in some given place or time. It will review the rest of history, but it will exhaust its own special field of it; and found its moral and political teaching on the most perfect possible analysis of the results of human conduct in one place, and at one epoch. And then, the galleries of that school will be painted with the historical scenes belonging to the age which it has chosen for its special study.

So far, then, of art as you may apply it to that great series of public buildings which you devote to the education of youth. The next large class of public buildings in which we should introduce it, is one which I think a few years more of national progress will render more serviceable to us than they have been lately. I mean, buildings for the meetings of guilds of trades.

And here, for the last time, I must again interrupt the course of our chief inquiry, in order to state one other principle of political economy, which is perfectly simple and indisputable; but which, nevertheless, we continually get into commercial embarrassments for want of understanding; and not only so, but suffer much hindrance in our commercial discoveries, because many of our business men do not practically admit it.

Supposing half a dozen or a dozen men were cast ashore from a wreck on an uninhabited island, and left to their own resources, one of course, according to his capacity, would be set to one business and one to another; the strongest to dig and to cut wood, and to build huts for the rest; the most dexterous to make shoes out of bark and coats out of skins; the best educated to look for iron or lead in the rocks, and to plan the channels for the irrigation of the fields. But though their labours were thus naturally severed, that small group of shipwrecked men would understand well enough that the speediest progress was to be made by helping each other — not by opposing each other: and they

would know that this help could only be properly given so long as they were frank and open in their relations, and the difficulties which each lay under properly explained to the rest. So that any appearance of secrecy or separateness in the actions of any of them would instantly, and justly, be looked upon with suspicion by the rest, as the sign of some selfish or foolish proceeding on the part of the individual. If, for instance, the scientific man were found to have gone out at night, unknown to the rest, to alter the sluices, the others would think, and in all probability rightly think, that he wanted to get the best supply of water to his own field; and if the shoemaker refused to show them where the bark grew which he made the sandals of, they would naturally think, and in all probability rightly think, that he didn't want them to see how much there was of it, and that he meant to ask from them more corn and potatoes in exchange for his sandals than the trouble of making them deserved. And thus, although each man would have a portion of time to himself in which he was allowed to do what he chose without let or inquiry—so long as he was working

in that particular business which he had undertaken for the common benefit, any secrecy on his part would be immediately supposed to mean mischief; and would require to be accounted for, or put an end to: and this all the more because, whatever the work might be, certainly there would be difficulties about it which, when once they were well explained, might be more or less done away with by the help of the rest; so that assuredly every one of them would advance with his labour not only more happily, but more profitably and quickly, by having no secrets, and by frankly bestowing, and frankly receiving, such help as lay in his way to get or to give.

And, just as the best and richest result of wealth and happiness to the whole of them, would follow on their perseverance in such a system of frank communication and of helpful labour; so precisely the worst and poorest result would be obtained by a system of secrecy and of enmity; and each man's happiness and wealth would assuredly be diminished in proportion to the degree in which jealousy and concealment became their social and economical principles. It would not, in the long run, bring

good, but only evil, to the man of science, if, instead of telling openly where he had found good iron, he carefully concealed every new bed of it, that he might ask, in exchange for the rare ploughshare, more corn from the farmer, or in exchange for the rude needle, more labour from the sempstress : and it would not ultimately bring good, but only evil, to the farmers, if they sought to burn each other's cornstacks, that they might raise the value of their grain, or if the sempstresses tried to break each other's needles, that each might get all the stitching to herself.

Now, these laws of human action are precisely as authoritative in their application to the conduct of a million of men, as to that of six or twelve. All enmity, jealousy, opposition, and secrecy are wholly, and in all circumstances, destructive in their nature—not productive ; and all kindness, fellowship, and communicativeness are invariably productive in their operation—not destructive ; and the evil principles of opposition and exclusiveness are not rendered less fatal, but more fatal, by their acceptance among large masses of men ; more fatal, I say, exactly in proportion as

their influence is more secret. For though the opposition does always its own simple, necessary, direct quantity of harm, and withdraws always its own simple, necessary, measurable quantity of wealth from the sum possessed by the community, yet, in proportion to the size of the community, it does another and more refined mischief than this, by concealing its own fatality under aspects of mercantile complication and expediency, and giving rise to multitudes of false theories based on a mean belief in narrow and immediate appearances of good done here and there by things which have the universal and everlasting nature of evil. So that the time and powers of the nation are wasted, not only in wretched struggling against each other, but in vain complaints, and groundless discouragements, and empty investigations, and useless experiments in laws, and elections, and inventions; with hope always to pull wisdom through some new-shaped slit in a ballot-box, and to drag prosperity down out of the clouds along some new knot of electric wire; while all the while Wisdom stands calling at the corners of the streets, and the blessing of Heaven waits

ready to rain down upon us, deeper than the rivers and broader than the dew, if only we will obey the first plain principles of humanity, and the first plain precepts of the skies; "Execute true judgment, and show mercy and compassion, every man to his brother; and let none of you imagine evil against his brother in your heart." *

* It would be well if, instead of preaching continually about the doctrine of faith and good works, our clergymen would simply explain to their people a little what good works mean. There is not a chapter in all the book we profess to believe, more specially and directly written for England than the second of Habakkuk, and I never in all my life heard one of its practical texts preached from. I suppose the clergymen are all afraid, and know that their flocks, while they will sit quite politely to hear syllogisms out of the epistle to the Romans, would get restive directly if they ever pressed a practical text home to them. But we should have no mercantile catastrophes, and no distressful pauperism, if we only read often, and took to heart, those plain words: "Yea, also, because he is a proud man, neither keepeth at home, who enlargeth his desire as hell, and cannot be satisfied—Shall not all these take up a parable against him, and a taunting proverb against him, and say 'Woe to him that increaseth that which is not his; and to him that *ladeth himself with thick clay.*'" (What a glorious history in one metaphor, of the life of a man greedy of fortune.) "Woe to him that coveteth an evil covetousness that he may set his nest on high. Woe to him ~~that~~ buildeth a town with blood, and stablisheth a city by

Therefore, I believe most firmly, that as the laws of national prosperity get familiar to us, we shall more and more cast our toil into social and communicative systems; and that one of the first means of our doing so, will be the re-establishing guilds of every important trade in a vital, not formal, condition; that there will be a great council or government house for the members of every trade, built in whatever town of the kingdom occupies itself principally in such trade, with minor council-halls in other cities; and to each council-hall, officers attached, whose first business may be to examine into the circumstances of every operative, in that trade, who chooses to report himself to them when out of work, and to set him to work, if he is indeed able and willing, at a fixed rate of wages, determined at regular periods in the council-meetings; and whose next duty may be to bring reports before the council of all improvements made in the

iniquity. Behold, is it not of the Lord of Hosts that the people shall labour in the very fire, and the people shall weary themselves for very vanity?"

The Americans, who have been sending out ships with sham bolt-heads on their timbers, and only half their bolts, may meditate on that "buildeth a town with blood."

business, and means of its extension : not allowing private patents of any kind, but making all improvements available to every member of the guild, only allotting, after successful trial of them, a certain reward to the inventors.

For these, and many other such purposes, such halls will be again, I trust, fully established, and then, in the paintings and decorations of them, especial effort ought to be made to express the worthiness and honourableness of the trade for whose members they are founded. For I believe one of the worst symptoms of modern society to be, its notion of great inferiority, and ungentlemanliness, as necessarily belonging to the character of a tradesman. I believe tradesmen may be, ought to be—often are, more gentlemen than idle and useless people: and I believe that art may do noble work by recording in the hall of each trade, the services which men belonging to that trade have done for their country, both preserving the portraits, and recording the important incidents in the lives, of those who have made great advances in commerce and civilisation. I cannot follow out this subject, it branches too far, and in too many directions ;

besides, I have no doubt you will at once see and accept the truth of the main principle, and be able to think it out for yourselves. I would fain also have said something of what might be done, in the same manner, for almshouses and hospitals, and for what, as I shall try to explain in notes to this lecture, we may hope to see, some day, established with a different meaning in their name than that they now bear—workhouses; but I have detained you too long already, and cannot permit myself to trespass further on your patience except only to recapitulate, in closing, the simple principles respecting wealth which we have gathered during the course of our inquiry; principles which are nothing more than the literal and practical acceptance of the saying, which is in all good men's mouths; namely, that they are stewards or ministers of whatever talents are entrusted to them. Only, is it not a strange thing, that while we more or less accept the meaning of that saying, so long as it is considered metaphorical, we never accept its meaning in its own terms? You know the lesson is given us under the form of a story about money. Money was given to the servants to

make use of : the unprofitable servant dug in the earth, and hid his Lord's money. Well, we, in our poetical and spiritual application of this, say, that of course money doesn't mean money, it means wit, it means intellect, it means influence in high quarters, it means everything in the world except itself. And do not you see what a pretty and pleasant come-off there is for most of us, in this spiritual application? Of course, if we had wit, we would use it for the good of our fellow-creatures. But we haven't wit. Of course, if we had influence with the bishops, we would use it for the good of the Church ; but we haven't any influence with the bishops. Of course, if we had political power, we would use it for the good of the nation ; but we have no political power ; we have no talents entrusted to *us* of any sort or kind. It is true we have a little money, but the parable can't possibly mean anything so vulgar as money ; our money's our own.

I believe, if you think seriously of this matter, you will feel that the first and most literal application is just as necessary a one as any other—that the story does very specially mean what it says—plain money ; and that the reason

we don't at once believe it does so, is a sort of tacit idea that while thought, wit, and intellect, and all power of birth and position, are indeed *given* to us, and, therefore, to be laid out for the Giver—our wealth has not been given to us; but we have worked for it, and have a right to spend it as we choose. I think you will find that is the real substance of our understanding in this matter. Beauty, we say, is given by God—it is a talent; strength is given by God—it is a talent; position is given by God—it is a talent; but money is proper wages for our day's work—it is not a talent, it is a due. We may justly spend it on ourselves, if we have worked for it.

And there would be some shadow of excuse for this, were it not that the very power of making the money is itself only one of the applications of that intellect or strength which we confess to be talents. Why is one man richer than another? Because he is more industrious, more persevering, and more sagacious. Well, who made him more persevering or more sagacious than others? That power of endurance, that quickness of apprehension, that calmness of

judgment, which enable him to seize the opportunities that others lose, and persist in the lines of conduct in which others fail—are these not talents?—are they not, in the present state of the world, among the most distinguished and influential of mental gifts? And is it not wonderful, that while we should be utterly ashamed to use a superiority of body, in order to thrust our weaker companions aside from some place of advantage, we unhesitatingly use our superiorities of mind to thrust them back from whatever good that strength of mind can attain. You would be indignant if you saw a strong man walk into a theatre or a lecture-room, and, calmly choosing the best place, take his feeble neighbour by the shoulder, and turn him out of it into the back seats, or the street. You would be equally indignant if you saw a stout fellow thrust himself up to a table where some hungry children were being fed, and reach his arm over their heads and take their bread from them. But you are not the least indignant if, when a man has stoutness of thought and swiftness of capacity, and, instead of being long-armed only, has the much greater gift of

being long-headed—you think it perfectly just that he should use his intellect to take the bread out of the mouths of all the other men in the town who are of the same trade with him ; or use his breadth and sweep of sight to gather some branch of the commerce of the country into one great cobweb, of which he is himself to be the central spider, making every thread vibrate with the points of his claws, and commanding every avenue with the facets of his eyes. You see no injustice in this.

But there is injustice ; and, let us trust, one of which honourable men will at no very distant period disdain to be guilty. In some degree, however, it is indeed not unjust ; in some degree it is necessary and intended. It is assuredly just that idleness should be surpassed by energy ; that the widest influence should be possessed by those who are best able to wield it ; and that a wise man, at the end of his career, should be better off than a fool. But for that reason, is the fool to be wretched, utterly crushed down, and left in all the suffering which his conduct and capacity naturally inflict?—Not so. What do you suppose fools were made for? That you

might tread upon them, and starve them, and get the better of them in every possible way? By no means. They were made that wise people might take care of them. That is the true and plain fact concerning the relations of every strong and wise man to the world about him. He has his strength given him, not that he may crush the weak, but that he may support and guide them. In his own household he is to be the guide and the support of his children; out of his household he is still to be the father, that is, the guide and support of the weak and the poor; not merely of the meritoriously weak and the innocently poor, but of the guiltily and punishably poor; of the men who ought to have known better—of the poor who ought to be ashamed of themselves. It is nothing to give pension and cottage to the widow who has lost her son; it is nothing to give food and medicine to the workman who has broken his arm, or the decrepit woman wasting in sickness. But it is something to use your time and strength to war with the waywardness and thoughtlessness of mankind; to keep the erring workman in your service till you have made him an unerring one;

and to direct your fellow-merchant to the opportunity which his dulness would have lost. This is much ; but it is yet more, when you have fully achieved the superiority which is due to you, and acquired the wealth which is the fitting reward of your sagacity, if you solemnly accept the responsibility of it, as it is the helm and guide of labour far and near. For you who have it in your hands, are in reality the pilots of the power and effort of the State.* It is entrusted to you as an authority to be used for good or evil, just as completely as kingly authority was ever given to a prince, or military command to a captain. And, according to the quantity of it that you have in your hands, you are the arbiters of the will and work of England ; and the whole issue, whether the work of the State shall suffice for the State or not, depends upon you. You may stretch out your sceptre over the heads of the English labourers, and say to them, as they stoop to its waving : "Subdue this obstacle that has baffled our fathers, put away this plague that consumes our children ; water these dry places, plough

* See note 7th in *Addenda*.

these desert ones, carry this food to those who are in hunger ; carry this light to those who are in darkness ; carry this life to those who are in death ;” or on the other side you may say to her labourers : “ Here am I ; this power is in my hand ; come, build a mound here for me to be throned upon, high and wide ; come, make crowns for my head, that men may see them shine from far away ; come, weave tapestries for my feet, that I may tread softly on the silk and purple,* come, dance before me, that I may be gay ; and sing sweetly to me, that I may slumber ; so shall I live in joy, and die in honour.” And better than such an honourable death, it were that the day had perished wherein we were born, and the night in which it was said there is a child conceived.

I trust, that in a little while, there will be few of our rich men who, through carelessness or covetousness, thus forfeit the glorious office which is intended for their hands. I said, just now, that wealth ill used was as the net of the spider, entangling and destroying : but wealth well used is as the net of the sacred fisher who gathers

* See note 8th in *Addenda*.

souls of men out of the deep. A time will come—I do not think even now it is far from us—when this golden net of the world's wealth will be spread abroad as the flaming meshes of morning cloud are over the sky; bearing with them the joy of light and the dew of the morning, as well as the summons to honourable and peaceful toil. What less can we hope from your wealth than this, rich men of England, when once you feel fully how, by the strength of your possessions—not, observe, by the exhaustion, but by the administration of them and the power—you can direct the acts—command the energies—inform the ignorance—prolong the existence, of the whole human race; and how, even of worldly wisdom, which man employs faithfully, it is true, not only that her ways are pleasantness, but that her paths are peace; and that, for all the children of men, as well as for those to whom she is given, Length of days are in her right hand, as in her left hand Riches and Honour?

NOTE 1st, p. 26: "*Fatherly Authority.*"

THIS statement could not, of course, be heard without displeasure by a certain class of politicians; and in one of the notices of these lectures given in the Manchester journals at the time, endeavour was made to get quit of it by referring to the Divine authority, as the only Paternal power with respect to which men were truly styled "brethren." Of course it is so, and, equally of course, all human government is nothing else than the executive expression of this Divine authority. The moment government ceases to be the practical enforcement of Divine law, it is tyranny; and the meaning which I attach to the words, "paternal government," is, in more extended terms, simply this: "The executive fulfilment, by formal human methods, of the will of the Father of mankind respecting His children." I could not give such a definition of Government as this in a popular lecture; and even in written form, it will necessarily suggest many objections, of which I must notice and answer the most probable.

Only, in order to avoid the recurrence of such tiresome phrases as "it may be answered in the second place," and "it will be objected in the third place," etc., I will ask the reader's leave to arrange the discussion in the form of simple dialogue, letting *O.* stand for objector, and *R.* for response.

O.: You define your paternal government to be the executive fulfilment, by formal human methods, of the Divine will. But, assuredly, that will cannot stand in need of aid or expression from human laws. It cannot fail of its fulfilment.

R.: In the final sense it cannot; and in that sense, men who are committing murder and stealing are fulfilling the will of God as much as the best and kindest people in the world. But in the limited and present sense, the only sense with which *we* have anything to do, God's will concerning man is fulfilled by some men, and thwarted by others. And those men who either persuade or enforce the doing of it, stand towards those who are rebellious against it exactly in the position of faithful children in a family, who, when the father is out of sight, either compel or persuade the rest to do as their father would

have them, were he present; and in so far as they are expressing and maintaining, for the time, the paternal authority, they exercise, in the exact sense in which I mean the phrase to be understood, paternal government over the rest.

O.: But, if Providence has left a liberty to man in many things in order to prove him, why should human law abridge that liberty, and take upon itself to compel what the great Lawgiver does not compel?

R.: It is confessed, in the enactment of any law whatsoever, that human lawgivers have a right to do this. For, if you have no right to abridge any of the liberty which Providence has left to man, you have no right to punish any one for committing murder or robbery. You ought to leave them to the punishment of God and Nature. But if you think yourself under obligation to punish, as far as human laws can, the violation of the will of God by these great sins, you are certainly under the same obligation to punish, with proportionately less punishment, the violation of His will in less sins.

O.: No; you must not attempt to punish

less sins by law, because you cannot properly define nor ascertain them. Everybody can determine whether murder has been committed or not, but you cannot determine how far people have been unjust or cruel in minor matters, and therefore cannot make or execute laws concerning minor matters.

R.: If I propose to you to punish faults which cannot be defined, or to execute laws which cannot be made equitable, reject the laws I propose. But do not generally object to the principle of law.

O.: Yes; I generally object to the principle of law as applied to minor things; because, if you could succeed (which you cannot) in regulating the entire conduct of men by law in little things as well as great, you would take away from human life all its probationary character, and render many virtues and pleasures impossible. You would reduce virtue to the movement of a machine, instead of the act of a spirit.

R.: You have just said, parenthetically, and I fully and willingly admit it, that it is impossible to regulate all minor matters by law. Is

it not probable, therefore, that the degree in which it is *possible* to regulate them by it, is also the degree in which it is *right* to regulate them by it? Or what other means of judgment will you employ, to separate the things which ought to be formally regulated from the things which ought not. You admit that great sins should be legally repressed; but you say that small sins should not be legally repressed. How do you distinguish between great and small sins; and how do you intend to determine, or do you in practice of daily life determine, on what occasions you should compel people to do right, and on what occasions you should leave them the option of doing wrong?

O.: I think you cannot make any accurate or logical distinction in such matters; but that common sense and instinct have, in all civilised nations, indicated certain crimes of great social harmfulness, such as murder, theft, adultery, slander, and such like, which it is proper to repress legally; and that common sense and instinct indicate also the kind of crimes which it is proper for laws to let alone, such as

miserliness, ill-natured speaking, and many of those commercial dishonesties which I have a notion you want your paternal government to interfere with.

R.: Pray do not alarm yourself about what my paternal government is likely to interfere with, but keep to the matter in hand. You say that "common sense and instinct" have, in all civilised nations, distinguished between the sins that ought to be legally dealt with and that ought not. Do you mean that the laws of all civilised nations are perfect?

O.: No; certainly not.

R.: Or that they are perfect at least in their discrimination of what crimes they should deal with, and what crimes they should let alone?

O.: No; not exactly.

R.: What *do* you mean, then?

O.: I mean that the general tendency is right in the laws of civilised nations; and that, in due course of time, natural sense and instinct point out the matters they should be brought to bear upon. And each question of legislation must be made a separate subject of inquiry as it presents itself: you cannot fix any

general principles about what should be dealt with legally, and what should not.

R.: Supposing it to be so, do you think there are any points in which our English legislation is capable of amendment, as it bears on commercial and economical matters in this present time?

O.: Of course I do.

R.: Well, then, let us discuss these together quietly; and if the points that I want amended seem to you incapable of amendment, or not in need of amendment, say so: but don't object, at starting, to the mere proposition of applying law to things which have not had law applied to them before. You have admitted the fitness of my expression "paternal government": it only has been, and remains, a question between us, how far such government should extend. Perhaps you would like it only to regulate, among the children, the length of their lessons; and perhaps I should like it also to regulate the hardness of their cricket-balls: but cannot you wait quietly till you know what I want it to do, before quarrelling with the thing itself?

O.: No; I cannot wait quietly: in fact I don't see any use in beginning such a discussion at all, because I am quite sure from the first, that you want to meddle with things that you have no business with, and to interfere with healthy liberty of action in all sorts of ways; and I know that you can't propose any laws that would be of real use.*

R.: If you indeed know that, you would be wrong to hear me any farther. But if you are only in painful doubt about me, which makes you unwilling to run the risk of wasting your time, I will tell you beforehand what I really do think about this same liberty of action, namely, that whenever we can make a perfectly equitable law about any matter, or even a law securing, on the whole, more just conduct than unjust, we ought to make that law; and that there will

* If the reader is displeased with me for putting this foolish speech into his mouth, I entreat his pardon: but he may be assured that it is a speech which would be made by many people, and the substance of which would be tacitly felt by many more, at this point of the discussion. I have really tried, up to this point, to make the objector as intelligent a person as it is possible for an author to imagine anybody to be, who differs with him.

yet, on these conditions, always remain a number of matters respecting which legalism and formalism are impossible; enough, and more than enough, to exercise all human powers of individual judgment, and afford all kinds of scope to individual character. I think this; but of course it can only be proved by separate examination of the possibilities of formal restraint in each given field of action; and these two lectures are nothing more than a sketch of such a detailed examination in one field, namely, that of art. You will find, however, one or two other remarks on such possibilities in the next note.

NOTE 2ND, p. 29: "*Right to public support.*"

It did not appear to me desirable, in the course of the spoken lecture, to enter into details or offer suggestions on the questions of the regulation of labour and distribution of relief, as it would have been impossible to do so without touching on many disputed or disputable points, not easily handled before a general audience. But I must now supply what is wanting to make my general statement clear.

I believe, in the first place, that no Christian nation has any business to see one of its members in distress without helping him, though, perhaps, at the same time punishing him : help, of course—in nine cases out of ten—meaning guidance, much more than gift, and, therefore, interference with liberty. When a peasant mother sees one of her careless children fall into a ditch, her first proceeding is to pull him out ; her second, to box his ears ; her third, ordinarily, to lead him carefully a little way by the hand, or send him home for the rest of the day. The child usually cries, and very often would clearly prefer remaining in the ditch ; and if he understood any of the terms of politics, would certainly express resentment at the interference with his individual liberty : but the mother has done her duty. Whereas the usual call of the mother nation to any of her children, under such circumstances, has lately been nothing more than the fox-hunter's : "Stay still there ; I shall clear you." And if we always *could* clear them, their requests to be left in muddy independence might be sometimes allowed by kind people, or their cries for help disdained by unkind ones. But we can't

clear them. The whole nation is, in fact, bound together, as men are by ropes on a glacier—if one falls, the rest must either lift him or drag him along with them * as dead weight, not without much increase of danger to themselves. And the law of right being manifestly in this, as, whether manifestly or not, it is always, the law of prudence, the only question is, how this wholesome help and interference are to be administered.

The first interference should be in education. In order that men may be able to support themselves when they are grown, their strength must be properly developed while they are young; and the state should always see to this—not allowing their health to be broken by too early labour, nor their powers to be wasted for want of knowledge. Some questions connected with this matter are noticed farther on under the head “trial schools”: one point I

* It is very curious to watch the efforts of two shopkeepers to ruin each other, neither having the least idea that his ruined neighbour must eventually be supported at his own expense, with an increase of poor rates: and that the contest between them is not in reality which shall get everything for himself, but which shall first take upon himself and his customers the gratuitous maintenance of the other's family.

must notice here, that I believe all youths of whatever rank, ought to learn some manual trade thoroughly; for it is quite wonderful how much a man's views of life are cleared by the attainment of the capacity of doing any one thing well with his hands and arms. For a long time, what right life there was in the upper classes of Europe depended in no small degree on the necessity which each man was under of being able to fence; at this day, the most useful things which boys learn at public schools are, I believe, riding, rowing, and cricketing. But it would be far better that members of Parliament should be able to plough straight, and make a horseshoe, than only to feather oars neatly or point their toes prettily in stirrups. Then, in literary and scientific teaching, the great point of economy is to give the discipline of it through knowledge which will immediately bear on practical life. Our literary work has long been economically useless to us because too much concerned with dead languages; and our scientific work will yet, for some time, be a good deal lost, because scientific men are too fond or too vain of their systems, and waste

the student's time in endeavouring to give him large views, and make him perceive interesting connections of facts; when there is not one student, no, nor one man, in a thousand, who can feel the beauty of a system, or even take it clearly into his head; but nearly all men can understand, and most will be interested in, the facts which bear on daily life. Botanists have discovered some wonderful connections between nettles and figs, which a cowboy who will never see a ripe fig in his life need not be at all troubled about; but it will be interesting to him to know what effect nettles have on hay, and what taste they will give to porridge; and it will give him nearly a new life if he can be got but once, in a spring time, to look well at the beautiful circlet of the white nettle blossom, and work out with his schoolmaster the curves of its petals, and the way it is set on its central mast. So, the principle of chemical equivalents, beautiful as it is, matters far less to a peasant boy, and even to most sons of gentlemen, than their knowing how to find whether the water is wholesome in the back-kitchen cistern, or whether the seven-acre field wants sand or chalk

Having, then, directed the studies of our youth so as to make them practically serviceable men at the time of their entrance into life, that entrance should always be ready for them in cases where their private circumstances present no opening. There ought to be government establishments for every trade, in which all youths who desired it should be received as apprentices on their leaving school; and men thrown out of work received at all times. At these government manufactories the discipline should be strict, and the wages steady, not varying at all in proportion to the demand for the article, but only in proportion to the price of food; the commodities produced being laid up in store to meet sudden demands, and sudden fluctuations in prices prevented:—that gradual and necessary fluctuation only being allowed which is properly consequent on larger or more limited supply of raw material and other natural causes. When there was a visible tendency to produce a glut of any commodity, that tendency should be checked by directing the youth at the government schools into other trades; and the yearly surplus of commodities should be the

principal means of government provision for the poor. That provision should be large, and not disgraceful to them. At present there are very strange notions in the public mind respecting the receiving of alms: most people are willing to take them in the form of a pension from government, but unwilling to take them in the form of a pension from their parishes. There may be some reason for this singular prejudice, in the fact of the government pension being usually given as a definite acknowledgment of some service done to the country; but the parish pension is, or ought to be, given precisely on the same terms. A labourer serves his country with his spade, just as a man in the middle ranks of life serves it with his sword, pen, or lancet: if the service is less, and therefore the wages during health less, then the reward, when health is broken, may be less, but not, therefore, less honourable; and it ought to be quite as natural and straightforward a matter for a labourer to take his pension from his parish, because he has deserved well of his parish, as for a man in higher rank to take his pension from his country, because he has deserved well of his

country. If there be any disgrace in coming to the parish, because it may imply improvidence in early life, much more is there disgrace in coming to the government: since improvidence is far less justifiable in a highly educated than in an imperfectly educated man; and far less justifiable in a high rank, where extravagance must have been luxury, than in a low rank, where it may only have been comfort. So that the real fact of the matter is, that people will take alms delightedly, consisting of a carriage and footmen, because those do not look like alms to the people in the street; but they will not take alms consisting only of bread and water and coals, because everybody would understand what those meant. Mind, I do not want any one to refuse the carriage who ought to have it; but neither do I want them to refuse the coals. I should indeed be sorry if any change in our views on these subjects involved the least lessening of self-dependence in the English mind: but the common shrinking of men from the acceptance of public charity is not self-dependence, but mere base and selfish pride. It is not that they are unwilling to live at their

neighbours' expense, but that they are unwilling to confess they do: it is not dependence they wish to avoid, but gratitude. They will take places in which they know there is nothing to be done—they will borrow money they know they cannot repay—they will carry on a losing business with other people's capital—they will cheat the public in their shops, or sponge on their friends at their houses; but to say plainly they are poor men, who need the nation's help, and go into an almshouse—this they loftily repudiate, and virtuously prefer being thieves to being paupers.

I trust that these deceptive efforts of dishonest men to appear independent, and the agonising efforts of unfortunate men to remain independent, may both be in some degree checked by a better administration and understanding of laws respecting the poor. But the ordinances for relief and the ordinances for labour must go together; otherwise distress caused by misfortune will always be confounded, as it is now, with distress caused by idleness, unthrift, and fraud. It is only when the state watches and guides the middle life of men, that it can, without

disgrace to them, protect their old age, acknowledging in that protection that they have done their duty, or at least some portion of their duty, in better days.

I know well how strange, fanciful, or impracticable these suggestions will appear to most of the business men of this day ; men who conceive the proper state of the world to be simply that of a vast and disorganised mob, scrambling each for what he can get, trampling down its children and old men in the mire, and doing what work it finds *must* be done with any irregular squad of labourers it can bribe or inveigle together, and afterwards scatter to starvation. A great deal may, indeed, be done in this way by a nation strong-elbowed and strong-hearted as we are — not easily frightened by pushing, nor discouraged by falls. But it is still not the right way of doing things, for people who call themselves Christians. Every so-named soul of man claims from every other such soul, protection and education in childhood—help or punishment in middle life.—reward or relief, if needed, in old age ; all of these should be completely and unstintingly

given; and they can only be given by the organisation of such a system as I have described.

NOTE 3rd, p. 35 : "*Trial Schools.*"

It may be seriously questioned by the reader how much of painting talent we really lose on our present system,* and how much we should

* It will be observed that, in the lecture, it is *assumed* that works of art are national treasures: and that it is desirable to withdraw all the hands capable of painting or carving from other employments, in order that they may produce this kind of wealth. I do not, in assuming this, mean that works of art add to the monetary resources of a nation, or form part of its wealth, in the vulgar sense. The result of the sale of a picture in the country itself is merely that a certain sum of money is transferred from the hands of B. the purchaser, to those of A. the producer; the sum ultimately to be distributed remaining the same, only A. ultimately spending it instead of B., while the labour of A. has been in the meantime withdrawn from productive channels: he has painted a picture which nobody can live upon, or live in, when he might have grown corn or built houses; when the sale therefore is effected in the country itself, it does not add to, but diminishes, the monetary resources of the country, except only so far as it may appear probable, on other grounds, that A. is likely to spend the sum he receives for his picture more rationally and usefully than B. would have spent it. If, indeed, the picture, or other work of art, be sold in foreign countries, either the

gain by the proposed trial schools. For it might be thought, that as matters stand at present, we have more painters than we ought to have, having so many bad ones, and that all youths who had true painters' genius forced their way out of obscurity.

money or the useful products of the foreign country being imported in exchange for it, such sale adds to the monetary resources of the selling, and diminishes those of the purchasing nation. But sound political economy, strange as it may at first appear to say so, has nothing whatever to do with separations between national interests. Political economy means the management of the affairs of *citizens*; and it either regards exclusively the administration of the affairs of one nation, or the administration of the affairs of the world considered as one nation. So when a transaction between individuals which enriches A., impoverishes B. in precisely the same degree, the sound economist considers it an unproductive transaction between the individuals: and if a trade between two nations which enriches one, impoverishes the other in the same degree, the sound economist considers it an unproductive trade between the nations. It is not a general question of political economy, but only a particular question of local expediency, whether an article in itself valueless, may bear a value of exchange in transactions with some other nation. The economist considers only the actual value of the thing done or produced: and if he sees a quantity of labour spent, for instance, by the Swiss, in producing wood-work for sale to the English, he at once sets the commercial impoverishment of the English purchaser against the

This is not so. It is difficult to analyse the characters of mind which cause youths to mistake their vocation, and to endeavour to become artists, when they have no true artist's gift. But the fact is, that multitudes of young

commercial enrichment of the Swiss seller: and considers the whole transaction productive only so far as the woodwork itself is a real addition to the wealth of the world. For the arrangement of the laws of a nation so as to procure the greatest advantages to itself, and leave the smallest advantages to other nations, is not a part of the science of political economy, but merely a broad application of the science of fraud. Considered thus in the abstract, pictures are not an *addition to the monetary wealth of the world*, except in the amount of pleasure or instruction to be got out of them day by day; but there is a certain protective effect on wealth exercised by works of high art which must always be included in the estimate of their value. Generally speaking, persons who decorate their houses with pictures, will not spend so much money in papers, carpets, curtains, or other expensive and perishable luxuries as they would otherwise. Works of good art, like books, exercise a conservative effect on the rooms they are kept in: and the wall of the library or picture gallery remains undisturbed, when those of other rooms are re-papered or re-panelled. Of course this effect is still more definite when the picture is on the walls themselves, either on canvas stretched into fixed shapes on their panels, or in fresco: involving, of course, the preservation of the building from all unnecessary and capricious alteration. And generally speaking, the occupation of a large number of hands in painting or sculpture in any nation may be considered as tending to check

men do this, and that by far the greater number of living artists are men who have mistaken their vocation. The peculiar circumstances of modern life, which exhibit art in almost every form to the sight of the youths in our great cities, have a natural tendency to fill their imaginations with borrowed ideas, and their minds with imperfect science; the mere dislike of mechanical employments, either felt to be irksome, or believed to be degrading, urges numbers of young men to become painters, in the same temper in which they would enlist or go to sea; others, the sons of engravers or artists, taught the business of the art by their parents, and having no gift for it themselves, follow it as the means of livelihood, in an ignoble patience; or, if ambitious, seek to attract regard, or distance rivalry, by fantastic,

the disposition to indulge in perishable luxury. I do not, however, in my assumption that works of art are treasures, take much into consideration this collateral monetary result. I consider them treasures, merely as permanent means of pleasure and instruction: and having at other times tried to show the several ways in which they can please and teach, assume here that they are thus useful; and that it is desirable to make as many painters as we can.

meretricious, or unprecedented applications of their mechanical skill ; while finally, many men earnest in feeling, and conscientious in principle, mistake their desire to be useful for a love of art, and their quickness of emotion for its capacity, and pass their lives in painting moral and instructive pictures, which might almost justify us in thinking nobody could be a painter but a rogue. On the other hand, I believe that much of the best artistical intellect is daily lost in other avocations. Generally, the temper which would make an admirable artist is humble and observant, capable of taking much interest in little things, and of entertaining itself pleasantly in the dullest circumstances. Suppose, added to these characters, a steady conscientiousness which seeks to do its duty wherever it may be placed, and the power, denied to few artistical minds, of ingenious invention in almost any practical department of human skill, and it can hardly be doubted that the very humility and conscientiousness which would have perfected the painter, have in many instances prevented his becoming one ; and that in the quiet life of our steady craftsmen—

sagacious manufacturers, and uncomplaining clerks — there may frequently be concealed more genius than ever is raised to the direction of our public works, or to be the mark of our public praises.

It is indeed probable, that intense disposition for art will conquer the most formidable obstacles, if the surrounding circumstances are such as at all to present the idea of such conquest to the mind ; but we have no ground for concluding that Giotto would ever have been more than a shepherd, if Cimabue had not by chance found him drawing ; or that among the shepherds of the Apennines there were no other Giottos, undiscovered by Cimabue. We are too much in the habit of considering happy accidents as what are called “special Providences” ; and thinking that when any great work needs to be done, the man who is to do it will certainly be pointed out by Providence, be he shepherd or sea-boy ; and prepared for his work by all kinds of minor providences, in the best possible way. Whereas all the analogies of God’s operations in other matters prove the contrary of this ; we find that “of thousand seeds, He often brings but one

to bear," often not one; and the one seed which He appoints to bear is allowed to bear crude or perfect fruit according to the dealings of the husbandman with it. And there cannot be a doubt in the mind of any person accustomed to take broad and logical views of the world's history, that its events are ruled by Providence in precisely the same manner as its harvests; that the seeds of good and evil are broadcast among men, just as the seeds of thistles and fruits are; and that according to the force of our industry, and wisdom of our husbandry, the ground will bring forth to us figs or thistles. So that when it seems needed that a certain work should be done for the world, and no man is there to do it, we have no right to say that God did not wish it to be done; and therefore sent no man able to do it. The probability (if I wrote my own convictions, I should say certainty) is, that He sent many men, hundreds of men, able to do it; and that we have rejected them, or crushed them; by our previous folly of conduct or of institution, we have rendered it impossible to distinguish, or impossible to reach them; and when the need for them comes, and we suffer for the want of

them, it is not that God refuses to send us deliverers, and specially appoints all our consequent sufferings; but that He has sent, and we have refused, the deliverers; and the pain is then wrought out by His eternal law, as surely as famine is wrought out by eternal law for a nation which will neither plough nor sow. No less are we in error in supposing, as we so frequently do, that if a man be found, he is sure to be in all respects fitted for the work to be done, as the key is to the lock: and that every accident which happened in the forging him, only adapted him more truly to the wards. It is pitiful to hear historians beguiling themselves and their readers, by tracing in the early history of great men, the minor circumstances which fitted them for the work they did, without ever taking notice of the other circumstances which as assuredly unfitted them for it; so concluding that miraculous interposition prepared them in all points for everything, and that they did all that could have been desired or hoped for from them: whereas the certainty of the matter is that, throughout their lives, they were thwarted and corrupted by some things as certainly as they

were helped and disciplined by others; and that, in the kindest and most reverent view which can justly be taken of them, they were but poor mistaken creatures, struggling with a world more profoundly mistaken than they; assuredly sinned against, or sinning in thousands of ways, and bringing out at last a maimed result — not what they might or ought to have done, but all that could be done against the world's resistance, and in spite of their own sorrowful falsehood to themselves.

And this being so, it is the practical duty of a wise nation, first to withdraw, as far as may be, its youth from destructive influences; then to try its material as far as possible, and to lose the use of none that is good. I do not mean by "withdrawing from destructive influences" the keeping of youths out of trials; but the keeping them out of the way of things purely and absolutely mischievous. I do not mean that we should shade our green corn in all heat, and shelter it in all frost, but only that we should dyke out the inundation from it, and drive the fowls away from it. Let your youth labour and

suffer; but do not let it starve, nor steal, nor blaspheme.

It is not, of course, in my power here to enter into details of schemes of education; and it will be long before the results of experiments now in progress will give data for the solution of the most difficult questions connected with the subject, of which the principal one is the mode in which the chance of advancement in life is to be extended to all, and yet made compatible with contentment in the pursuit of lower avocations by those whose abilities do not qualify them for the higher. But the general principle of trial schools lies at the root of the matter—of schools, that is to say, in which the knowledge offered and discipline enforced shall be all a part of a great assay of the human soul, and in which the one shall be increased, the other directed, as the tried heart and brain will best bear, and no otherwise. One thing, however, I must say, that in this trial I believe all emulation to be a false motive, and all giving of prizes a false means. All that you can depend upon in a boy, as significative of true power, likely to issue in good fruit, is his will to work for the

work's sake, not his desire to surpass his school-fellows; and the aim of the teaching you give him ought to be, to prove to him and strengthen in him his own separate gift, not to puff him into swollen rivalry with those who are everlastingly greater than he: still less ought you to hang favours and ribands about the neck of the creature who is the greatest, to make the rest envy him. Try to make them love him and follow him, not struggle with him.

There must, of course, be examination to ascertain and attest both progress and relative capacity; but our aim should be to make the students rather look upon it as a means of ascertaining their own true positions and powers in the world, than as an arena in which to carry away a present victory. I have not, perhaps, in the course of the lecture, insisted enough on the nature of relative capacity and individual character, as the roots of all real *value* in Art. We are too much in the habit, in these days, of acting as if Art worth a price in the market were a commodity which people could be generally taught to produce, and as if the *education* of the artist, not his *capacity*, gave the sterling

value to his work. No impression can possibly be more absurd or false. Whatever people can teach each other to do, they will estimate, and ought to estimate, only as common industry; nothing will ever fetch a high price but precisely that which cannot be taught, and which nobody can do but the man from whom it is purchased. No state of society, nor stage of knowledge, ever does away with the natural pre-eminence of one man over another; and it is that pre-eminence, and that only, which will give work high value in the market, or which ought to do so. It is a bad sign of the judgment, and bad omen for the progress, of a nation, if it supposes itself to possess many artists of equal merit. Noble art is nothing less than the expression of a great soul; and great souls are not common things. If ever we confound their work with that of others, it is not through liberality, but through blindness.

NOTE 4th, p. 36: "*Public Favour.*"

There is great difficulty in making any short or general statement of the difference between

great and ignoble minds in their behaviour to the "public." It is by no means *universally* the case that a mean mind, as stated in the text, will bend itself to what you ask of it: on the contrary, there is one kind of mind, the meanest of all, which perpetually complains of the public, contemplates and proclaims itself as a "genius," refuses all wholesome discipline or humble office, and ends in miserable and revengeful ruin; also, the greatest minds are marked by nothing more distinctly than an inconceivable humility, and acceptance of work or instruction in any form, and from any quarter. They will learn from everybody, and do anything that anybody asks of them, so long as it involves only toil, or what other men would think degradation. But the point of quarrel, nevertheless, assuredly rises some day between the public and them, respecting some matter, not of humiliation, but of Fact. Your great man always at last comes to see something the public don't see. This something he will assuredly persist in asserting, whether with tongue or pencil, to be as *he* sees it, not as *they* see it; and all the world in a heap on the other side, will not get him to say other-

wise. Then, if the world objects to the saying, he may happen to get stoned or burned for it, but that does not in the least matter to him ; if the world has no particular objection to the saying, he may get leave to mutter it to himself till he dies, and be merely taken for an idiot ; that also does not matter to him—mutter it he will, according to what he perceives to be fact, and not at all according to the roaring of the walls of Red sea on the right hand or left of him. Hence the quarrel, sure at some time or other to be started between the public and him ; while your mean man, though he will spit and scratch spiritedly at the public, while it does not attend to him, will bow to it for its clap in any direction, and say anything when he has got its ear, which he thinks will bring him another clap ; and thus, as stated in the text, he and it go on smoothly together.

There are, however, times when the obstinacy of the mean man looks very like the obstinacy of the great one ; but if you look closely into the matter, you will always see that the obstinacy of the first is in the pronounciation of " I " ; and of the second, in the pronounciation of " It."

NOTE 5th, p. 63: "*Invention of New Wants.*"

It would have been impossible for political economists long to have endured the error spoken of in the text,* had they not been confused by an idea, in part well founded, that the energies and refinements, as well as the riches of civilised life arose from imaginary wants. It is

* I have given the political economists too much credit in saying this. Actually, while these sheets are passing through the press, the blunt, broad, unmitigated fallacy is enunciated, formally and precisely, by the common councilmen of New York, in their report on the present commercial crisis. Here is their collective opinion, published in the *Times* of November 23rd, 1857:—"Another erroneous idea is that luxurious living, extravagant dressing, splendid turn-outs and fine houses, are the cause of distress to a nation. No more erroneous impression could exist. Every extravagance that the man of 100,000 or 1,000,000 dollars indulges in adds to the means, the support, the wealth of ten or a hundred who had little or nothing else but their labour, their intellect, or their taste. If a man of 1,000,000 dollars spends principal and interest in ten years, and finds himself beggared at the end of that time, he has actually made a hundred who have catered to his extravagance, employers or employed, so much richer by the division of his wealth. He may be ruined, but the nation

quite true, that the savage who knows no needs but those of food, shelter, and sleep, and after he has snared his venison and patched the rents of his hut, passes the rest of his time in animal repose, is in a lower state than the man who labours incessantly that he may procure for himself the luxuries of civilisation; and true also, that the difference between one and another nation in progressive power depends in great part on vain desires; but these idle motives are merely to be considered as giving exercise to the national body and mind; they are not sources of wealth, except so far as they give the habits of industry

is better off and richer, for one hundred minds and hands, with 10,000 dollars apiece, are far more productive than one with the whole."

Yes, gentlemen of the common council: but what has been doing in the time of the transfer? The spending of the fortune has taken a certain number of years (suppose ten), and during that time 1,000,000 dollars worth of work has been done by the people, who have been paid that sum for it. Where is the product of that work? By your own statement, wholly consumed; for the man for whom it has been done is now a beggar. You have given therefore, as a nation, 1,000,000 dollars worth of work, and ten years of time, and you have produced, as ultimate result, one beggar. Excellent economy,

and acquisitiveness. If a boy is clumsy and lazy, we shall do good if we can persuade him to carve cherry-stones and fly kites; and this use of his fingers and limbs may eventually be the cause of his becoming a wealthy and happy man; but we must not therefore argue that cherry-stones are valuable property, or that kite-flying is a profitable mode of passing time. In like manner, a nation always wastes its time and labour *directly*, when it invents a new want of a frivolous kind, and yet the invention of such a want may be the sign of a healthy activity, and the labour undergone to satisfy the new want may lead, *indirectly*, to useful discoveries or to noble arts; so that a gentlemen! and sure to conduce, in due sequence, to the production of *more* than one beggar. Perhaps the matter may be made clearer to you, however, by a more familiar instance. If a schoolboy goes out in the morning with five shillings in his pocket, and comes home at night penniless, having spent his all in tarts, principal and interest are gone, and fruiterer and baker are enriched. So far so good. But suppose the schoolboy, instead, has bought a book and a knife: principal and interest are gone, and bookseller and cutler are enriched. But the schoolboy is enriched also, and may help his schoolfellows next day with knife and book, instead of lying in bed and incurring a debt to the doctor.

nation is not to be discouraged in its fancies when it is either too weak or foolish to be moved to exertion by anything but fancies, or has attended to its serious business first. If a nation will not forge iron, but likes distilling lavender, by all means give it lavender to distil; only do not let its economists suppose that lavender is as profitable to it as oats, or that it helps poor people to live, any more than the schoolboy's kite provides him his dinner. Luxuries, whether national or personal, must be paid for by labour withdrawn from useful things; and no nation has a right to indulge in them until all its poor are comfortably housed and fed.

The enervating influence of luxury, and its tendencies to increase vice, are points which I keep entirely out of consideration in the present essay: but, so far as they bear on any question discussed, they merely furnish additional evidence on the side which I have taken. Thus, in the present case, I assume that the luxuries of civilised life are in possession harmless, and in acquirement, serviceable as a motive for exertion; and even on these favourable terms, we arrive at the conclusion that the nation ought not to

indulge in them except under severe limitations. Much less ought it to indulge in them if the temptation consequent on their possession, or fatality, incident to their manufacture, more than counterbalances the good done by the effort to obtain them.

NOTE 6th, p. 85 : "*Economy of Literature.*"

I have been much impressed lately by one of the results of the quantity of our books ; namely, the stern impossibility of getting anything understood, that required patience to understand. I observe always, in the case of my own writings, that if ever I state anything which has cost me any trouble to ascertain, and which, therefore, will probably require a minute or two of reflection from the reader before it can be accepted—that statement will not only be misunderstood, but in all probability taken to mean something very nearly the reverse of what it does mean. Now, whatever faults there may be in my modes of expression, I know that the words I use will always be found, by Johnson's dictionary, to bear, first of all, the sense I use them in ; and that the sentences, whether awkwardly turned or not, will, by the ordinary rules of grammar, bear no other interpretation than that I mean them to bear ; so that the misunderstanding of them must result, ultimately, from the mere fact that their matter sometimes requires a little patience.

And I see the same kind of misinterpretation put on the words of other writers, whenever they require the same kind of thought.

I was at first a little despondent about this; but, on the whole, I believe it will have a good effect upon our literature for some time to come; and then, perhaps, the public may recover its patience again. For certainly it is excellent discipline for an author to feel that he must say all he has to say in the fewest possible words, or his reader is sure to skip them; and in the plainest possible words, or his reader will certainly misunderstand them. Generally, also, a downright fact may be told in a plain way; and we want downright facts at present more than anything else. And though I often hear moral people complaining of the bad effects of want of thought, for my part, it seems to me that one of the worst diseases to which the human creature is liable is its disease of thinking. If it would only just *look** at a thing instead of

* There can be no question, however, of the mischievous tendency of the hurry of the present day, in the way people undertake this very *looking*. I gave three years' close and incessant labour to the examination of the chronology of the

thinking what it must be like, or *do* a thing, instead of thinking it cannot be done, we should all get on far better.

architecture of Venice; two long winters being wholly spent in the drawing of details on the spot; and yet I see constantly that architects who pass three or four days in a gondola going up and down the grand canal, think that their first impressions are just as likely to be true as my patiently wrought conclusions. Mr. Street, for instance, glances hastily at the façade of the Ducal Palace—so hastily that he does not even see what its pattern is, and misses the alternation of red and black in the centres of its squares—and yet he instantly ventures on an opinion on the chronology of its capitals, which is one of the most complicated and difficult subjects in the whole range of Gothic archæology. It may, nevertheless, be ascertained with very fair probability of correctness by any person who will give a month's hard work to it, but it can be ascertained no otherwise.

NOTE 7th, p. 157 : "*Pilots of the State.*"

While, however, undoubtedly, these responsibilities attach to every person possessed of wealth, it is necessary both to avoid any stringency of statement respecting the benevolent modes of spending money, and to admit and approve so much liberty of spending it for selfish pleasures as may distinctly make wealth a personal *reward* for toil, and secure in the minds of all men the right of property. For although, without doubt, the purest pleasures it can procure are not selfish, it is only as a means of personal gratification that it will be desired by a large majority of workers; and it would be no less false ethics than false policy to check their energy by any forms of public opinion which bore hardly against the wanton expenditure of honestly got wealth. It would be hard if a man who had passed the greater part of his life at the desk or counter could not at last innocently gratify a caprice; and all the best and most sacred ends of almsgiving would be at once disappointed, if the idea of a moral

claim took the place of affectionate gratitude in the mind of the receiver.

Some distinction is made by us naturally in this respect between earned and inherited wealth ; that which is inherited appearing to involve the most definite responsibilities, especially when consisting in revenues derived from the soil. The form of taxation which constitutes rental of lands places annually a certain portion of the national wealth in the hands of the nobles, or other proprietors of the soil, under conditions peculiarly calculated to induce them to give their best care to its efficient administration. The want of instruction in even the simplest principles of commerce and economy, which hitherto has disgraced our schools and universities, has indeed been the cause of ruin or total inutility of life to multitudes of our men of estate ; but this deficiency in our public education cannot exist much longer, and it appears to be highly advantageous for the State that a certain number of persons distinguished by race should be permitted to set examples of wise expenditure, whether in the advancement of science, or in patronage of art

and literature; only they must see to it that they take their right standing more firmly than they have done hitherto, for the position of a rich man in relation to those around him is, in our present real life, and is also contemplated generally by political economists as being, precisely the reverse of what it ought to be. A rich man ought to be continually examining how he may spend his money for the advantage of others; at present, others are continually plotting how they may beguile him into spending it apparently for his own. The aspect which he presents to the eyes of the world is generally that of a person holding a bag of money with a staunch grasp, and resolved to part with none of it unless he is forced, and all the people about him are plotting how they may force him; that is to say, how they may persuade him that he wants this thing or that; or how they may produce things that he will covet and buy. One man tries to persuade him that he wants perfumes; another that he wants jewellery; another that he wants sugar-plums; another that he wants roses at Christmas. Anybody who can invent a new want for him is supposed

to be a benefactor to society: and thus the energies of the poorer people about him are continually directed to the production of covetable, instead of serviceable things; and the rich man has the general aspect of a fool, plotted against by all the world. Whereas the real aspect which he ought to have is that of a person wiser than others, entrusted with the management of a larger quantity of capital, which he administers for the profit of all, directing each man to the labour which is most healthy for him, and most serviceable for the community.

NOTE 8th, p. 158: "*Silk and Purple.*"

In various places throughout these lectures I have had to allude to the distinction between productive and unproductive labour, and between true and false wealth. I shall here endeavour, as clearly as I can, to explain the distinction I mean.

Property may be divided generally into two kinds; that which produces life, and that which produces the objects of life. That which produces or maintains life consists of food, in so far as it is nourishing; of furniture and clothing, in so far as they are protective or cherishing; of fuel; and of all land, instruments, or materials, necessary to produce food, houses, clothes, and fuel. It is specially and rightly called useful property.

The property which produces the objects of life consists of all that gives pleasure or suggests and preserves thought: of food, furniture, and land, in so far as they are pleasing to the appetite or the eye; of luxurious dress; and all other kinds of luxuries; of books, pictures, and

architecture. But the modes of connection of certain minor forms of property with human labour render it desirable to arrange them under more than these two heads. Property may therefore be conveniently considered as of five kinds.

1. Property necessary to life, but not producible by labour, and therefore belonging of right, in a due measure, to every human being as soon as he is born, and morally unalienable. As for instance, his proper share of the atmosphere, without which he cannot breathe, and of water, which he needs to quench his thirst. As much land as he needs to feed from is also unalienable; but in well-regulated communities this quantity of land may often be represented by other possessions, or its need supplied by wages and privileges.

2. Property necessary to life, but only producible by labour, and of which the possession is morally connected with labour, so that no person capable of doing the work necessary for its production has a right to it until he has done that work—"he that will not work, neither should he eat." It consists of simple food, clothing,

and habitation, with their seeds and materials, or instruments and machinery, and animals used for necessary draught or locomotion, etc. It is to be observed of this kind of property, that its increase cannot usually be carried beyond a certain point, because it depends not on labour only, but on things of which the supply is limited by nature. The possible accumulation of corn depends on the quantity of corn-growing land possessed or commercially accessible; and that of steel, similarly, on the accessible quantity of coal and ironstone. It follows from this natural limitation of supply that the accumulation of property of this kind in large masses at one point, or in one person's hands, commonly involves, more or less, the scarcity of it at another point and in other persons' hands; so that the accidents or energies which may enable one man to procure a great deal of it, may, and in all likelihood will, partially prevent other men procuring a sufficiency of it, however willing they may be to work for it; therefore, the modes of its accumulation and distribution need to be in some degree regulated by law and by national treaties, in order to secure justice to all men.

Another point requiring notice respecting this sort of property is, that no work can be wasted in producing it, provided only the kind of it produced be preservable and distributable, since for every grain of such commodities we produce we are rendering so much more life possible on earth.* But though we are sure, thus, that we are employing people well, we cannot be sure we might not have employed them *better*; for it

* This point has sometimes been disputed; for instance, opening Mill's "Political Economy" the other day, I chanced on a passage in which he says that a man who makes a coat, if the person who wears the coat does nothing useful while he wears it, has done no more good to society than the man who has only raised a pine apple. But this is a fallacy induced by endeavour after too much subtlety. None of us have a right to say that the life of a man is of no use to *him*, though it may be of no use to *us*; and the man who made the coat, and thereby prolonged another man's life, has done a gracious and useful work, whatever may come of the life so prolonged. We may say to the wearer of the coat, "You who are wearing coats, and doing nothing in them, are at present wasting your own life and other people's"; but we have no right to say that his existence, however wasted, is wasted *away*. It may be just dragging itself on, in its thin golden line, with nothing dependent upon it, to the point where it is to strengthen into good chain cable, and have thousands of other lives dependent on it. Meantime, the simple fact respecting the coat maker is, he that has given so much life to the creature, the results of

is possible to direct labour to the production of life, until little or none is left for that of the objects of life, and thus to increase population at the expense of civilisation, learning, and morality: on the other hand, it is just as possible—and the error is one to which the world is, on the whole, more liable—to direct labour to the objects of life till too little is left for life, and thus to increase luxury or learning at the expense of population. Right political economy holds its aim poised justly between the two extremes, desiring neither to crowd its dominions with a race of savages, nor to found courts and colleges in the midst of a desert.

3. The third kind of property is that which conduces to bodily pleasures and conveniences, without directly tending to sustain life; perhaps sometimes indirectly tending to destroy it. All dainty (as distinguished from nourishing) food, and means of producing it; all scents not needed

which he cannot calculate; they may be—in all probability will be—infinite results in some way. But the raiser of pines, who has only given a pleasant taste in the mouth to some one, may see with tolerable clearness to the end of the taste in the mouth, and of all conceivable results therefrom.

for health; substances valued only for their appearance and rarity (as gold and jewels); flowers of difficult culture; animals used for delight (as horses for racing), and such like, form property of this class; to which the term "luxury or luxuries" ought exclusively to belong.

Respecting which we have to note, first, that all such property is of doubtful advantage even to its possessor. Furniture tempting to indolence, sweet odours, and luscious food, are more or less injurious to health: while jewels, liveries, and other such common belongings of wealthy people, certainly convey no pleasure to their owners proportionate to their cost.

Further, such property, for the most part, perishes in the using. Jewels form a great exception—but rich food, fine dresses, horses and carriages, are consumed by the owner's use. It ought much oftener to be brought to the notice of rich men what sums of interest of money they are paying towards the close of their lives, for luxuries consumed in the middle of them. It would be very interesting, for instance, to know the exact sum which the

money spent in London for ices, at its desserts and balls, during the last twenty years, had it been saved and put out at compound interest, would at this moment have furnished for useful purposes.

Also, in most cases, the enjoyment of such property is wholly selfish, and limited to its possessor. Splendid dress and equipage, however, when so arranged as to produce real beauty of effect, may often be rather a generous than a selfish channel of expenditure. They will, however, necessarily in such case involve some of the arts of design; and therefore take their place in a higher category than that of luxuries merely.

4. The fourth kind of property is that which bestows intellectual or emotional pleasure, consisting of land set apart for purposes of delight more than for agriculture, of books, works of art, and objects of natural history.

It is, of course, impossible to fix an accurate limit between property of the last class and of this class, since things which are a mere luxury to one person are a means of intellectual occupation to another. Flowers in a London ball-room

are a luxury ; in a botanical garden, a delight of the intellect, and in their native fields, both ; while the most noble works of art are continually made material of vulgar luxury or of criminal pride ; but, when rightly used, property of this fourth class is the only kind which deserves the name of *real* property ; it is the only kind which a man can truly be said to “possess.” What a man eats, or drinks, or wears, so long as it is only what is needful for life, can no more be thought of as his possession than the air he breathes. The air is as needful to him as the food ; but we do not talk of a man’s wealth of air, and what food or clothing a man possesses more than he himself requires must be for others to use (and, to him, therefore, not a real property in itself, but only a means of obtaining some real property in exchange for it). Whereas the things that give intellectual or emotional enjoyment may be accumulated and do not perish in using ; but continually supply new pleasures and new powers of giving pleasures to others. And these, therefore, are the only things which can rightly be thought of as giving “wealth” or “well being.” Food conduces only

to "being," but these to "*well* being." And there is not any broader general distinction between lower and higher orders of men than rests on their possession of this real property. The human race may be properly divided by zoologists into "men who have gardens, libraries, or works of art; and who have none;" and the former class will include all noble persons, except only a few who make the world their garden or museum; while the people who have not, or, which is the same thing, do not care for gardens or libraries, but care for nothing but money or luxuries, will include none but ignoble persons: only it is necessary to understand that I mean by the term "garden" as much the Carthusian's plot of ground fifteen feet square between his monastery buttresses, as I do the grounds of Chatsworth or Kew; and I mean by the term "art" as much the old sailor's print of the *Arethusa* bearing up to engage the *Belle Poule*, as I do Raphael's "*Disputa*," and even rather more; for, when abundant, beautiful possessions of this kind are almost always associated with vulgar luxury, and become then anything but indicative of noble character in their possessors.

216 POLITICAL ECONOMY OF ART.

The ideal of human life is a union of Spartan simplicity of manners with Athenian sensibility and imagination, but in actual results, we are continually mistaking ignorance for simplicity, and sensuality for refinement.

5. The fifth kind of property is representative property, consisting of documents or money, or rather documents only, for money itself is only a transferable document, current among societies of men, giving claim, at sight, to some definite benefit or advantage, most commonly to a certain share of real property existing in those societies. The money is only genuine when the property it gives claim to is real, or the advantages it gives claim to certain ; otherwise, it is false money, and may be considered as much "forged" when issued by a government, or a bank, as when by an individual. Thus, if a dozen of men, cast ashore on a desert island, pick up a number of stones, put a red spot on each stone, and pass a law that every stone marked with a red spot shall give claim to a peck of wheat—so long as no wheat exists, or can exist on the island, the stones are not money. But the moment as much wheat exists as shall render it possible

for the society always to give a peck for every spotted stone, the spotted stones would become money, and might be exchanged by their possessors for whatever other commodities they chose, to the value of the peck of wheat which the stones represented. If more stones were issued than the quantity of wheat could answer the demand of, the value of the stone coinage would be depreciated, in proportion to its increase above the quantity needed to answer it.

Again, supposing a certain number of the men so cast ashore were set aside by lot, or any other convention, to do the rougher labour necessary for the whole society, they themselves being maintained by the daily allotment of a certain quantity of food, clothing, etc. Then, if it were agreed that the stones spotted with red should be signs of a Government order for the labour of these men; and that any person presenting a spotted stone at the office of the labourers, should be entitled to a man's work for a week or a day, the red stones would be money; and might—probably would—immediately pass current in the island for as much food, or clothing, or iron, or any other article as

a man's work for the period secured by the stone was worth. But if the Government issued so many spotted stones that it was impossible for the body of men they employed to comply with the orders; as, suppose, if they only employed twelve men, and issued eighteen spotted stones daily, ordering a day's work each, then the six extra stones would be forged or false money; and the effect of this forgery would be the depreciation of the value of the whole coinage by one-third, that being the period of shortcoming which would, on the average, necessarily ensue in the execution of each order. Much occasional work may be done in a state or society, by help of an issue of false money (or false promises) by way of stimulants; and the fruit of this work, if it comes into the promiser's hands, may sometimes enable the false promises at last to be fulfilled: hence the frequent issue of false money by governments and banks, and the not unfrequent escapes from the natural and proper consequences of such false issues, so as to cause a confused conception in most people's minds of what money really is. I am not sure whether some quantity

of such false issue may not really be permissible in a nation, accurately proportioned to the minimum average produce of the labour it excites ; but all such procedures are more or less unsound ; and the notion of unlimited issue of currency is simply one of the absurdest and most monstrous that ever came into disjointed human wits.

The use of objects of real or supposed value for currency, as gold, jewellery, etc., is barbarous ; and it always expresses either the measure of the distrust in the society of its own government, or the proportion of distrustful or barbarous nations with whom it has to deal. A metal not easily corroded or imitated, is a desirable medium of currency for the sake of cleanliness and convenience, but were it possible to prevent forgery, the more worthless the metal itself, the better. The use of worthless media, unrestrained by the use of valuable media, has always hitherto involved, and is therefore supposed to involve necessarily, unlimited, or at least improperly extended, issue ; but we might as well suppose that a man must necessarily issue unlimited promises because

his words cost nothing. Intercourse with foreign nations must, indeed, for ages yet to come, at the world's present rate of progress, be carried on by valuable currencies; but such transactions are nothing more than forms of barter. The gold used at present as a currency is not, in point of fact, currency at all, but the real property* which the currency gives claim to, stamped to measure its quantity, and mingling with the real currency occasionally by barter.

The evils necessarily resulting from the use of baseless currencies have been terribly illustrated while these sheets have been passing through the press; I have not had time to

* Or rather, equivalent to such real property, because everybody has been accustomed to look upon it as valuable; and therefore everybody is willing to give labour or goods for it. But real property does ultimately consist only in things that nourish body or mind; gold would be useless to us if we could not get mutton or books for it. Ultimately all commercial mistakes and embarrassments result from people expecting to get goods without working for them, or wasting them after they have got them. A nation which labours, and takes care of the fruits of labour, would be rich and happy; though there were no gold in the universe. A nation which is idle, and wastes the produce of what work it does, would be poor and miserable, though all its mountains were of gold, and had glens filled with diamond instead of glacier.

examine the various conditions of dishonest or absurd trading which have led to the late "panic" in America and England; this only I know, that no merchant deserving the name ought to be more liable to "panic" than a soldier should; for his name should never be on more paper than he can at any instant meet the call of, happen what will. I do not say this without feeling at the same time how difficult it is to mark, in existing commerce, the just limits between the spirit of enterprise and of speculation. Something of the same temper which makes the English soldier do always all that is possible, and attempt more than is possible, joins its influence with that of mere avarice in tempting the English merchant into risks which he cannot justify, and efforts which he cannot sustain; and the same passion for adventure which our travellers gratify every summer on perilous snow wreaths, and cloud-encompassed precipices, surrounds with a romantic fascination the glittering of a hollow investment, and gilds the clouds that curl round gulfs of ruin. Nay, a higher and a more serious feeling frequently mingles in

the motley temptation; and men apply themselves to the task of growing rich, as to a labour of providential appointment, from which they cannot pause without culpability, nor retire without dishonour. Our large trading cities bear to me very nearly the aspect of monastic establishments in which the roar of the mill-wheel and the crane takes the place of other devotional music; and in which the worship of Mammon or Moloch is conducted with a tender reverence and an exact propriety; the merchant rising to his Mammon matins with the self-denial of an anchorite, and expiating the frivolities into which he may be beguiled in the course of the day by late attendance at Mammon vespers. But, with every allowance that can be made for these conscientious and romantic persons, the fact remains the same, that by far the greater number of the transactions which lead to these times of commercial embarrassment may be ranged simply under two great heads—gambling and stealing; and both of these in their most culpable form, namely, gambling with money which is not ours, and stealing from those who trust us. I

have sometimes thought a day might come, when the nation would perceive that a well-educated man who steals a hundred thousand pounds, involving the entire means of subsistence of a hundred families, deserves, on the whole, as severe a punishment as an ill-educated man who steals a purse from a pocket, or a mug from a pantry. But without hoping for this excess of clear-sightedness, we may at least labour for a system of greater honesty and kindness in the minor commerce of our daily life; since the great dishonesty of the great buyers and sellers is nothing more than the natural growth and outcome from the little dishonesty of the little buyers and sellers. Every person who tries to buy an article for less than its proper value, or who tries to sell it at more than its proper value—every consumer who keeps a tradesman waiting for his money, and every tradesman who bribes a consumer to extravagance by credit, is helping forward, according to his own measure of power, a system of baseless and dishonourable commerce, and forcing his country down into poverty and shame. And people of moderate means and

average powers of mind would do far more real good by merely carrying out stern principles of justice and honesty in common matters of trade, than by the most ingenious schemes of extended philanthropy, or vociferous declarations of theological doctrine. There are three weighty matters of the law—justice, mercy, and truth; and of these the Teacher puts truth last because that cannot be known but by a course of acts of justice and love. But men put, in all their efforts, truth first, because they mean by it their own opinions; and thus, while the world has many people who would suffer martyrdom in the cause of what they call truth, it has few who will suffer even a little inconvenience in that of justice and mercy.
